 This book examines the conceptual development of control in the literature of both management and accounting disciplines, from 1900 to 1980. In order to portray the development of control concepts over time, the chapters are organized into sections relating to the schools of thought from which they emanated and a model of control is constructed to represent each group of concepts and their hypothesised inter-relationships. Having traced the development of control models a comparative analysis of historical development in the two streams of

management and accounting literature is undertaken. This analysis reveals a pronounced lag of accounting development behind that of management literature. The reasons for this are then discussed.

"It's not your money - it belongs to the people." Taking this simple axiom seriously creates unique challenges for the management of public funds. Andrew Graham outlines all aspects of public sector financial management, addressing how funds are obtained, what rules of accountability and accounting are applied, who controls public funds, what constitutes effective budget management at

the operational level, and how accountability and oversight are dealt with. The skills demanded of public sector managers in financial management are becoming increasingly onerous and complex. Canadian Public Sector Financial Management will be of great help to practitioners in the public sector who wish to better understand their financial responsibilities as well as to students of public administration and the general reader concerned with public financial management issues. The second edition of Canadian Public-Sector Financial Management updates the widely used text, reflecting on the developments in public financial management over the

past six years. Developments in financial reporting and the widespread need for governments to constrain growth and manage their finances more closely are looked at. It remains focused on the practitioner and manager in the public sector.
