GREEN BUILDING:

PRINCIPLES AND PRACTICES IN RESIDENTIAL CONSTRUCTION provides a current, comprehensive guide to this exciting, emerging field. From core concepts to innovative applications of cutting-edge technology and the latest industry trends, this text offers an in-depth introduction to the construction of green homes. Unlike many texts that adopt a product-oriented approach, this book emphasizes the crucial planning, processes, and execution methods necessary for effective, environmentally sound construction. This text demonstrates that Earth-friendly products and energy-efficient materials take planning in order to make a building truly green. This visionary text helps students and professionals develop the knowledge and skills to

think green from start to finish, empowering and inspiring them to build truly sustainable homes. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version.

*Where the Wind Blows Us* unites critical practice with a community-based approach to archaeology. Author Natasha Lyons describes an inclusive archaeology that rests on a flexible but rigorous approach to research design and demonstrates a responsible, ethical practice. She traces the rise and application of community archaeologies, develops a wide-ranging set of methods for community practice, and maps out a "localized critical theory" that is suited to the needs of

local and descendant communities as they pursue self-defined heritage goals. Localized critical theory aims to decenter the focus on global processes of capitalism in favor of the local processes of community dynamics. *Where the Wind Blows Us* emphasizes the role of individuals and the relationships they share with communities of the past and present. Lyons offers an extended case study of her work with the Inuvialuit community of the Canadian Western Arctic. She documents the development of this longstanding research relationship and presents both the theoretical and practical products of the work to date. Integrating knowledge drawn from archaeology, ethnography, oral history, and community interviews, Lyons utilizes a multivocal approach that actively listens to Inuvialuit speak about their rich and textured history. The overall significance of this volume lies in outlining a method of practicing archaeology that embraces local ways of knowing with a critically constructed and evolving methodology that is responsive to community

needs. It will serve as a handbook to mine for elements of critical practice, a model of community-based archaeology, and a useful set of concepts and examples for classroom study.
