The Further Adventures of Shadow Divers John Chatterton and Richie Kohler Scuba Diving Hand SignalsPocket Companion for Recreational Scuba Divers - Black & White Edition

Scuba Confidential is a unique book packed full of valuable tips and expert advice, giving you unprecedented access to the secrets of dive professionals and technical divers. With Scuba Confidential, you will learn how to master skills and techniques that will make you a more confident, capable and safe diver. It offers an informed, balanced view on some of scuba diving's most contentious issues like going solo, deep diving and rebreathers and includes a comprehensive analysis of how diving accidents happen and how to make sure you do not become a statistic. Scuba Confidential also gives you valuable insights on a vast range of topics such as what it is like to do a cave diving course, how to make sure you buy the right equipment, what to consider when choosing an instructor, things even the pros get wrong and where to find the best diving in the world. This is candid, no-nonsense practical advice from a professional who has been involved over the last three decades with virtually every aspect of the sport. Have you ever wondered? How to look as comfortable in the water as the professionals do? What it is like to dive inside shipwrecks? Which training courses are most worthwhile? If you would make a good technical diver? If you should be considering a rebreather? How you can improve your diving skills? How you can reduce your air consumption? Why diving accidents happen and how to prevent them? Whether you might sometimes actually be safer solo diving? How to dive deep safely? Or How muck diving can possibly be any fun? Scuba Confidential has the answers to these questions and many more.

Building on his first book, "SCUBA: A Practical Guide for the New Diver", James Lapenta addresses what is most often the next step in diver training. Advanced Level or Advanced Open Water training is often taken by divers to gain additional skills and knowledge. It is also taken to allow them to gain access to more challenging dives and dive sites. These also pose a greater degree of risk to the individual. Unfortunately some advanced classes are no more than a "taste" or "tour" of advanced level dives. The divers do not get the new knowledge and skills required to safely embark on these dives. In order to safely pursue these dives James has outlined the steps to take to reduce the risk of injury and worse. From describing the dives to offering advice on the content one should expect, as well as selecting an instructor, he offers new and not so new divers guidance. Additional sections on equipment options, air supply management, dive planning, and dive selection for maximum learning potential are looked at. Also included is a section on a subject often overlooked in recreational SCUBA diving - the after-effects of a diving accident and rescue/recovery on the rescuer and witnesses to the event. Post Traumatic Stress in Recreational Dive Rescues is a real possibility and one that must be looked at when executing dives with greater risk. Safety in training and after training is the heart of this work and the driving force behind its publication. James has experienced the best in training and that which left something to be desired. He gives examples of both throughout the work. If you do not have his first book, it is highly recommended that you also acquire it as a companion to this one. While they do contain some sections of the same information, there are sections in the first book that are not included in this that are highly beneficial.

A collection of thrilling diving stories There's everything from classic tales of wreck discoveries to encounters with beautiful and bizarre creatures beneath the waves. There are stories of death and disaster as well as bravery and triumph. Each tale has been chosen to stoke the fire of divers everywhere and some are illustrated with colour photographs. Take the plunge and read about the diver who discovered how to put sharks in a trance and the marine biologist who lost a limb trying to proving that sharks were safe to swim with. There's the tale behind the Red Sea's most famous wreck, as well the Titanic's sister ship that keeps claiming divers' lives. Read about the politician attacked by a turtle, the saltwater crocodile that lost a sub-aqua scuffle and the eel feeding frenzy that almost claimed a life. The exciting and the extreme rub shoulders with more poetic pieces about the people and places that make up the folklore of this fascinating sport, and some are even brought to life by the author's photography. This global tour takes you everywhere: from Indonesia to the Caribbean and from the chill waters of Northern Europe to the reefs of the Pacific. Stories of technical pioneers are accompanied by quirky tales of adventure beneath the waves. Every ocean of the world is explored making this essential reading - or a wonderful gift - for divers everywhere.

