We realized that in ten years what matters will be how students approach a problem using the tools they carry with them—common sense and common knowledge—not the particular mathematics we chose for the curriculum. Using our text, students work regularly with real data in moderately complex everyday contexts, using mathematics as a tool and common sense as a guide. The focus is on problems suggested by the news of the day and topics that matter to students, like inflation, credit card debt, and loans. We use search engines, calculators, and spreadsheet programs as tools to reduce drudgery, explore patterns, and get information. Technology is an integral part of today's world—this text helps students use it thoughtfully and wisely. This second edition contains revised chapters and additional sections, updated examples and exercises, and complete rewrites of critical material based on feedback from students and teachers who have used this text. Our focus remains the same: to help students to think carefully—and critically—about numerical information in everyday contexts.

Highways & Road Construction Tata McGraw-Hill Education

Be vigilant when driving through Africa: camels are careless when crossing the road, and women carrying waterpots are little more watchful. So warn the authors of this fifth edition of Africa Overland. They also give updated information on each country's political and security situation (Angola, Sierra Leone and Liberia are on the up; since this guide's last edition, security in Western Sudan and Eastern Chad has turned sour); provide an expanded Route Outlines section including

information on border crossings; and offer revised recommendations on vehicles including practical coverage on buying a vehicle, maintenance and driving. ?This is the ultimate roadies' guide to traversing the wilderness of Africa. An indispensable guide to negotiating the uncharted perils of Africa's vast plains.' Daily Express (UK)

Freight Management International

This book is for the course on Machine Drawing studied by the undergraduate mechanical engineering students in their 3rd semester. Unique to this is the coverage of CAD alongside the conventional discussions on each topic. The important topics pertaining to engineering drawing are covered before discussing the machine drawing concepts thus making this a complete offering on the subject.
