Technology, Metaphor, and the Search for Meaning Basic Books
 “A provocative, exciting, and important rallying cry to reassert our human spirit of community and teamwork.”—Walter Isaacson
 Team Human is a manifesto—a fiery distillation of preeminent digital theorist Douglas Rushkoff’s most urgent thoughts on civilization and human nature. In one hundred lean and incisive statements, he argues that we are essentially social creatures, and that we achieve our greatest aspirations when we work together—not as individuals. Yet today society is threatened by a vast antihuman infrastructure that undermines our ability to connect. Money, once a means of exchange, is now a means of exploitation; education, conceived as way to elevate the working class, has become another assembly line; and the internet has only further divided us into increasingly atomized and radicalized groups. Team Human delivers a call to arms. If we are to resist and survive these destructive forces, we must recognize that being human is a team sport. In Rushkoff’s own words: “Being social may be the whole point.” Harnessing wide-ranging research on human evolution, biology, and psychology, Rushkoff shows that when we work together we realize greater happiness, productivity, and peace. If we can find the others who understand this fundamental truth and reassert our humanity—together—we can make the world a better place to be human.

 500 YEARS IN THE FUTURE, EARTH IS A PARADISE... WITHOUT US. The Earth was dying, and only the Erta could save it. Created to be genetically superior, hyper-intelligent and unburdened by the full range of human emotions, they succeeded by removing the cause: humans. Now the Erta are faced with a dilemma—if they reintroduce the rebellious and violent Homo sapiens, all of their work could be undone. They decide to raise one child: a sole human to decide if we should again inherit the Earth. But the quiet and clinical Ima finds that there is more to raising a human than she had expected; and there is more to humanity’s history than she has been told.

The Human Zoo National Geographic Books
 The book of human skin is a large volume with many pages of villainy writ upon it. There are people who are a disease, you know. 13 May, 1784, Venice: Minguillo Fasan, heir to the decaying, gothic Palazzo Espagnol, is born. Yet Minguillo is no ordinary child: he is strange, devious and all those who come near him are fearful. Twelve years later Minguillo is faced with an unexpected threat to his inheritance: a newborn sister, Marcella. His untempered jealousy will condemn his sister to a series of fates as a cripple, a madwoman and a nun. But in his insatiable quest to destroy her, he may have underestimated his sister’s ferocious determination, and her unlikely allies who will go to extraordinary lengths to save her...

From Ambiguophobia to Umpty -- 154 Words from Around the World for How We Feel Penguin
 Starred reviews from Publishers Weekly and Booklist * YALSA Top Ten Quick Pick for Reluctant Readers * ALA Best Fiction for Young Adults List * 2017 Rainbow A sharply honest and moving debut perfect for fans of *The Perks of Being a Wallflower* and *Ask the Passengers*. Riley Cavanaugh is many things: Punk rock. Snarky. Rebellious. And gender fluid. Some days Riley identifies as a boy, and others as a girl. But Riley isn’t exactly out yet. And between starting a new school and having a congressman father running for reelection in über-conservative Orange County, the pressure—media and otherwise—is building up in Riley’s life. On the advice of a therapist, Riley starts an anonymous blog to vent those pent-up feelings and tell the truth of what it’s really like to be a gender fluid teenager. But just as Riley’s starting to settle in at school—even developing feelings for a mysterious outcast—the blog goes viral, and an unnamed commenter discovers Riley’s real identity, threatening exposure. And Riley must make a choice: walk away from what the blog has created—a lifeline, new friends, a cause to believe in—or stand up, come out, and risk everything. From debut author Jeff Garvin comes a powerful and uplifting portrait of a modern teen struggling with high school,

relationships, and what it means to be a person.

Tales, Tools and Told You So's Doubleday
 Brandon Stanton’s new book, *Humans*—his most moving and compelling book to date—shows us the world. Brandon Stanton created *Humans of New York* in 2010. What began as a photographic census of life in New York City, soon evolved into a storytelling phenomenon. A global audience of millions began following HONY daily. Over the next several years, Stanton broadened his lens to include people from across the world. Traveling to more than forty countries, he conducted interviews across continents, borders, and language barriers. *Humans* is the definitive catalogue of these travels. The faces and locations will vary from page to page, but the stories will feel deeply familiar. Told with candor and intimacy, *Humans* will resonate with readers across the globe—providing a portrait of our shared experience.

