In addition, Basic Plumbing.

HomeSkills: Plumbing Cengage AU

Modern plumbing as a trade is the arranging and running of pipes to supply pure water to buildings, the erecting of fixtures for the use of this supply, and the installing of other pipes for the resulting waste water. The work of the trade divides itself therefore into two parts: first the providing an adequate supply of water; and second, the disposing of this water after use. The first division offers few problems to the plumber, little variety in the layout being possible, and the result depending mostly upon the arrangement of the pipes and fittings; but the second division calls for careful study in the arrangement, good workmanship in the installing, and individual attention to each fixture. The trade had its beginnings in merely supplying fresh water to a community. This was done by means of trenching, or conveying water from lakes, rivers, or springs through wooden pipes or open troughs. By easy stages the trade improved and enlarged its scope, until at the present time it is able to provide for the adequate distribution of tons of water under high pressure furnished by the city water works. In the early years of the trade the question of the disposal of the waste water was easily answered, for it was allowed to be discharged onto the ground to seek its own course. But with the increased amount of water available, the waste-water problem has enlarged until today it plays the most important part of plumbing, and the trade has had to change to meet this waste-water problem. The first simple system of a pipe running from the sink to a point outside the building was sufficient. As larger buildings came into use and communities were more thickly populated, the plumbing problem demanded thought and intense study. The waste pipes from fixtures had to be so arranged that it would be impossible for foul odors and germ-laden air to enter the building through a plumbing fixture. The importance of this is evidenced by the plumbing laws now in use throughout the country. One of the first plumbing fixtures put into common use was a

hollowed-out stone which served as a sink. It was with considerable interest that the writer saw a sink of this kind in actual use in the summer of 1915, at a house in a New England village. This sink had been in service for about 100 years. From this beginning the well-known fixtures of today have developed. The demand for moderate priced, sanitary closets, lavatories, and baths has led to the rapid improvement seen in plumbing fixtures. In the development of these fixtures, as soon as a bad feature was recognized the fixture was at once discarded, until now the market offers fixtures as mechanically fine as can be produced. Plumbing fixtures were at first manufactured so that it was necessary to support them on a wooden frame, and this frame was enclosed in wood. The enclosure made by this framework soon became foul and filthy and a breeding place for all kinds of disease germs and vermin. This bad feature was overcome by the introduction of open plumbing, that is, fixtures so made that the enclosure of wood could be done away with. The open plumbing allowed a free circulation of air around the fixture and exposed pipes, thereby making the outside of the fixture and its immediate surroundings free from all the bad features of the closed plumbing. Plenty of fresh air and plenty of light are necessary for good sanitary plumbing.

Basic Plumbing Service Skills - Roof Plumbing Sai ePublications via PublishDrive

Basic Plumbing Techniques

Assuming no prior knowledge of plumbing skills, Steve Muscroft - the author of the 6129 Certificate in Basic Plumbing from City & Guilds - takes the reader step by step through the requirements of the 6129 qualification at Level 2. This highly practical, student-focussed text, also provides all the necessary underpinning knowledge required for the 6089 NVQ at Level 2, making it essential reading for apprentices, as well as serving as a useful reference for practicing plumbers. The reader will be guided through each of the key areas and processes in the field of Plumbing, with additional emphasis on Health & Safety. The book fully covers the syllabus requirements for the Level 2 Technical Certificate and NVQ, and readers will find topics essential to actual plumbing practice, not included as part of the Level 2 specifications, are also introduced, such as gas fired boilers, service and maintenance aspects, and reference to the Water Regulations (1999). All material is fully in line with latest British Standards (BS 6700 and BS800). The book is designed to maximise accessibility of

the text for the reader. Activities feature per topic area covered, to allow application of theory into practical contexts, along with 'Test Yourself' questions at the end of each chapter for use during college / centre training. These can also be compiled into the student's portfolio as evidence of learning. Each chapter concludes with a set of multiple choice questions, following the style of the City & Guilds knowledge assessment, enabling the student to revise the key concepts introduced in that chapter. These MCQs will also prove essential preparation for the 6129 Technical Certificate exam. Model answers and answers to Activities are included for reference. * Content matched specifically to the latest plumbing qualifications from City & Guilds - the 6129 Certificate in Basic Plumbing and 6089 NVQ at Level 2. * Written by the author of the City & Guilds 6129 scheme * Brand new textbook resource with essential pedagogical features: activities, 'test yourself' questions; MCQs; and model answers
