The irradiance pattern was measured for the propagation of a collimated beam of light underwater. A neodymium-doubled green laser was transmitted horizontally at a six foot depth in Lake Winnepesaukee, N.H. The irradiance was measured at distances from 0 to 100 feet and for off-axis angles from 0 to 58 degrees. The water had an attenuation length of 4.54 ft/ln and an absorption coefficient of 0.0446 ln/ft. The ratio of attenuation coefficient to absorption coefficient was 4.94. The fractional power contained within a cone of various angles

was computed. At 20 attenuation lengths only 10% of the total power is contained within a cone of 4 degrees whereas at 4 attenuation lengths this same cone contains 50% of the power. (Author).

[This book provides a] review of self-concept measures that can be used with individuals across the life span, from preschool through late adulthood. These measures were selected according to the prevalence of their use in research and practice, their psychometric soundness, the strength of their theoretical base, and their demonstrable utility in a variety of research and practice situations. For each measure there is a

description of the instrument, the target population, the scale structure, administration and scoring procedures, normative data, and related psychometric research, as well as an evaluative summary and source information. Byrne also provides a comprehensive review of the literature related to 7 empirically testable models of self-concept. Finally, the author identifies the most important psychometric issues related to measuring self-concept, describes the limitations associated with the current state of self-concept measurement, and points to promising directions for future research and application.

Though mankind has traded tangible goods for millennia, recent technology has changed the fundamentals of trade, in both legitimate and illegal economies. In the past three decades, the most advanced forms of illicit trade have broken with all historical precedents and, as Dark

Commerce shows, now operate as if on steroids, tied to computers and social media. In this new world of illicit commerce, which benefits states and diverse participants, trade is impersonal and anonymized, and vast profits are made in short periods with limited accountability to sellers, intermediaries, and purchasers. Louise Shelley examines how new technology, communications, and globalization fuel the exponential growth of dangerous forms of illegal trade--the markets for narcotics and child pornography online, the escalation of sex trafficking through web advertisements, and the sale of endangered species for which

revenues total in the hundreds of millions of dollars. The illicit economy exacerbates many of the world's destabilizing phenomena: the perpetuation of conflicts, the proliferation of arms and weapons of mass destruction, and environmental degradation and extinction. Shelley explores illicit trade in tangible goods--drugs, human beings, arms, wildlife and timber, fish, antiquities, and ubiquitous counterfeits--and contrasts this with the damaging trade in cyberspace, where intangible commodities cost consumers and organizations billions as they lose identities, bank accounts, access to computer data, and intellectual property.

Photographer's Guide to the Nikon Coolpix P1000 Rocky Nook, Inc. Safety and Health in Confined Spaces goes beyond all other resources currently available. International in scope, the 15 chapters and 10 appendices cover every facet of this important subject. A significant addition to the literature, this book provides a confined space focus to other health and safety concepts. Confined spaces differ from other workspaces because their boundary surfaces amplify the consequences of hazardous conditions. The relationship between the individual, the boundary surface, and the hazardous condition is the critical factor in the onset,

outcome, and severity of accidents in these workspaces. The author uses information about causative and other factors from analysis of fatal accidents to develop a hazard assessment and hazard management system. He provides a detailed, disciplined protocol, covering 36 hazardous conditions, that addresses all segments of work--the undisturbed space, entry preparation, work activity, and emergency preparedness and response--and illustrates how to use it. Safety and Health in Confined Spaces gives you the tools you need for preventing and responding to accidents.
