In this guide to the Apocalypse, Kephass presents this unorthodox

analysis of his investigations into occultism, UFOlogy, and paranoid awareness that pertains to the 21st century and the impending End of Days. Secrets of the Holy Lance Adventures Unlimited Press  
From the dawn of humanity, the desire to control the thoughts, behaviors, and actions of others has been a pervasive one. From the use of coercive persuasion by ancient Egyptians and the Knights Templar to today's claims of electronic harassment and microwave "bombing," we have always been at the mercy of those who wish to reprogram our thoughts and reshape our beliefs. Mind Wars includes

fascinating stories of: Ancient attempts at mind control using spell casting, potions, and rituals. Cults and the use of mental reprogramming. More modern mind-control techniques, from hypnosis, drugs, and electroshock to radiation and psychic driving. The inside story of the quest for a real Manchurian Candidate—MKUltra and the CIA connection. The brave new world of electronic harassment, "voice to skull" technology, and gang-stalking. The inner frontier of the human mind is the last bastion of privacy. But are we really in control of our own minds? The answer may shock you!

Consciousness is widely perceived as one of the most fundamental, interesting and difficult problems of our time. However, we still know next to nothing about the relationship between consciousness and the brain and we can only speculate about the consciousness of animals and machines. Human and Machine  
Consciousness presents a new foundation for the scientific study of consciousness. It sets out a bold interpretation of consciousness that neutralizes the philosophical problems and explains how we can

make scientific predictions about the consciousness of animals, brain-damaged patients and machines. Gamez interprets the scientific study of consciousness as a search for mathematical theories that map between measurements of consciousness and measurements of the physical world. We can use artificial intelligence to discover these theories and they could make accurate predictions about the consciousness of humans, animals and artificial systems. Human and Machine

Consciousness also provides original insights into unusual conscious experiences, such as hallucinations, religious experiences and out-of-body states, and demonstrates how 'designer' states of consciousness could be created in the future. Gamez explains difficult concepts in a clear way that closely engages with scientific research. His punchy, concise prose is packed with vivid examples, making it suitable for the educated general reader as well as philosophers and scientists. Problems are brought to life in colourful illustrations and a helpful summary is given at the

end of each chapter. The endnotes provide detailed discussions of individual points and full references to the scientific and philosophical literature.

How does your mind work? How does your brain give rise to your mind? These are questions that all of us have wondered about at some point in our lives, if only because everything that we know is experienced in our minds. They are also very hard questions to answer. After all, how can a mind understand itself? How can you understand something as complex as the tool that is being used to understand it? This book provides an introductory and self-contained description of some of the exciting answers to these questions that modern theories of mind and brain have recently proposed. Stephen Grossberg is broadly acknowledged to be the most important pioneer and current

research leader who has, for the past 50 years, modelled how brains give rise to minds, notably how neural circuits in multiple brain regions interact together to generate psychological functions. This research has led to a unified understanding of how, where, and why our brains can consciously see, hear, feel, and know about the world, and effectively plan and act within it. The work embodies revolutionary Principia of Mind that clarify how autonomous adaptive intelligence is achieved. It provides mechanistic explanations of multiple mental disorders, including symptoms of Alzheimer's disease, autism, amnesia, and sleep disorders; biological bases of morality and religion, including why our brains are biased towards the good so that values are not purely relative; perplexing aspects of the human condition, including why many decisions are irrational and self-defeating despite evolution's selection of adaptive behaviors; and solutions to large-scale problems in machine learning, technology, and Artificial Intelligence that provide a blueprint for autonomously intelligent

algorithms and robots. Because brains embody a universal developmental code, unifying insights also emerge about shared laws that are found in all living cellular tissues, from the most primitive to the most advanced, notably how the laws governing networks of interacting cells support developmental and learning processes in all species. The fundamental brain design principles of complementarity, uncertainty, and resonance that Grossberg has discovered also reflect laws of the physical world with which our brains ceaselessly interact, and which enable our brains to incrementally learn to understand those laws, thereby enabling humans to understand the world scientifically. Accessibly written, and lavishly illustrated, Conscious Mind/Resonant Brain is the magnum opus of one of the most influential scientists of the past 50 years, and will appeal to a broad readership across the sciences and humanities.

