Written in a style that emphasizes readability and usefulness for the numerical methods novice, the book begins with basic,

elementary material and gradually builds up to more advanced topics. A selection of concepts required for the study of computational mathematics is introduced, and simple approximations using Taylor's Theorem are also treated in some depth. The text includes exercises that run the gamut from simple hand computations, to challenging derivations and minor proofs, to programming exercises. A greater emphasis on applied exercises as well as the cause and effect associated with numerical mathematics is featured throughout the book. An Introduction to Numerical Methods and Analysis is the ideal text for students in advanced undergraduate mathematics and engineering courses who are interested in gaining an understanding

of numerical methods and numerical analysis.

In 1967, this revolutionary work exposed the depths of systemic racism in this country and provided a radical political framework for reform: true and lasting social change would only be accomplished through unity among African-Americans and their independence from the preexisting order. An eloquent document of the civil rights movement that remains a work of profound social relevance 25 years after it was first published.

In this work Tim Ingold offers a persuasive new approach to understanding how human beings perceive their surroundings. He argues that what we are used to calling cultural variation consists, in the first place, of variations in skill. Neither innate nor acquired, skills are grown, incorporated into the human organism through practice and training in an environment. They are thus as much biological as cultural. To account for the generation of skills we have therefore to understand the dynamics of development. And this in turn calls for an ecological approach that situates practitioners in the context of an active engagement with the constituents of their surroundings. The

twenty-three essays comprising this book focus in turn on the procurement of livelihood, on what it means to 'dwell', and on the nature of skill, weaving together approaches from social anthropology, ecological psychology, developmental biology and phenomenology in a way that has never been attempted before. The book is set to revolutionise the way we think about what is 'biological' and 'cultural' in humans, about evolution and history, and indeed about what it means for human beings – at once organisms and persons – to inhabit an environment. The Perception of the Environment will be essential reading not only for anthropologists but also for biologists, psychologists, archaeologists, geographers and philosophers. This

edition includes a new Preface by the author.

A People's Constitution Routledge "Why has the valley of Kashmir, famed for its beauty and tranquillity, become a major flashpoint, threatening the stability of a region of great strategic importance and challenging the integrity of the Indian state? This book examines the Kashmir conflict in its historical context, from the period when the valley was an independent kingdom right up to the struggles of the present day. Located on the borders of China, Central Asia and the Sub-Continent, the insurgency in the valley has also created serious tensions between India and Pakistan. Drawing upon research in India and Pakistan, as well as historical sources, this book traces the origins of the state in the 19th

century and the controversial "sale" by the British of the predominantly Muslim valley to a Hindu Maharaja in 1846. Through an exploration of the implications for Kashmir of independence in 1947, it gives a critical account of why, for Kashmir, self-determination may seem a more attractive option than affiliation to a larger multi-racial whole."--

The systems of innovation approach is considered by many to be a useful analytical approach for better understanding innovation processes as well as the production and distribution of knowledge in the economy. It is an appropriate framework for the empirical study of innovations in their contexts

and is relevant for policy makers. This text is the result of the work within an international inter-disciplinary network or "working seminar" with the task of building a more solid and sophisticated conceptual and theoretical foundation for the continued study of innovations in a systemic context. The book has three parts. The first presents an overview and tries to work out some conceptual problems. In the second, the systems of innovation approach is related to innovation theory. Part three is devoted to increasing understanding of the functioning and dynamics of systems of innovation. There is also an introduction where the genesis and anatomy of different systems of innovation approaches are discussed and where the systems of innovation approach is

characterized in nine dimensions.

This book explores the emergence of digital humanities in the Indian context. It looks at how online and digital resources have transformed classroom and research practices. It examines some fundamental questions: What is digital humanities? Who is a digital humanist? What is its place in the Indian context? The chapters in the volume: • study the varied practices and pedagogies involved in incorporating the 'digital' into traditional classrooms; • showcase how researchers across disciplinary lines are expanding their scope of research, by adding a 'digital' component to update their curriculum to contemporary times; • highlight how this

has also created opportunities for researchers to push the boundaries of their pedagogy and encouraged students to create 'live projects' with the aid of digital platforms; and • track changes in the language of research, documentation, archiving and reproduction as new conversations are opening up across Indian languages. A major intervention in the social sciences and humanities, this book will be of great interest to scholars and researchers of media studies, especially new and digital media, education, South Asian studies and cultural studies.

