 In complex analysis, the theory of functions of several complex variables is the branch of mathematics dealing with complex-valued functions in the space C^n of n -tuples of complex numbers. (,, ...,)As in complex analysis of functions of one variable, which is the case $n = 1$, the functions studied are holomorphic or complex analytic so that, locally, they are power series in the variables z_i . The complex numbers are the field \mathbb{C} of numbers of the form $x+iy$, where x and y are real numbers and i is the imaginary unit equal to the square root of -1 , $\sqrt{-1}$.