A Book of Empathy Greenleaf Book Group
 “Rutherford describes [The Book of Humans] as being about the paradox of how our evolutionary journey turned ‘an otherwise average ape’ into one capable of creating complex tools, art, music, science, and engineering. It’s an intriguing question, one his book sets against descriptions of the infinitely amusing strategies and antics of a dizzying array of animals.”—The New York Times Book Review
 Publisher’s Note: The Book of Humans was previously published in hardcover as *Humanimal*. In this new evolutionary history, geneticist Adam Rutherford explores the profound paradox of the human animal. Looking for answers across the animal kingdom, he finds that many things once considered exclusively human are not: We aren’t the only species that “speaks,” makes tools, or has sex outside of procreation. Seeing as our genome is 98 percent identical to a chimpanzee’s, our DNA doesn’t set us far apart, either. How, then, did we develop the most complex culture ever observed? The Book of Humans proves that we are animals indeed—and reveals how we truly are extraordinary.

Human Compatible Farrar, Straus and Giroux
 A leading artificial intelligence researcher lays out a new approach to AI that will enable people to coexist successfully with increasingly intelligent machines.

The Fact-Packed Activity Book: Human Body St. Martin's Press
 A thoughtful, gleeful encyclopedia of emotions, both broad and outrageously specific, from throughout history and around the world. How do you feel today? Is your heart fluttering in anticipation? Your stomach tight with nerves? Are you falling in love? Feeling a bit miffed? Do you have the heebie-jeebies? Are you antsy with iktsuarpok or filled with nakhes? Recent research suggests there are only six basic emotions. But if that makes you feel uneasy, suspicious, and maybe even a little bereft, *The Book of Human Emotions* is for you. In this unique book, you’ll get to travel across the world and through time, learning how different cultures have articulated the human experience and picking up some fascinating new knowledge about yourself along the way. From the familiar (anger) to the foreign (zal), each entertaining and informative alphabetical entry reveals the surprising connections and fascinating facts behind our emotional lives. Whether you’re in search of the perfect word to sum up that cozy feeling you get from being inside on a cold winter’s night, surrounded by friends and good food (what the Dutch call gezelligheid), or wondering how nostalgia evolved from a fatal illness to enjoyable self-indulgence, Tiffany Watt Smith draws on history, anthropology, science, art, literature, music, and popular culture to find the answers. In reading *The Book of Human Emotions*, you’ll discover feelings you never knew you had (like basorexia, the sudden urge to kiss someone) and gain unexpected insights into why you feel the way you do. Besides, aren’t you curious what nginyiwarrarringu means?

Artificial Intelligence and the Problem of Control Abrams
 A strikingly original exploration of what it might mean to be authentically human in the age of artificial intelligence, from the author of the critically-acclaimed *Interior States*. “Meghan O’Giebly is a brilliant and humble philosopher, and her book is an explosively thought-provoking, candidly personal ride I wished never to end ... This book is such an original synthesis of ideas and disclosures. It introduces what will soon be called the O’Giebly genre of essay writing.” —Heidi Julavits, author of *The Folded Clock*
 For most of human history the world was a magical and enchanted place ruled by forces beyond our understanding. The rise of science and Descartes’s division of mind from world made materialism our ruling paradigm, in the process asking whether our own consciousness—i.e., souls—might be illusions. Now the inexorable rise of technology, with artificial intelligences that surpass our comprehension and control, and the spread of digital metaphors for self-understanding, the core questions of existence—identity, knowledge, the very nature and purpose of

life itself—urgently require rethinking. Meghan O’Giebly tackles this challenge with philosophical rigor, intellectual reach, essayistic verve, refreshing originality, and an ironic sense of contradiction. She draws deeply and sometimes humorously from her own personal experience as a formerly religious believer still haunted by questions of faith, and she serves as the best possible guide to navigating the territory we are all entering.

