Based upon a survey of five faith-based volunteer groups, Promising Practices offers valuable insights and fresh perspectives into the ways women’s participation in religious civic organizations may work as a gateway toward participatory democracy. By approaching women’s faith-based volunteering as a social practice, the book engages with three of the most important dimensions of civil society: gender, religion, and democracy. Cavaliere teases out the complexity of interactions among these three dimensions of civic life through stories of individual women who volunteer for three different religious organizations. The volume examines how faith-based volunteering is experienced by women in contemporary Japan and how it becomes a site of empowering and disempowering practices through which women balance the benefits and the costs of personal shifts, socio-economic changes and democratic transformation.

Throughout history, people have constructed simple timber lattice shelters such as the tepee or yurt, covered with animal skins, leaves, grasses and woven fabrics. Over the last fifty years, more sophisticated ‘webs of wood’ have emerged, with timber gridshells in particular becoming a structurally expressive form of architecture. Recent developments in digital design, 3-D modelling software, timber fabrication technologies as well as trends towards low-carbon construction have further reinforced architects’ interest in the use of lightweight timber grids and lattice structures. This timely book charts the origin and evolution of the timber gridshell and its relation to timber lattice architecture. Drawing on a range of international case studies, the authors trace the effect advances in technology have had on design and construction in this field, providing a clear understanding of the structure, morphology, design process, and construction technology, and examining both the application and constraints of timber gridshells in architectural design. Timber Gridshells is a highly illustrated, up-to-date resource which provides detailed answers and inspires new ideas. As such, it is essential reading for students of architecture as well as professional architects.

So you want to create animation! Where do you start? With an idea. This creative, exercise-packed guide contains examples and idea-generating activities. What tools do you need? Your computer, simple software programs, and your imagination. This book will tell you how to utilize these tools. Must you spend your life savings on your set-up? No. The author's charts and project timelines will guide you and make the overwhelming simple, and keep your shopping lists manageable. With Animation in the Home Digital Studio, amateurs and animation students alike can learn how to create a variety of computer animations: from puppet to clay to pixilated, drawn and cartoon. This book contains a CD-ROM loaded with animation clips and exercises. The book's 8-page color insert illustrates stills from the work of independent animators around the world. The book's guide to resources contains a comprehensive list of contests, shows, societies, organizations, e-zines, and more. Steven Subotnick takes a personal approach to animation. His book is for artists, amateurs, professionals, students, and anyone who wants to use animation as a means of expression. It explains how to create a variety of animations: from puppet to cutout, and from drawn to object animation. Subotnick covers the use of popular software products, including Macromedia Flash, Adobe Photoshop®, Adobe Premiere®, Digidesign ProTools Free, and others.
