Prescriptive Method for Residential Cold-formed Steel Framed [i.e. Framing] Cambridge University Press

For centuries homebuilders have made wood their material of choice because of its satisfactory performance, abundant supply, and relatively low cost. In recent years, however, lumber prices have experienced a marked upward trend. Unpredictable fluctuations in lumber prices and concerns about lumber quality have caused homebuilders and other providers of affordable housing to seek alternative building materials and methods. The use of cold-formed steel (CFS) framing in housing

has increased over the past few years, but remains limited because steel has not been integrated into conventional home framing systems. Residential floor construction represents an opportunity to improve resource utilization by integrating steel framing into otherwise conventional wood-frame houses. Builders' Guide to Residential Steel Floors, provides builders, code officials, homeowners, and design professionals with the necessary information required to use steel floor joists in typical residential construction.

Bloody Woman is bloody good writing. It moves between academic, journalistic and personal essay. I love that Lana moves back and forward across these genres: weaving, weaving - spinning the web, weaving the sparkling threads under our hands, back and forward across a number of spaces, pulling and holding the tensions, holding up the baskets of knowledge. Tusiata Avia This wayfinding set of essays, by acclaimed writer and critic Lana Lopesi, explores the overlap of being a woman and Sāmoan. Writing on ancestral ideas of womanhood appears alongside contemporary reflections on women's experiences and the Pacific. These essays lead into the messy and the sticky, the whispered conversations and the unspoken. As Lopesi writes, 'Bloody Woman has been scary to write... In putting words to my years of thinking, following the blood and revealing the evidence board in my mind, I am breaking a silence to try to understand something. It feels terrifying, but right.' These acts of self-revelation ultimately seek to open up new spaces, to acknowledge the narratives not yet written, and the voices to come.

This highly illustrated reference work covers the three principal types of surface technologies that best protect engineering devices and products: diffusion technologies, deposition technologies, and other less commonly acknowledged surface engineering (SE) techniques. Various applications are noted throughout the text and additionally whole chapters are devoted to specific SE applications across the automotive, gas turbine engine (GTE), metal machining, and biomedical implant sectors. Along with the benefits of SE, this volume also critically examines SE's limitations. Materials degradation pathways - those which can and those which cannot be mitigated by SE - are rigorously explained. Written from a scientific, materials engineering perspective, this concise text is supported by high-quality images and photo-micrographs which show how surfaces can be engineered to overcome the limits of conventionally produced materials, even in complex or hostile operating environments. This book is a useful resource for undergraduate and postgraduate students as well as professional engineers.

Residential and Low-rise Steel Framing

Over the last 30 years, hydrographical marine surveys in the English Channel helped uncover the potential wreck sites of German submarines, or U-boats, sunk during the conflicts of World War I and World War II. Through a series of systemic dives, nautical archaeologist and historian Innes McCartney surveyed and recorded these wrecks, discovering that the distribution and number of wrecks conflicted with the published histories of U-boat losses. Of all the U-boat war losses in the Channel, McCartney found that some 41% were heretofore unaccounted for in the historical literature of World War I and World War II. This book reconciles these inaccuracies with the archaeological record by presenting case studies of a number of dives conducted in the English Channel. Using empirical evidence, this book investigates possible reasons historical inconsistencies persist and what Allied operational and intelligence-based processes caused them to occur in the first place. This book will be of interest to scholars and researchers in the fields of nautical archaeology and naval history, as well as wreck explorers.

This report assesses the levels and effects of exposure to ionizing radiation. Scientific findings underpin radiation risk evaluation and international protection standards. This report comprises a report with two underpinning scientific annexes. The first annex recapitulates and clarifies the philosophy of science as well as the scientific knowledge for attributing observed health effects in individuals and populations to radiation exposure, and distinguishes between that and inferring risk to individuals and populations from an exposure. The second annex reviews the latest thinking and approaches to quantifying the uncertainties in assessments of risk from radiation exposure, and illustrates these approaches with application to examples that are highly pertinent to radiation protection.

There Is Confusion

Use of cold formed steel framing in the residential market has increased over the past years. Its price stability, consistent quality, similarity to conventional framing, successes in the commercial market, & resistance to fire, rot, & termites have attracted the attention of many builders. However, lack of prescriptive construction requirements has prevented this alternative material from gaining wider acceptance among home builders & code officials. This handbook provides background,

engineering assumptions & methods, & detailed calculations for this method. Illustrated.
