The practicing accountant should have a thorough knowledge of the processes within an accounting system. Otherwise, it would not be possible to create a system of controls, write procedures, understand where errors are originating, or develop new systems. The Accounting Information Systems book provides the deep background needed to gain proficiency in this area. In addition, there is significant treatment of the many controls integrated into accounting systems. Finally, the book describes the key events in the process of developing and installing a new system. In short, this book is the essential source for the accountant who wants to understand the core functions of an accounting information system.

McGraw-Hill Europe
Accounting Information Systems, 3e provides thorough and up-to-date coverage of accounting information systems and related technologies. It features an early presentation of transaction cycles plus a special emphasis on ethics, fraud, and the modern manufacturing environment. The number-one Enterprise Resource Planning system, SAP, has been integrated into this new edition. Featuring screen shots of the SAP Web site in the text and a password that links students to a specially created SAP Web site, Hall is the only text on the market to give students hands-on exposure to ERP. Also new to this edition are chapters on such cutting-edge topics as the Resources, Events, and Agents (REA)

approach, Enterprise Resource Planning (ERP) systems, and Electronic Commerce systems. Hall assumes that the student is familiar with fundamental accounting principles and basic computer concepts and terminology and has been exposed to computer programming. Hall's focus is on the needs and responsibilities of accountants as end users of systems, systems designers, and auditors.

"The public often imagines accountants holding calculators and briefcases, basing their opinions on those they hold of jobs like bookkeepers and IRS auditors. In reality, accounting is at the center of every business. Accounting professionals use critical thinking to make decisions like how to report, record, or categorize accounting

activities. As technology continues influencing the ways companies operate, accounting professionals are becoming more strategic in their focus - moving away from "crunching numbers" and following checklists and towards becoming valuable advisors to help businesses meet their strategic objectives. In order to provide strategic value, accounting professionals make decisions by using economic and business information. In this chapter, you will learn about where this information comes from and why information systems are an integral part of operations including: How an information system supports business operations; How management uses information; What the relationship is between data analytics and accounting;

How accounting information systems have evolved"--

The revolutionary effects of using accounting information systems by displacing manual information systems in the private and public sectors cannot be overstated. The benefits of this

substitution of set of processes include increased mathematical accuracy, predefined fields and coding tasks, and de-emphasis of manual clerical labor in favor of labor adept in data processing. Reporting can be significantly automated, facilitating managerial power and control at a distance and the proliferation of global enterprises. The potential detriments are rarely accurately, completely, and timely addressed as information system vendors, management consultants, and corporate procurement teams race toward the popularly conceived state of the art. Systems are ballyhooed as continually improving in processing speed, functionality, and capacity. Users of these automated systems may not consider big picture effects, and they

may not intelligently consider the conduct risks to their own enterprises by concentrating such global reach and influence at high levels of senior management without dedicating adequate resources to verifying the accuracy, completeness, and timeliness of the information systems. This book considers these risks.

Hurt's Accounting Information Systems,

2e continues to take a fresh new approach that puts judgment and critical thinking, not technology, at the heart of the AIS course. Using a conversational writing style appealing to students, this book presents AIS as an art as much as a science. AIS is presented as a set of fundamental ideas and concepts that can be applied in various organisational contexts. Students are provided with vocabulary they will need to succeed in the profession and ensuring that they can communicate clearly and effectively about accounting information systems with both accountants and nonaccountants. The text end-of-chapter exercises and assessment tools are all competency-based, distilling knowledge to its essential elements and then encouraging students to use those

essential elements to think for themselves.
