Which sort of seducer could you be? Siren? Rake? Cold Coquette? Star? Comedian? Charismatic? Or Saint? This book will show you which. Charm, persuasion, the ability to create illusions: these are some of the many dazzling gifts of the Seducer, the compelling figure who is able to manipulate, mislead and give pleasure all at once. When raised to the level of art, seduction, an indirect and subtle form of power, has toppled empires, won elections and enslaved great minds. In this beautiful, sensually designed book, Greene unearths the two sides of seduction: the characters and the process. Discover who you, or your pursuer, most resembles. Learn, too, the pitfalls of the anti-Seducer. Immerse yourself in the twenty-four manoeuvres and strategies of the seductive process, the ritual by which a seducer gains mastery over their target. Understand how to 'Choose the Right Victim', 'Appear to Be an Object of Desire' and 'Confuse Desire and Reality'. In

addition, Greene provides instruction on how to identify victims by type. Each fascinating character and each cunning tactic demonstrates a fundamental truth about who we are, and the targets we've become - or hope to win over. The Art of Seduction is an indispensable primer on the essence of one of history's greatest weapons and the ultimate power trip. From the internationally bestselling author of The 48 Laws of Power, Mastery, and The 33 Strategies Of War.

*Reality+: Virtual Worlds and the Problems of Philosophy*  
University of Nebraska Press

We don't have an energy crisis. We have a consumption crisis. And this book, which takes aim at cherished assumptions regarding energy, offers refreshingly straight talk about what's wrong with the way we think and talk about the problem. Though we generally believe we can solve environmental problems with more energy—more solar cells, wind turbines, and biofuels—alternative technologies come with their own side effects and limitations. How, for instance, do solar cells cause harm? Why can't engineers solve wind power's biggest obstacle? Why won't contraception solve the problem of overpopulation lying at the heart of our concerns about energy, and what will? This practical, environmentally informed, and lucid book persuasively argues for a change of perspective. If consumption is the problem, as Ozzie Zehner suggests, then we need to shift our focus from suspect alternative energies to improving social and political fundamentals: walkable communities, improved consumption, enlightened governance, and, most notably, women's rights. The dozens of first steps he offers are surprisingly straightforward. For instance, he introduces a simple sticker that promises a greater impact than all of the nation's solar cells. He uncovers why carbon taxes won't solve our energy challenges (and presents two taxes that could). Finally, he explores how future environmentalists will focus on similarly fresh alternatives that are affordable, clean, and can actually improve our well-being. Watch a book trailer.

**Illusions** Scholastic Inc.

*Illusions and Disillusions of Psychoanalytic Work* recounts and explores the disappointing and sometimes tragic evolutions of the treatments of certain patients who are resistant to the effects of analytic work. In this book the author reports cases taken from his own experience and that of his collaborators. The author points out moreover, that such cases have never been absent from the series of analysands that he has treated, from the early days of his practice up until today, without minimizing his counter-transference reactions or their possible impact on these disappointing evolutions.

**Illusions** Grove/Atlantic, Inc.

The art of optical illusion has been an integral part of painting since antiquity when it was used as a yardstick by which to judge an artist's level of mastery. This book presents a fascinating overview of the different methods of illusion practiced by artists over hundreds of years. Organised into five chapters - Optical Illusions, Distortions and Hidden Images, De-Figurations, Questioning Perception, and Overstepping Reality - it brings together artists from various time periods and disciplines.--  
*Green Delusions* Courier Corporation

A physician-anthropologist explores how public health practices--from epidemiological modeling to outbreak containment--help perpetuate global inequities. In *Epidemic Illusions*, Eugene Richardson, a physician and an anthropologist, contends that public health practices--from epidemiological modeling and outbreak containment to Big Data and causal inference--play an essential role in perpetuating a range of global inequities. Drawing on postcolonial theory, medical anthropology, and critical science studies, Richardson demonstrates the ways in which the flagship discipline of epidemiology has been shaped by the colonial, racist, and patriarchal system that had its inception in 1492.

*Illusions of Fate* Abrams

A man and a woman who thrive on danger and deception find explosive passion in this compelling novel where nothing is as it seems--from #1 New York Times bestselling author Nora Roberts. The daughter of a world-renowned magician, Roxy Nouvelle has inherited her father's talents--and his penchant for jewel thievery. Into this colorful world comes Luke Callahan, an escape artist who captures her heart--and keeps secrets that could shatter all her illusions...

*A Tree Grows in Brooklyn* Vintage

He stood on the ledge of the great Cauldarian range looking down at his hand in which he held a rock. The beauty of it was overpowering, it's green opaque luminescence made him feel falsely at ease. But he knew this was an object of beauty that no Cauldarian should possess. The stone represented the dark side of history. The ideological faith and power that emanated from it could also be used for good. But its efficacy was wielded as if it were a sword striking at every aspect of the populace's freedom. So far its thrust proved deadly in every instance. It had to be thrown over the ledge and into the night if his people were to survive. Michael had awakened from this same dream that he had many times before. It was as if it were only yesterday that his world had changed; it was different, but in many ways it was still the same...

