All electrical wiring and devices have an amperage, or amp, rating. This is the maximum amount of electrical current they can safely carry. Most standard household circuits are rated for 15 amps or 20 amps, while large-appliance circuits (such as for electric dryers and ranges) may be rated for 30, 40, 50 amps, or even more.

Choice of cable for outside lights. | ElectriciansForums.net

Welcome to ElectriciansForums.net - The American Electrical Advice Forum Head straight to the main forums to chat by click here: American Electrical Advice Forum What type of cable is best suited for outside lights, bearing in mind I do not want to use SWA or cable in conduits; just clip on to external wall, exposed to all elements of nature.

Welcome to Wire it yourself.com - Do it yourself, DIY home ...

I just joined the forum. I got the same chopper at Fry's. Already broke the landing gear. If your heli rotates in air without your control, the instruction booklet that came with it suggests using a screw driver to turn the adjustment screw on the heli's circuit board -turn it clockwise to cause heli to rotate counterclockwise and visa versa.

[Welcome To Electrician U - Electrical Training Made By Electricians For Electricians](#)

Electrical wiring comes in different gauges, or sizes. The heavier the gauge, i.e., the thicker the copper wire, the more electrical current it can carry without overheating. Electrical wire and circuit breakers are designed to work in tandem with one another, and each must be of a proper corresponding size.
