Abnormal Child and Adolescent Psychology

Macmillan Higher Education
How reliable is our intuition? How much should we depend on gut-level instinct rather than rational analysis when we play the stock market, choose a mate, hire an employee, or assess our own abilities? In this engaging and accessible book, David G. Myers shows us that while intuition can provide us with useful—and often amazing—insights, it can also dangerously mislead us. Drawing on recent psychological research, Myers discusses the powers and perils of intuition when:

- judges and jurors determine who is telling the truth;
- mental health workers predict whether someone is at risk for suicide or crime;
- coaches, players, and fans decide who has the hot hand or the hot bat;
- personnel directors hire new employees;
- psychics claim to be clairvoyant or to have premonitions;
- and much more.

Introduction to Psychology

Hasanraza Ansari
This book is designed to help students organize their thinking about psychology at a conceptual level. The focus on behaviour and empiricism has produced a text that is better organized, has fewer chapters, and is somewhat shorter than many of the leading books. The beginning of each section includes learning objectives; throughout the body of each section are key terms in bold followed by their definitions in italics; key takeaways, and exercises and critical thinking activities end each section.

Handbook of the Psychology of Aging Worth Publishers

This book presents an update on social psychology as a disciplinary space and research field. First, it discusses the irruption of research methods from other cultural niches in the instituted academic area. Then, the second and third chapters discuss the role of Critical Psychology for community emancipation in hybrid settings and the development of Vygotsky's theory in Latin America. The fourth and fifth chapters offer some questions on contemporary legal and political culture. The sixth and seventh chapters ask how to reconceptualise the studies on Social Imaginary and childhood. The eighth and ninth chapters present topics as performativity, cybernetic, subjectivities, and technology networks in health-related social support. In the last chapter, the author asks: are networks a cause of the human condition or a result of it? Is virtuality a condition and, at the same time, a result of the human? What could offer a psychoanalytic ethnographic approach to recover the concept of being human as the experience of intimate bonding as part of a social network?
