*Neuroradiology Imaging Case Review E-Book* Elsevier Health Sciences

Few graduating residents are ready for the demands of subspecialty neuroradiology. This is in part because there remain gaps in the educational literature prior to fellowship. Subspecialty practice requires familiarity with exams and procedures that residents rarely encounter. Neuroimaging is frequently both high complexity and high acuity. The beginning of fellowship can therefore present the steepest and highest stakes learning curve encountered during the whole of radiology training. The goal of this text is to provide a primer for this challenging year. Search patterns, procedure checklists, recommended resources, and tips for efficiency are presented in as accessible a manner as possible. This book is everything I wish I had known and everything I would pass on to each new trainee. I'm sure it'll be a useful tool on your path to becoming an excellent neuroradiologist and physician.

*Ultrasound: The Requisites* Elsevier Health Sciences

Neurology is primarily characterized by a variety of diseases which seem very similar and are therefore difficult to distinguish between. Skill at differential diagnosis is therefore absolutely paramount. Neurological Differential Diagnosis is a streamlined handbook of prioritized differential diagnosis, to be used both in clinical practice and for exam review. By presenting differential diagnosis in order of frequency and importance, this book provides a practical handbook for clinicians in training, as well as a potential resource for quick board review. Whilst the book covers the most important syndromes and disease entities, readers are referred to other texts for more exhaustive differentials. By limiting differentials in this way - to the most likely and most serious diagnoses - the reader can more easily recall relevant disease processes when faced with a particular clinical situation, whether it be a patient in the emergency room or a difficult question on the board examination. The book specifically targets neurology residents and fellows, with overlap to neurosurgery and psychiatry. Internal medicine physicians with an interest in neurological problems and medical students looking for an edge in clinical neuroscience would also benefit from this text. The content is primarily mid-level material, in a pedagogic format. In order to organize the students' thought processes concise tables and line drawing templates are included. The book is organized into broad chapters by type of disorder and some overlap occurs between particular chapters.