After rewriting history with their discovery of a Nazi U-boat off the coast of New Jersey, legendary divers John Chatterton and Richie Kohler decided to investigate the great enduring mystery of history's most notorious shipwreck: Why did Titanic sink as quickly as it did? To answer the question, Chatterton and Kohler assemble a team of experts to explore Titanic, study its engineering, and dive to the wreck of its sister ship, Britannic, where Titanic's last secrets may be revealed. Titanic's Last Secrets is a rollercoaster ride through the shipbuilding history, the transatlantic luxury liner business, and shipwreck forensics. Chatterton and Kohler weave their way through a labyrinth of clues to discover that Titanic was not the strong, heroic ship the world thought she was and that the men who built her covered up her flaws when disaster struck. If Titanic had remained afloat for just two hours longer than she did, more than two thousand people would have lived instead of died, and the myth of the great ship would be one of rescue instead of tragedy. Titanic's Last Secrets is the never-before-told story of the Ship of Dreams, a contemporary adventure that solves a historical mystery.

SCUBA is a fun, relaxing, educational, interesting, and -- if approached properly -- safe activity, it is nonetheless a sport that has risks. SCUBA diving is in fact an extreme sport that can injure or even kill very quickly, and in some very nasty ways. What we are doing is entering an alien environment that is normally hostile to human life. We cannot breathe in water without some kind of mechanical assistance. These are facts and the details should be covered in every Open Water (OW) class. All too often in today's society, however, people do not want to take the time to properly prepare and get the education to safely take on new tasks. Some agencies appear to have responded to this by developing training programs that turn out high numbers of certified divers in shorter time frames, necessitating the reduction of time spent on what I consider to be some necessary basic skills. While this has resulted in great numbers of new divers entering the water, it has not resulted in many of those divers staying in the water. New divers are often given just enough training to enable them to dive in the most benign conditions under close supervision. Even then, there are still those who find out their initial training was just not adequate. It is at this point that they either make the decision to get more training or they leave the sport. The latter happens all too often. The former, when it does happen, does not always occur for the right reasons. Students should return to training to expand their diving and learn new skills; they should not have to return for new training just to be able to enjoy the sport safely. To require students to come back for basic information is something I find very troubling, and in some cases, has actually cost divers their lives. A lack of rescue instruction has resulted in a number of diver deaths when buddies did not know how to drop weights, support a diver at the surface, or even stay in contact with their buddy. This is another area frequently talked about, but all too often not actually put into practice. The concept of always diving with a buddy and just what that means in the "real world" is often given too little attention. Unfortunately, it is impossible to foresee every conceivable situation that can arise, but there are many basic issues that can be covered. The following chapters will hopefully address much of what is being overlooked or delayed in many programs as they exist today. It is my hope that this information also finds its way into the hands of those who have not yet begun the training process. I have included a chapter on how to select an instructor based on the quality of instruction and the content of the course. In some cases, these classes may cost more than the less comprehensive courses also available, but usually they do not. In fact, when you consider the additional skills and education gained from a more comprehensive course, you will find that you have received much more value for each dollar spent. In addition, you gain priceless benefits in the form of greater confidence, enjoyment, skills, and -- most importantly -- safety. Enjoy and dive safe

The wonderful world below the surface of the ocean is alive with exotic creatures and plant life. It is colorful, funny, awe-inspiring and beautiful. Just observing some of the every-day behaviors of fish, octopus, sharks, or rays can be a treat. Scuba diving has been a passion for the author ever since her father told her about his dive trips. It opened an exciting underwater world for her and if you have ever considered scuba diving, getting certified is fun and challenging. You can explore and have adventures in the seas and travel the world too.

For Captain Leonardo Fusco the discovery of the sea started at the age of nine. Years later while snorkeling off the coast of Palinuro, he discovered a branch of Corallium Rubrum (red coral) that for centuries has been widely traded and highly valued in the jewelry industry. As a result of this discovery, he started to search for coral and soon he became the first corallaro. The intention of the author in writing this book is to make the nations of the world aware of this sad reality and to promote a universal consensus for the protection of Red and Pink Coral (Corallium Rubrum) and for making trade of all coral illegal.A portion of the proceeds from this book will go to www.Reef.org

"Lobster is served three ways in this fascinating book: by fisherman, scientist and the crustaceans themselves. . . . Corson, who worked aboard commercial lobster boats for two years, weaves together these three worlds. The human worlds are surely interesting; but they can't top the lobster life on the ocean floor." — Washington Post In this intimate portrait of an island lobstering community and an eccentric band of renegade biologists, journalist Trevor Corson escorts the reader onto the slippery decks of fishing boats, through danger-filled scuba dives, and deep into the churning currents of the Gulf of Maine to learn about the secret undersea lives of lobsters. This P.S. edition features an extra 16 pages of insights into the book, including author interviews, recommended reading, and more.