**A Romance of the Tropical Forest** John Wiley & Sons

The world faces a climate crisis stretching deep into the 21st century and an ascendant far right. Are these trends related? How does the far right think about the environment, and what openings does the coming crisis present for them? This incisive new book traces the long history of far-right environmentalism and explores how it is adapting to the contemporary world. It argues that right-wing extremists, after years of denying the reality of climate change, are now showing serious signs of reversing their strategy. A new generation of far-right activists has recognised a convenient truth: the global climate crisis represents their best chance yet for a return to relevance. In reality, however, their noxious blend of conspiracy, hatred, and violence is no solution at all: it is the "eco-socialism of fools." Only a real commitment to climate justice can tackle the crisis we face and stop the far right in its tracks. No-one interested in the struggle against right-wing extremism and the crusade for climate justice can afford to miss this trenchant critique of burgeoning eco-fascism.

*The 48 Laws of Power* Penguin

The tranquility of Mars is disrupted by humans who want to conquer space, colonize the planet, and escape a doomed Earth. *The Origins of Power, Prosperity, and Poverty* Little, Brown  
"This disturbing but very important book makes clear we must dig deeper than the normal solutions we are offered."—Yvon Chouinard, founder of Patagonia Works "Bright Green Lies exposes the hypocrisy and bankruptcy of leading environmental groups and their most prominent cheerleaders. The best-known environmentalists are not in the business of speaking truth, or even holding up rational solutions to blunt the impending ecocide, but instead indulge in a mendacious and self-serving delusion that provides comfort at the expense of reality. They fail to state the obvious: We cannot continue to wallow in hedonistic consumption and industrial expansion and survive as a species. The environmental debate, Derrick Jensen and his coauthors argue, has been distorted by hubris and the childish desire by those in industrialized nations to sustain the unsustainable. All debates about environmental policy need to begin with honoring and protecting, not the desires of the human species, but with the sanctity of the Earth itself. We refuse to ask the right questions because these questions expose a stark truth—we cannot continue to live as we are living. To do so is suicidal folly. 'Tell me how you seek, and I will tell you what you are seeking,' the German philosopher Ludwig Wittgenstein said. This is the power of Bright Green Lies: It asks the questions most refuse to ask, and in that questioning, that seeking, uncovers profound truths we ignore at our peril."—Chris Hedges, Pulitzer Prize-winning journalist and author of *America: The Farewell Tour*  
*The Palace of Illusions* Prestel Pub

A leading philosopher takes a mind-bending journey through virtual worlds, illuminating the nature of reality and our place within it. Virtual reality is genuine reality; that's the central thesis of *Reality+*. In a highly original work of "technophilosophy," David J. Chalmers gives a compelling analysis of our technological future. He argues that virtual worlds are not second-class worlds, and that we can live a meaningful life in virtual reality. We may even be in a virtual world already. Along the way, Chalmers conducts a grand tour of big ideas in philosophy and science. He uses virtual reality technology to offer a new perspective on long-established philosophical questions. How do we know that there's an external world? Is there a god? What is the nature of reality? What's the relation between mind and body? How can we lead a good life? All of these questions are illuminated or transformed by Chalmers' mind-bending analysis. Studded with illustrations that bring philosophical issues to life, *Reality+* is a major statement that will shape discussion of philosophy, science, and technology for years to come.

*Of Green Illusions* John Wiley & Sons

Amoral, cunning, ruthless, and instructive, this multi-million-copy New York Times bestseller is the definitive manual for anyone interested in gaining, observing, or defending against ultimate control - from the author of *The Laws of Human Nature*. In the book that *People* magazine proclaimed "beguiling" and "fascinating," Robert Greene and Joost Elffers have distilled three thousand years of the history of power into 48 essential laws by drawing from the philosophies of Machiavelli, Sun Tzu, and Carl Von Clausewitz and also from the lives of figures ranging from Henry Kissinger to P.T. Barnum. Some laws teach the need for prudence ("Law 1: Never Outshine the Master"), others teach the value of confidence ("Law 28: Enter Action with Boldness"), and many recommend absolute self-preservation ("Law 15: Crush Your Enemy Totally"). Every law, though, has one thing in common: an interest in total domination. In a bold and arresting two-color package, *The 48 Laws of Power* is ideal whether your aim is conquest, self-defense, or simply to understand the rules

of the game.

