Emergency Lighting: For
Industrial, Commercial
and Residential Premises
concerns itself with the
provision of emergency
lighting to facilitate exit
routes for people in
industrial, commercial,
and residential areas. The
book covers important
topics such as the
objectives of emergency
lighting systems; the
identification of safe
routes under low lighting
in different areas; and
related devices such as
luminaires, emergency

signs, and way-guidance. Also discussed are the applications of emergency lighting; factors to consider in the design of emergency lighting; electrical installations; and testing and servicing. The book has appendices that serve as guides to UK emergency lighting equipment, names to be contacted, and a short guide in case of fire. The text is recommended for building planners, engineers, and architects. The book is also applicable to those who would like to know about emergency lighting but do not have any specialist knowledge on the subject, as the book avoids the use of jargon.
