The IEPE interface, also commercially known as ICP, is a 2-wire protocol, signal and ground. In this protocol a data logger supplies a constant current via the signal line to the vibration sensor and the sensor modulates the voltage according to the measurand, typically between 10 V to 30 V.

The ICP sensor reads the pressure from the engine's high pressure oil system. The Ford Power race, Navistar International and the Caterpillar engine use this type of sensors. The engine ECM uses this information to order the correct signal to the fuel injectors that will measure the delivery of fuel to the engine.
