This Handbook outlines the current state of research in social studies education – a complex, dynamic, challenging field with competing perspectives about appropriate goals, and on-going conflict over the content of the curriculum. Equally important, it encourages new research in order to advance the field and foster civic competence; long maintained by advocates for the social studies as a fundamental goal. In considering how to organize the Handbook, the editors searched out definitions of social studies, statements of purpose, and themes that linked (or divided) theory, research, and practices and established criteria for topics to include. Each chapter meets one or more of these criteria: research activity since the last Handbook that warrants a new analysis, topics representing a major emphasis in the NCSS standards, and topics reflecting an emerging or reemerging field within the social studies. The volume is organized around seven themes: Change and Continuity in Social Studies Civic Competence in Pluralist Democracies Social Justice and the Social Studies Assessment and Accountability Teaching and Learning in the Disciplines Information Ecologies: Technology in the Social Studies Teacher Preparation and Development The Handbook of Research in Social Studies is a must-have resource for all beginning and experienced researchers in the field.

This book presents a comprehensive evaluation study of elementary education in Israel conducted over several years and completed in 1977. The study concentrates on Jewish schools, but some data are presented from parallel studies in the Arab Schools. A notable feature of the study is its unusually large scope both in size and content. It sampled nearly ten percent of Jewish schools and fifteen percent of Arab schools. The content includes a great variety of areas: cultural origins, home conditions and socialization patterns of pupils, conditions and practices in schools, teachers' and principals' backgrounds and their attitudes toward central issues in education, pupils' personality characteristics and motivations related to school experience, their learning abilities and achievements in five major school subjects. Special emphasis is given to the disadvantaged pupils, and an examination of the problem of equality of educational opportunity. This study's uniqueness lies in a novel approach in the measurement and analysis of scholastic achievements. Like all studies in the "psychometric" tradition, it places pupils in a position related to an advantaged pupil group. But test construction and most data analyses were carried out by the criterion-reference approach combined with a notion of "master learning." This enabled presentation of the absolute achievement level of a pupil or a pupil group vis-a-vis the optimal and minimal requirements of the curriculum and each school subject, as well as for its various content area. This approach permits much more than the traditional methods, utilization of results for deliberation and revision in educational policies. This applies particularly to curriculum construction and methods of instruction. It may also lead to a more appropriate definition of the disadvantaged pupil. Five chapters of the study present a historical review and sociological analysis of the problems of Israeli education and deal with specific methodological considerations. The twelve following chapters present detailed results and analysis for each topic of investigation.
