"One afternoon in 1994, I had an idea." So begins Stuart David's magical, evocative memoir about the indie pop band Belle and Sebastian.

Determined to make his living writing stories and songs, Stuart had spent several years scraping by on the dole in his small, industrial home town.

Then he had the fateful idea to learn bass guitar, and to head for Glasgow in search of like-minded artists. Within one extraordinary year he had helped create one of the most influential, beloved bands of all time. Set against the vivid background of early nineties Glasgow, In the All-Night Café describes Stuart's fortuitous meeting with the group's cofounder Stuart Murdoch in a course for unemployed musicians. It tells of their adventures in two early incarnations of Belle and Sebastian and culminates in the recording of their celebrated debut album, Tigermilk. This portrait of the group and its origins will resonate with anyone who has put together--or thought of putting together--a band. It is a story of a group of friends who wanted to create a different kind of music, and how--against all expectations--they succeeded. Written with wit, affection and a novelist's observant eye, In the All-Night Café brings to life the early days of this most enigmatic and intriguing of bands. Stuart David is a Scottish musician, songwriter and novelist. After cofounding Belle and Sebastian, he went on to front Looper. He is the author of the novels Nalda Said, The Peacock Manifesto, and A Peacock's Tale.

This book traces the development of popular cinema from its inception to the present day to understand why humankind has expanded its viewing of popular movies over the last century. Drawing from his extensive work as a psychologist studying artistic canons, James E. Cutting presents hundreds of films across a wide range of genres and eras, considers the structure of frame content, shots, scenes, and larger narrational elements defined by color, brightness, motion, clutter, and range of other variables. He examines the effects of camera lenses, image layout, transitions, and historical functions to classify different kinds of shots. He explains the arcs of scenes, the larger structure of sequences, and the scene- and sequence-like units that have become increasingly prevalent in recent years. The book then breaks movies into larger, roughly half-hour parts and espouses the psychological evidence behind each device's intended effect, ultimately exploring the rhythms of whole movies, the flow of physical changes, and the cinematic polyrhythms that have come to match aspects those in the human body. Along the way, the book considers cultural and technological evolutions that have contributed to shifts in viewers' engagement by sustaining attention, promoting understanding of the narrative, heightening emotional commitment, and fostering felt presence in the story. Movies on Our Minds asks critical questions about how our emotional processes and the way our experiences of movies have changed over the course of cinematic history, for a cutting-edge look at what makes popular movies enjoyable.

Natural and man-made disasters--earthquakes, floods, volcanic eruptions, industrial crises, and many others--have claimed more than 3 million lives during the past 20 years, adversely affected the lives of at least 800 million people, and caused more than 50 billion dollars in property damages. A major disaster occurs almost daily in some part of the world. Increasing population densities in flood plains, along vulnerable coastal areas, and near dangerous faults in the earth's crust, as well as the rapid industrialization of developing economies are factors likely to make the threat posed by natural disasters much bigger in the future. Illustrated with examples from recent research in the field, this book summarizes the most pertinent and useful information about the public health impact of natural and man-made disasters. It is divided into four sections dealing with general concerns, geophysical events, weather-related problems, and human-generated disasters. The author starts with a comprehensive discussion of the concepts and role of surveillance and epidemiology, highlighting general environmental health concerns, such as sanitation, water, shelter, and sewage. The other chapters, based on a variety of experiences and literature drawn from both developing and industrialized countries, cover discrete types of natural and technological hazards, addressing their history, origin, nature, observation, and control. Throughout the book the focus is on the level of epidemiologic knowledge on each aspect of natural and man-made disasters. Exposure-, disease-, and health-event surveillance are stressed because of the importance of objective data to disaster epidemiology. In addition, Noji pays particular attention to prevention and control measures, and provides practical recommendations in areas in which the public health practitioner needs more useful information. He advocates stronger epidemiologic awareness as the basis for better understanding and control of disasters. A comprehensive theoretical and practical treatment of the subject, The Public Health Consequences of Disasters is an invaluable tool for epidemiologists, disaster relief specialists, and physicians who treat disaster victims.

The car industry is considered one of the most archetypal global industries. Nevertheless, it looks more like a world of regions rather than a fully

integrated global one. Does regionalism prevail over or complement globalization? Moreover, is there still room for unilateral (go-it-alone) strategies?

This volume addresses these questions from the perspective of the car industry, the most important industrial 'carrier' of these developments. Cars, Carriers of Regionalism? provides an integral account of the geo-economic and geo-political dilemmas and opportunities faced by the car industry in developed as well as developing countries at the start of the 21st century. All major regional integration initiatives are covered and their feasibility is assessed, including go-it-alone efforts. This volume - written by leading scholars who have participated to the GERPISA international network's four-year research programme Globalization or Regionalisation for the Auto Industry? - is intended for both academics and practitioners/managers.

More on the relationship between brain disease and creativity Neurological Disorders in Famous Artists - Part 2' presents more writers, philosophers, musicians, painters and film directors who developed some form of neurological dysfunction and whose style and output changed following a stroke or other cerebral disorder. Mozart, Baudelaire, de Kooning, Proust, F sсли, Heine, Fellini, Visconti and others are all striking examples of how extraordinary creativity can be challenged and modified or destroyed and restored, all within the drama of a disease. When brain disease challenges the capabilities of artists, the changes that subsequently occur in their work provide a unique opportunity to explore the mysteries of creativity. This may also lead to a better understanding on how certain artists developed, particularly when the course of a disease corresponds with what is generally recognized as a new chapter in their work. This book offers a fascinating read for neurologists, psychiatrists, general physicians and anybody interested in art, literature, music and film.

""Portuguese Ulyssism' (Gilberto Freyre's concept referring to Luís Vaz de Camões's epic and the Portuguese maritime voyage in the Renaissance) is an axial cultural construct, which this work partially absorbs but also departs from, to assert mutating literary experiences referring to the Camonean version of the myth in the epic Os Lusíadas/The Lusiads. Vaz de Camões's epic describes Vasco da Gama's voyage to India and his encounters with numerous obstacles and hardships in the New World, thus relocating Homer's The Illiad and The Odyssey, and, in particular, Virgil's The Aeneid. In it, the myth of Ulysses combines with the subject of Portuguese colonial dispersal throughout the world in the Renaissance to form the focus of Camões's epic, whose characters are split into two archetypes: Ulysses - nationals with diasporic identities - and the Old Man of Restelo, who represents the arguments of the settled identities of the nation against the ambitions of a Portuguese global diaspora. This research revisits the Camonean dialogue with Homer and Virgil in the context of the Portuguese colonial dispersal in the Renaissance to suggest a postcolonial Ulysses in the Lusophone world"--