The Ten Types of Human Rosetta Books
 New York Times Bestseller A Summer Reading Pick for President Barack Obama, Bill Gates, and Mark Zuckerberg
 From a renowned historian comes a groundbreaking narrative of humanity’s creation and evolution—a #1 international bestseller—that explores the ways in which biology and history have defined us and enhanced our understanding of what it means to be “human.” One hundred thousand years ago, at least six different species of humans inhabited Earth. Yet today there is only one—homo sapiens. What happened to the others? And what may happen to us? Most books about the history of humanity pursue either a historical or a biological approach, but Dr. Yuval Noah Harari breaks the mold with this highly original book that begins about 70,000 years ago with the appearance of modern cognition. From examining the role evolving humans have played in the global ecosystem to charting the rise of empires, *Sapiens* integrates history and science to reconsider accepted narratives, connect past developments with contemporary concerns, and examine specific events within the context of larger ideas. Dr. Harari also compels us to look ahead, because over the last few decades humans have begun to bend laws of natural selection that have governed life for the past four billion years. We are acquiring the ability to design not only the world around us, but also ourselves. Where is this leading us, and what do we want to become? Featuring 27 photographs, 6 maps, and 25 illustrations/diagrams, this provocative and insightful work is sure to spark debate and is essential reading for aficionados of Jared Diamond, James Gleick, Matt Ridley, Robert Wright, and Sharon Moalem.

 Before he was Old-timer, he was Craig Emilson, a young doctor, sucked into military service at the outbreak of World War III. Enlisting to become a Special Forces suborbital paratrooper, Craig is selected to take part in the most important mission in American military history—a sortie into enemy territory to eliminate the world’s first strong Artificial Intelligence. The mission is only the beginning of Craig’s story, and for the story of humanity as well, as they accelerate towards a world that is post-human.

 The authors invited more than 100 journalists worldwide to use photographs, charts and essays to explore the world of big data and its growing influence on our lives and society.

The Surprising Truth About Moving Others Harper Collins
 This generously illustrated book tells the story of the human family, showing how our species’ physical traits and behaviors evolved over millions of years as our ancestors adapted to dramatic environmental changes. In *What Does It Mean to Be Human?* Rick Potts, director of the Smithsonian’s Human Origins Program, and Chris Sloan, National Geographic’s paleoanthropology expert, delve into our distant past to explain when, why, and how we acquired the unique biological and cultural qualities that govern our most fundamental connections and interactions with other people and with the natural world. Drawing on the latest research, they conclude that we are the last survivors of a once-diverse family tree, and that our evolution was shaped by one of the most unstable eras in Earth’s environmental history. The book presents a wealth of attractive new material especially developed for the Hall’s displays, from life-like reconstructions of our ancestors sculpted by the acclaimed John Gurche to photographs from National Geographic and Smithsonian archives, along with informative graphics and illustrations. In coordination with the exhibit opening, the PBS program *NOVA* will present a related three-part television series, and the museum will launch a website expected to draw 40 million visitors.

To Sell Is Human Penguin
 I am human I am a work in progress Striving to be the best version of ME From the picture book dream team behind *I Am Yoga* and *I Am Peace* comes the third book in their wellness series: *I Am Human*. A hopeful meditation on all the great (and challenging) parts of being human, *I Am Human* shows that it’s okay to make mistakes while also emphasizing the power of good choices by offering a kind word or smile or by saying “I’m sorry.” At its heart, this picture book is a celebration of empathy and compassion that lifts up the flawed fullness of humanity and encourages children to see themselves as part of one big

imperfect family—millions strong.

The Dawn of Everything Farrar, Straus and Giroux

Readers who love vampire romances will be thrilled to devour *Team Human* by Justine Larbalestier and Sarah Rees Brennan. *Team Human* celebrates and parodies the *Twilight* books, as well as other classics in the paranormal romance genre. Mel is horrified when Francis Duvarney, arrogant, gorgeous, and undead, starts at her high school. Mel's best friend, Cathy, immediately falls for the vampire. Cathy is determined to be with him forever, even if having him turn her could inadvertently make her a zombie. And Mel is equally determined to prove to her BFF that Francis is no good, braving the city's vampire district and kissing a cute boy raised by vampires as she searches evidence in this touching and comic novel.