Archival Silences demonstrates emphatically that archival absences exist all over the globe. The book questions whether benign 'silence' is an appropriate label for the variety of destructions, concealment and absences that can be identified within archival collections. Including contributions from

archivists and scholars working around the world, this truly international collection examines archives in Australia, Brazil, Denmark, England, India, Iceland, Jamaica, Malawi, The Philippines, Scotland, Turkey and the United States. Making a clear link between autocratic regimes and the failure to record often horrendous crimes against humanity, the volume demonstrates that the failure of governments to create records, or to allow access to records, appears to be universal. Arguing that this helps to establish a hegemonic narrative that excludes the 'other', this book showcases the actions historians and archivists have taken to ensure that gaps in archives are filled. Yet the book also claims that silences in archives are

inevitable and argues not only that recordkeeping should be mandated by international courts and bodies, but that we need to develop other ways of reading archives broadly conceived to compensate for absences. Archival Silences addresses fundamental issues of access to the written record around the world. It is directed at those with a concern for social justice, particularly scholars and students of archival studies, history, sociology, international relations, international law, business administration and information science. **Liberties and Commons for All** West Group

The Absorbent Mind was Maria Montessori's most in-depth work on her educational theory, based on decades of scientific observation of children. Her

view on children and their absorbent minds was a landmark departure from the educational model at the time. This book helped start a revolution in education. The Three Worlds of Welfare Capitalism

Beacon Press

New from the No. 1 Sunday Times We feel more divided than ever. This riveting analysis tells you why. Walls are going up. Nationalism and identity politics are on the rise once more. Thousands of miles of fences and barriers have been erected in the past ten years, and they are redefining our political landscape. There are many reasons why we erect

walls, because we are divided in many ways: wealth, race, religion, politics. In Europe the ruptures of the past decade threaten not only European unity, but in some countries liberal democracy itself. In China, the Party's need to contain the divisions wrought by capitalism will define the nation's future. In the USA the rationale for the Mexican border wall taps into the fear that the USA will no longer be a white majority country in the course of this century. Understanding what has divided us, past and present, is essential to understanding much of what's going on in the world today. Covering China; the USA; Israel and Palestine; the Middle East; the Indian Subcontinent; Africa; Europe and the UK, bestselling author Tim Marshall presents a gripping and unflinching analysis of the

fault lines that will shape our world for years to come.

Undoing Gender constitutes Judith Butler's recent reflections on gender and sexuality, focusing on new kinship, psychoanalysis and the incest taboo, transgender, intersex, diagnostic categories, social violence, and the tasks of social transformation. In terms that draw from feminist and queer theory,

Butler considers the norms that govern--and fail to govern--gender and sexuality as they relate to the constraints on recognizable personhood. The book constitutes a reconsideration of her earlier view on gender performativity from *Gender Trouble*. In this work, the critique of gender norms is clearly situated within the framework of human persistence and survival. And to "do" one's gender in certain ways sometimes implies "undoing" dominant notions of personhood. She writes about the "New Gender Politics" that has emerged in recent years, a combination of movements concerned with transgender, transsexuality, intersex, and their complex relations to feminist and queer theory.

From the nineteenth century to the twenty-first, cannabis legislation in America and racism have been inextricably linked. In this searing nonfiction graphic novel, Box Brown sets his sights on this timely topic. Mexico, 1519 CE. During the Spanish conquests Cortés introduced hemp farming as part of his violent colonial campaign. In secret, locals began cultivating the plant for consumption. It eventually made its way to the United States through the immigrant labor force where it was shared with black laborers. It doesn't take long for American lawmakers to decry cannabis as the vice of "inferior races." Enter an era of propaganda designed to feed a moral panic about the dangers of a plant that had been used

by humanity for thousands of years. Cannabis was given a schedule I classification, which it shared with drugs like heroin. This opened the door for a so-called "war on drugs" that disproportionately targeted young black men, leaving hundreds of thousands in prison, many for minor infractions. With its roots in "reefer madness" and misleading studies into the effects of cannabis, America's complicated and racialized relationship with marijuana continues to this day. Author Box Brown delves deep into this troubling history and offers a rich, entertaining, and thoroughly researched graphic essay on the legacy of cannabis legislation in America.
