This historic book may have numerous typos and missing text. Purchasers can usually download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1917 edition. Excerpt: ...by the lack of compression and the lack of power. The remedy is to fit new piston rings. See Service Bulletin No. 4. f. Auxiliary air devices should never be used on the "Caterpillar" Engine. If the carbureter is in correct carbureter adjustment, there is nothing that an auxiliary air device can do to add to the efficiency of the mixture. It is not possible to get an accurate carbureter adjustment with the use of an auxiliary air device. All the air for the mixture must pass through the carbureter to secure perfect vaporization of the fuel. If maximum fuel economy of the engine is not obtained with the carbureter, it may be that the adjustment is unbalanced somewhere. The necessary mechanism in the form of an air valve and spring is incorporated in the carbureter to obtain every adjustment as far as air is concerned. After a while the auxiliary air device will leak air and be a source of constant annoyance, and can be a fertile cause of engine overheating. Carbon 153--The first and most important consideration in keeping an engine free from carbon is the complete combustion of the fuel, as from this source the largest proportion of carbon is deposited. For further detail, see Service Bulletin No. 5 on carbon and carbon troubles. Valves Must Operate Correctly 154--To secure a perfect carbureter adjustment, the valves must seat perfectly and open and close correctly. Before proceeding with the carbureter adjustment it is absolutely necessary to be sure that when the cam is disengaged on each particular valve rod guide, all the slack is taken up on the valve tappet, valve rod and rocker arm, so that the rocker arm has a clearance of one thirtysecond of an inch over the valve stem. This distance must not be varied. 155 Fig. 17 shows...
