Böyle bir kitaba olan ihtiyaç, şu an hiç olmadığı kadar fazladır. Çünkü ne zaman, evrim konusu gündeme gelse, birçok bilim insanı ve eğitimci, hayatın menşei hakkındaki bütün temel tartışmaların uzun zaman önce sona erdiği intibainı vererek, sanki evrim ispatlanmış gibi bir hava estirmektedirler. Hâlbuki 1200'den fazla bilim insanı Darwinizme olan itirazlarını imzaya açılan bir bildiriyle açıklamaktadırlar. "Dissent from Darwin" isimli internet sitesinde bilim insanlarının imzaladığı listedeki "Hayatın karmaşıklığının açıklanması için kullanılan tabii seleksiyon ve tesadüfî mutasyon mekanizmalarının yeterlilikleri konusundaki iddialara şüpheyile yaklaşıyoruz. Darwinin teorisi için delillerin dikkatli bir şekilde incelenmesi desteklenmelidir." ifadeleri, meselenin hiçbir zaman evrimcilerin iddia ettikleri gibi olmadığını göstermektedir."

Written for a general college audience, this book offers an introduction to the principles and significance of Darwinian evolution. It differs from most other textbooks on evolution in three fundamental ways: first, it is intended for students taking evolution early in their studies; second, it examines the intellectual significance of Darwinian evolution; and third, the text departs from the standard treatment of evolution in other textbooks, wherein the arguments are reductionist, molecular, and overwhelmingly genetic in emphasis. Ken Kardong, also author of *Vertebrates; Comparative Anatomy, Function, Evolution*, is known for his accessible writing style. His almost conversational approach to this topic puts the reader at ease while learning evolutionary concepts. The result is an inviting book that will be read.
