Original tales inspired by Native American and Norwegian folklore that highlight the wisdom of the divine natural world • Shares unique stories about Earth Medicine and animal magic, inspired by the author's unusual Native American (Hopi) and Norwegian upbringing • Interwoven with ancient teachings and everyday practical applications of Earth Medicine, such as grounding and dream interpretation • Each tale is beautifully illustrated with the author's original art, which promotes spiritual understanding and the power of the Earth's healing properties • Paper with French flaps  
Drawing on both her Native American (Hopi) heritage and her Norwegian upbringing, renowned mystic and intuitive healer Sonja Grace shares original wisdom tales, received through her heart and soul, to take you on a journey into the magic of Raven and Bear and the healing power of Earth Medicine. Featuring Sonja's distinctive and beautiful artwork, each story is embedded with ancient teachings to inspire you to live closer to the Earth. The fables include powerful examples of animal magic and everyday, practical applications of Earth Medicine, such as simple energy exercises, dream interpretations, Earth Medicine prayers and meditations, and using medicinal plants to manage negative energies. As background to the stories, Sonja reveals parallels between Norse mythology and Native American traditions and explores the symbology of animals and the recurring central theme of the tension between light and darkness. In Norse myth, the great god Odin, for instance, is often accompanied by Ravens. These birds are considered manifestations of the Valkyries, the goddesses who brought brave soldiers to Valhalla, while in Native American traditions, the Raven is viewed as a trickster or messenger, a magical creature with the ability to shapeshift into a human or animal, yet also portrayed as a hero overcoming adversity. The Bear on the other hand can embody the healer who grounds our energy and removes illness or can represent the inner part of us that has faith. In one fable, Sonja brings

Bear to life as a mythical creature singing songs to bring in the light, reflecting the powerful lesson that by using our voice and speaking the truth we can hold darkness at bay. Throughout all of the stories, Raven and Bear teach us to be responsible for our actions and develop spiritual accountability. By sharing these tales of Earth Medicine, Sonja offers not only a path of reconnection with the Earth but also medicine for the soul. She shows how the Earth works in unity within herself and provides a warehouse of knowledge for all who live upon her.

The Living World is often considered a student favorite. George Johnson has written this introductory biology textbook from the ground up to be an engaging and accessible learning tool with an emphasis on "how things work and why things happen the way they do". The Living World focuses on concepts rather than terminology and technical information, and features a straight forward, clear writing style and a wide variety of media assets to enhance the content of the textbook. George believes that 'relevancy is the window' in which students can learn biology. This is shown through every chapter of this 10th edition, which is focused directly on the relevance of its content to today's students. When the discussion of a topic is linked to a student's own experience, it does not seem so unapproachable, and the utility of learning it is far easier to accept.

Science, Engineering & Mathematics  
Many of the classic questions of philosophy have been raised, illuminated, and addressed in celluloid. In this Third Edition of Philosophy through Film, Mary M. Litch teams up with a new co-author, Amy Karofsky, to show readers how to watch films with a sharp eye for their philosophical content. Together, the authors help students become familiar with key topics in all of the major areas in Western philosophy and master the techniques of philosophical argumentation. The perfect size and scope for a first course in philosophy, the book

assumes no prior knowledge of philosophy. It is an excellent teaching resource and learning tool, introducing students to key topics and figures in philosophy through thematic chapters, each of which is linked to one or more "focus films" that illustrate a philosophical problem or topic. Revised and expanded, the Third Edition features: A completely revised chapter on "Relativism," now re-titled "Truth" with coverage of the correspondence theory, the pragmatist theory, and the coherence theory. The addition of four new focus films: Inception, Moon, Gone Baby Gone, God on Trial. Revisions to the General Introduction that include a discussion of critical reasoning. Revisions to the primary readings to better meet the needs of instructors and students, including the addition of three new primary readings: excerpts from Bertrand Russell's *The Problems of Philosophy*, from William James' *Pragmatism: A New Way for Some Old Ways of Thinking*, and from J. *The Biology Laboratory Manual* by Vodopich and Moore was designed for an introductory biology course with a broad survey of basic laboratory techniques. The experiments and procedures are simple, safe, easy to perform, and especially appropriate for large classes. Few experiments require more than one class meeting to complete the procedure. Each exercise includes many photographs, traditional topics, and experiments that help students learn about life. Procedures within each exercise are numerous and discrete so that an exercise can be tailored to the needs of the students, the style of the instructor, and the facilities available.

There is a growing need for appropriate management of aquatic plants in rivers and canals, lakes and reservoirs, and drainage channels and urban waterways. This management must be based on a sound knowledge of the ecology of freshwater plants, their distribution and the different forms of control available including chemical and physical, and biological and biomanipulation. This series of papers from over 20 different countries was generated from the tenth in the highly successful series of European Weed Research Society symposia on aquatic plant management, this being the tenth. It provides a valuable insight into the complexities involved in managing aquatic systems, discusses state-of-the-art control techniques and deals with patterns of regrowth and recovery post-management. Careful consideration is given to the use of chemicals, a practice which has come under scrutiny in recent years.

Underpinning the development of such control techniques is a growing body of knowledge relating to the biology and ecology of water plants. The authorship of the papers represents the collective wisdom of leading scientists and experts from fisheries agencies, river authorities, nature conservation agencies, the agrochemical industry and both governmental and non-governmental organisations.

Instructors consistently ask for a textbook that helps students understand the relationships between the main concepts of biology, so they are not learning facts about biology in isolation. Mader's *Concepts of Biology* was developed to fill this void. Organized around the main themes of biology, *Concepts of Biology* guides students to think conceptually about biology and the world around them. Just as the levels of biological organization flow from one level to the next, themes and topics in *Concepts of Biology* are tied to one another throughout the chapter, and between the chapters and parts. Combined with Dr. Mader's hallmark writing style, exceptional art program, and pedagogical framework, difficult concepts become easier to understand and visualize, allowing students to focus on understanding how the concepts are related.