### **Why We Never Think Alone** Polity

With a new epilogue about Bill Gates's global agenda and how we can resist the billionaires' war on life Widespread poverty and malnutrition, an alarming refugee crisis, social unrest, and economic polarization have become our lived reality as the top 1% of the world's seven-billion-plus population pushes the planet—and all its people—to the social and ecological brink. In Oneness vs. the 1%, Vandana Shiva takes on the Billionaires Club of Gates, Buffet, and Zuckerberg, as well as other modern empires whose blindness to the rights of people, and to the destructive impact of their construct of linear progress, have wrought havoc across the world. Their single-minded pursuit of profit has undemocratically enforced uniformity and monocultures, division and separation, monopolies and external control—over finance, food, energy, information, healthcare, and even relationships. Basing her analysis on explosive, little-known facts, Shiva exposes the 1%'s model of philanthrocapitalism, which is about deploying unaccountable money to bypass democratic structures, derail diversity, and impose totalitarian ideas based on One Science, One Agriculture, and One History. She calls for the "resurgence of real knowledge, real intelligence, real wealth, real work, real well-being," so that people can reclaim their right to: Live Free. Think Free. Breathe Free. Eat Free.

### *Politics, Economy, and Culture in Late Modernity* Paw Prints

Scholars, politicians, and activists worldwide are finally recognizing the severity of the global environmental crisis, yet serious threats to the environmental movement remain. Anti-environmentalists dismiss the very idea of a "crisis" as a mirage. Much less obvious, however, is the more subtle threat masquerading under the mantle of environmentalism itself. It is this threat that Green Delusions addresses. Writing from the standpoint of a committed environmentalist, Martin W. Lewis contends that many of the most devoted and strident "greens," those who propose a radical environmentalism, unwittingly espouse an ill-conceived doctrine that has devastating implications for the global ecosystem. In this book he distinguishes the main variants of eco-extremism, exposes the fallacies upon which such views ultimately flounder, and demonstrates that the policies advocated by their proponents would, if enacted, result in unequivocal ecological disaster. At once polemic and prescriptive, Green Delusions is an impassioned attempt to defend the environmental movement against extremist ideas that would lead to self-defeating political strategies.

### *Optical Tricks in Art* Anchor

Journalist Walls grew up with parents whose ideals and stubborn nonconformity were their curse and their salvation. Rex and Rose Mary and their four children lived like nomads, moving among Southwest desert towns, camping in the mountains. Rex was a charismatic, brilliant man who, when sober, captured his children's imagination, teaching them how to embrace life fearlessly. Rose Mary painted and wrote and couldn't stand the responsibility of providing for her family. When the money ran out, the Walls retreated to the dismal West Virginia mining town Rex had tried to escape. As the dysfunction escalated, the children had to fend for themselves, supporting one another as

they found the resources and will to leave home. Yet Walls describes her parents with deep affection in this tale of unconditional love in a family that, despite its profound flaws, gave her the fiery determination to carve out a successful life. -- From publisher description.

### *Eternity* MIT Press

Some extraordinary rats come to the aid of a mouse family in this Newbery Medal Award-winning classic by notable children's author Robert C. O'Brien. Mrs. Frisby, a widowed mouse with four small children, is faced with a terrible problem. She must move her family to their summer quarters immediately, or face almost certain death. But her youngest son, Timothy, lies ill with pneumonia and must not be moved. Fortunately, she encounters the rats of NIMH, an extraordinary breed of highly intelligent creatures, who come up with a brilliant solution to her dilemma. And Mrs. Frisby in turn renders them a great service.

### *Raise a Fist, Take a Knee* Harper Collins

One of the most persistent concerns about the future is whether it will be dominated by the predictive algorithms of AI – and, if so, what this will mean for our behaviour, for our institutions and for what it means to be human. AI changes our experience of time and the future and challenges our identities, yet we are blinded by its efficiency and fail to understand how it affects us. At the heart of our trust in AI lies a paradox: we leverage AI to increase our control over the future and uncertainty, while at the same time the performativity of AI, the power it has to make us act in the ways it predicts, reduces our agency over the future. This happens when we forget that that we humans have created the digital technologies to which we attribute agency. These developments also challenge the narrative of progress, which played such a central role in modernity and is based on the hubris of total control. We are now moving into an era where this control is limited as AI monitors our actions, posing the threat of surveillance, but also offering the opportunity to reappropriate control and transform it into care. As we try to adjust to a world in which algorithms, robots and avatars play an ever-increasing role, we need to understand better the limitations of AI and how their predictions affect our agency, while at the same time having the courage to embrace the uncertainty of the future.

### **Epidemic Illusions** Simon and Schuster

From Brian Greene, one of the world's leading physicists and author of the Pulitzer Prize finalist *The Elegant Universe*, comes a grand tour of the universe that makes us look at reality in a completely different way. Space and time form the very fabric of the cosmos. Yet they remain among the most mysterious of concepts. Is space an entity? Why does time have a direction? Could the universe exist without space and time? Can we travel to the past? Greene has set himself a daunting task: to explain non-intuitive, mathematical concepts like String Theory, the Heisenberg Uncertainty Principle, and Inflationary Cosmology with analogies drawn from common experience. From Newton's unchanging realm in which space and time are absolute, to Einstein's fluid conception of spacetime, to quantum mechanics' entangled arena where vastly distant objects can instantaneously coordinate their behavior, Greene takes us all, regardless of our scientific backgrounds, on an irresistible and revelatory journey to the new layers of reality that modern physics has discovered lying just beneath the surface of our everyday world.
