The authors  
have updated  
each of the  
books eight  
units to reflect  
the progress  
in our  
understanding  
of life at many  
levels, from  
molecules to

ecosystems.  
The sixth  
edition has a  
new chapter  
that  
introduces  
students to  
science as a  
way of  
knowing  
nature. A new

feature highlights examples of the process of science throughout the book, and each chapter contains a process of science question that encourages students to experience science. Media activities allow additional practice with experimentation and analysis of data, and interviews with various researchers humanize science as a social activity. Exploring Life Ingram Now in its

twelfth edition, Lewin's GENES continues to lead with new information and cutting-edge developments, covering gene structure, sequencing, organization, and expression. Leading scientists provide revisions and updates in their individual field of study offering readers current data and information on the rapidly changing subjects in molecular

biology. *Campbell Biology* Cengage Learning "This book, now in the tenth edition, to prepare future and even current professionals to better intervene and treat the children and families at risk. This book draws on my years of practice to present an all-encompassing view of maltreatment, in its various guises, from symptoms of abuse and neglect to motivations of those who

abuse and neglect children, as well as how the social services system intervenes. The questions asked of me by students, social service workers, and trainees have helped to shape the direction of the book. The responses from faculty reviewers who teach courses in child welfare have further fine-tuned what is presented here. My experiences not only as a protective social worker

but also as a therapist treating victims, families, and perpetrators and now as a clergywoman have helped to provide ideas for the illustrations and examples"--