Complete Book of the Human Body Simon and Schuster

A public policy leader addresses how artificial intelligence is transforming the future of labor—and what we can do to protect the role of workers. As computer technology advances with dizzying speed, human workers face an ever-increasing threat of obsolescence. In *Human Work In the Age of Smart Machines*, Jamie Merisotis argues that we can—and must—rise to this challenge by preparing to work alongside smart machines doing that which only humans can: thinking critically, reasoning ethically, interacting interpersonally, and serving others with empathy. The president and CEO of Lumina Foundation, Merisotis offers a roadmap for the large-scale, radical changes we must make in order to find abundant and meaningful work for ourselves in the 21st century. His vision centers on developing our unique capabilities as humans through learning opportunities that deliver fair results and offer a broad range of credentials. By challenging long-held assumptions and expanding our concept of work,

Merisotis argues that we can harness the population's potential, encourage a deeper sense of community, and erase a centuries-long system of inequality.

Symptoms of Being Human The Book of Humans A Brief History of Culture, Sex, War, and the Evolution of Us

"It was an exceptional winter." With deceptive understatement, Orly Castel-Bloom draws back the curtain on her disturbing, revelatory novel set in Israel during the Al Aksa intifada. This is a world already regularly interrupted by terrorist ambushes and suicide bombs. And now it is further plagued by a Saudi flu that is decimating the population, and by apocalyptic weather that brings a ruinous winter after eight years of drought. The economy is shot to pieces. Hail stones as big as dinner plates are falling from the sky. And yet, against this backdrop of monumental affliction, ordinary people are still trying to lead normal lives. Kati Beit-Halahmi, an impoverished cleaner, is snatched up by a community television program and given her full fifteen-minutes-of-fame. Iris Ventura, divorced with three children, is wondering how she can afford both to replace her broken washing machine and have some essential dental work done. And the Israeli president, Reuven Tekoa, travels from hospital to funeral, musing on the state of the nation from the back of his limousine. Orly Castel-Bloom spins a web of filament-fine connections between her characters whose preoccupations, she reminds us, are not so very different from our own. Death or disaster might intrude at any moment, but people still watch game shows on TV, go to the laundromat and train to be beauticians.

Human Work in the Age of Smart Machines David R. Godine Publisher

The epic story and ultimate big history of how human society evolved from intimate chimp communities into the sprawling

civilizations of a world-dominating species. If a chimpanzee ventures into the territory of a different group, it will almost certainly be killed. But a New Yorker can fly to Los Angeles—or Borneo—with very little fear. Psychologists have done little to explain this: for years, they have held that our biology puts a hard upper limit—about 150 people—on the size of our social groups. But human societies are in fact vastly larger. How do we manage—by and large—to get along with each other? In this paradigm-shattering book, biologist Mark W. Moffett draws on findings in psychology, sociology and anthropology to explain the social adaptations that bind societies. He explores how the tension between identity and anonymity defines how societies develop, function, and fail. Surpassing *Guns, Germs, and Steel* and *Sapiens*, *The Human Swarm* reveals how mankind created sprawling civilizations of unrivaled complexity—and what it will take to sustain them.

BEING HUMAN BEING the Philosophy of Existence Sterling Publishing (NY)

The *Waltham Book of Human-Animal Interaction: Benefits and Responsibilities of Pet Ownership* discusses the scientific study of the relationship between man and animals, focusing on the behavior of companion animals, and how humans and animals affect each other's behavior. This first half of this book discusses research on benefits that have been found to accumulate from associations with animals, and the role of animals in care and therapy program. The responsibilities toward the animals kept, and how to enhance their care and welfare are considered in the next chapters. The human response to pet loss is also elaborated. This publication is beneficial to veterinary students and individuals concerned with the study of human-animal interactions.
