A companion DVD includes video clips with over 60 minutes of footage demonstrating all the major joint actions of the human body. Companion DVD includes over one hour of video demonstrating all the major joint actions of the human body, with a voiceover explanation of the names of the motions, the planes in which motion occurs, and the axes around which motion occurs. Six chapters on joints cover structure, function, and terminology, with specific illustrations on each joint in the human body: joints of

the axial body, joints of the upper extremity, and joints of the lower extremity. Student-friendly features in each chapter include an outline, learning objectives, overview, key terms with pronunciations, and word origins designating the Latin or Greek derivative. Expert author Joseph E. Muscolino, DC, offers years of experience in the study of muscles and muscle

More illustrations of individual muscles are included, with a description of their actions and attachments; muscles are now organized by function rather than by region.
