*Gage is a full-length novel and part of The Barringer Brothers series but can be read as a standalone. After nearly losing his friend in a logging accident, Gage Barringer is convinced now more than ever that he needs to find a different job. But his side business of breaking colts at the small Montana ranch he inherited from his grandfather doesn't earn him enough money. He has his mind set on running The Raven's Nest, a popular bar and restaurant near his ranch. The original owner has died and Gage is waiting for it to be put up for sale. But there is a five-foot-four, brown eyed, obstacle in his way, an

obstacle with lips made for sin and a voice made for breaking hearts. And Summer Donovan is one road block Gage Barringer won't be able to find a way around. Contains mature content. Intended for readers 18+ Other books in the series: Rain Shadow Books 1-5 Cash Seth Jericho GageBarringer Brothers #1
The threat of terrorism has become an ever present preoccupation, necessitating the constant review and updating of defensive strategies to counter it from national governments and policymakers. This book presents selected articles based on some of the lectures delivered at the

NATO Centre of Excellence - Defence against Terrorism (COE - DAT) Advanced Training Course (ATC) Future Trends and New Approaches in Defeating the Terrorism Threat, held in Algiers, Algeria, in October 2011. Subjects covered by these articles include an overview of terrorism; respecting human rights in the countering of terrorism; suicide terrorism; terrorism involving weapons of mass destruction; bioterrorism; terrorism, media and public information; strategic communications in the defence against terrorism; the challenges posed by non-state armed groups; and sources of instability. This collection of articles will be of interest to all those

involved in countering the threat of terrorism worldwide. *Gage Gallaudet University Press*

 The next wave of science writing is here. Editor Max Brockman has talent-spotted 19 young scientists, working on leading-edge research across a wide range of fields. Nearly half of them are women, and all of them are great communicators: their passion and excitement makes this collection a wonderfully invigorating read. We hear from an astrobiologist at the Jet Propulsion Laboratory in Pasadena about the possibilities for life

elsewhere in the solar system (and the universe); from the director of Yale's Comparative Cognition Laboratory about why we keep making the same mistakes; from a Cambridge lab about DNA synthesis; from the Tanzanian savannah about what lies behind attractiveness; we hear about how to breed plants to withstand disease, about ways to extract significance from the Internet's enormous datasets, about oceanography, neuroscience, microbiology, and evolutionary psychology.