A revolutionary call to overthrow society's mental controls and expand consciousness for

the greater good of humanity • Explores the tactics used to control consciousness, such as misinformation, debt systems, fear conditioning, and the distraction of entertainment and technology • Reveals the emerging mechanisms for neurogenetic evolution within our brains that will enable us to throw off the shackles of mental control • Explains how to break through the barriers inhibiting conscious evolution and restore our connection with Nature and the Divine Within society there exists a silent war. The battlefield is our everyday lives: our education, our work, our leisure, our emotional and spiritual well-being, and our thinking and perceptions. Our very sense of “reality” is deliberately engineered to work against conscious evolution and preserve social norms. In short, we are all part of a war of consciousness. And the opportunity is at hand for us to win. Assessing the ways modern societies limit consciousness and keep humanity obedient and distracted from their inner lives, Kingsley Dennis presents an eye-opening investigation of the way our minds have

been programmed to preserve incumbent power structures and their rules. He exposes the tactics employed for thousands of years by the elite to control our minds, including misinformation and propaganda, debt systems, consumerism, religious doctrine, scientific authority, economic “uncertainties,” fear of terrorist attacks and armageddon, distraction through entertainment and technology, as well as the false belief that we are separate from Nature and the Divine. Despite these obstacles, humanity is awakening to culture’s imposed limits on perception through an accelerating rise in collective empathy and awareness. Exploring the biology of consciousness, Dennis reveals the emerging mechanisms for neurogenetic evolution within the brains of gifted individuals, psychics, and visionaries and the coming increases in solar and magnetic energies that will activate them within all of us. Explaining how we can free up mental and emotional energy to break through the barriers inhibiting conscious evolution, he shows that by taking back our minds and changing

the way we think, we can restore our connection with Nature and the Divine and lead humanity into a new age of harmony and awareness. [Beyond the Conscious Mind](#) MIT Press

Genetic algorithms are playing an increasingly important role in studies of complex adaptive systems, ranging from adaptive agents in economic theory to the use of machine learning techniques in the design of complex devices such as aircraft turbines and integrated circuits.

Adaptation in Natural and Artificial Systems is the book that initiated this field of study, presenting the theoretical foundations and exploring applications. In its most familiar form, adaptation is a biological process, whereby organisms evolve by rearranging genetic material to survive in environments confronting them. In this now classic work, Holland presents a mathematical model that allows for the nonlinearity of such complex interactions. He demonstrates the model's universality by applying it to economics, physiological psychology, game theory, and artificial intelligence and then outlines the way in which

this approach modifies the traditional views of mathematical genetics. Initially applying his concepts to simply defined artificial systems with limited numbers of parameters, Holland goes on to explore their use in the study of a wide range of complex, naturally occurring processes, concentrating on systems having multiple factors that interact in nonlinear ways. Along the way he accounts for major effects of coadaptation and coevolution: the emergence of building blocks, or schemata, that are recombined and passed on to succeeding generations to provide, innovations and improvements.

Can we trust our senses to tell us the truth?

Challenging leading scientific theories that claim that our senses report back objective reality, cognitive scientist Donald Hoffman argues that while we should take our perceptions seriously, we should not take them literally. From examining why fashion designers create clothes that give the illusion of a more “attractive” body shape to studying how companies use color to elicit specific emotions in consumers, and even dismantling the very notion that spacetime is objective reality, *The Case Against Reality* dares us to question everything we thought we knew about the world we see.

Seller How will Artificial Intelligence affect crime, war, justice, jobs, society and our very sense of being human? The rise of AI has the potential to transform our future more than any other technology—and there’s nobody better qualified or situated to explore that future than Max Tegmark, an MIT professor who’s helped mainstream research on how to keep AI beneficial. How can we grow our prosperity through automation without leaving people lacking income or purpose? What career advice should we give today’s kids? How can we make future AI systems more robust, so that they do what we want without crashing, malfunctioning or getting hacked? Should we fear an arms race in lethal autonomous weapons? Will machines eventually outsmart us at all tasks, replacing humans on the job market and perhaps altogether? Will AI help life flourish like never before or give us more power than we can handle? What sort of future do you want? This book empowers you to join what may be the most important conversation of our time. It doesn’t shy away from the full range of

viewpoints or from the most controversial issues—from superintelligence to meaning, consciousness and the ultimate physical limits on life in the cosmos.
