Proceedings of the International

Conference Frascati, Italy, September 13-17, 1982 Springer Concurrent Engineering is based on the concept that different phases of a product life cycle should be conducted concurrently and initiated as early as possible within the Product Creation Process (PCP). Its main goal is to increase the efficiency and effectiveness of the PCP and reduce errors in the later stages, and to incorporate considerations for the full lifecycle, through-life operations, and environmental issues of the product. It has become the substantive basic methodology in many industries, and the initial basic concepts have matured and become the foundation of many new ideas, methodologies, initiatives, approaches and tools. This book

presents the proceedings of the 24th ISPE Inc. International Conference on Transdisciplinary (formerly: Concurrent) Engineering (TE 2017), held in Singapore, in July 2017. The 120 peer-reviewed papers in the book are divided into 16 sections: air transport and traffic operations and management; risk-aware supply chain intelligence; product innovation and marketing management; human factors in design; human engineering; design methods and tools; decision supporting tools and methods; concurrent engineering; knowledge-based engineering; collaborative engineering; engineering for sustainability; service design; digital manufacturing; design automation; artificial intelligence and data analytics; smart systems and the Internet of

Things. The book provides a comprehensive overview of recent advances in transdisciplinary concurrent engineering research and applications, and will be of interest to researchers, design practitioners and educators working in the field.

This authoritative account covers the

entire spectrum from iron ore to finished steel. It begins by tracing the history of iron and steel production, right from the earlier days to today's world of oxygen steelmaking, electric steelmaking, secondary steelmaking and continuous casting. The physicochemical fundamental concepts of chemical equilibrium, activity-composition relationships, and structure-properties of molten metals are introduced before going into details of transport phenomena, i.e. kinetics, mixing and mass transfer in ironmaking and steelmaking processes. Particular emphasis is laid on the understanding of the fundamental principles of the processes and their application to the optimisation of actual processes. Modern developments in blast furnaces,

including modelling and process control are discussed along with an introduction to the alternative methods of ironmaking. In the area of steelmaking, BOF plant practice including pre-treatment of hot metal, metallurgical features of oxygen steelmaking processes, and their control form part of the book. It also covers basic open hearth, electric arc furnace and stainless steelmaking, before discussing the area of casting of liquid steel—ingot casting, continuous casting and near net shape casting. The book concludes with a chapter on the status of the ironmaking and steelmaking in India. In line with the application of theoretical principles, several worked-out examples dealing with fundamental principles as applied to actual plant situations are presented.

The book is primarily intended for undergraduate and postgraduate students of metallurgical engineering. It would also be immensely useful to researchers in the area of iron and steel. Maiden's Prayer Springer Science & Business Media

Before you can influence decisions, you need to understand what drives them. In The Choice Factory, Richard Shotton sets out to help you learn. By observing a typical day of decision-making, from trivial food choices to significant work-place moves, he investigates how our behaviour is shaped by psychological shortcuts. With a clear focus on the marketing potential of knowing what makes us tick, Shotton has drawn on evidence from academia, real-life ad campaigns and his own original

research. The Choice Factory is written in an entertaining and highly-accessible format, with 25 short chapters, each addressing a cognitive bias and outlining simple ways to apply it to your own marketing challenges. Supporting his discussion, Shotton adds insights from new interviews with some of the smartest thinkers in advertising, including Rory Sutherland, Lucy Jameson and Mark Earls. From priming to the pratfall effect, charm pricing to the curse of knowledge, the science of behavioural economics has never been easier to apply to marketing. The Choice Factory is the new advertising essential.

Heavy metals are severe environmental pollutants, and many of them are toxic

even at very low concentrations. With industrial development, soil pollution with heavy metal elements have dramatically increased. The uptake of heavy metals via plants that are exposed to contaminated soils is a risk for human health and a major hazard for the ecosystem as a whole, including soil microorganisms. On the other hand, plants may be used in the decontamination of soils. The topics presented in this book include: sources of heavy metals contaminants in soils; plant species that can grow on contaminated soils; the phytoremediation of contaminated soils; tolerance, accumulation and detoxification mechanisms of zinc, copper, arsenic, cadmium and vanadium in plants; the critical role of sulfur

metabolism in heavy metal tolerance; the role of aquatic macrophytes, plant growth-promoting bacteria, sugar crops and earthworms in detoxification; and heavy metal stabilization by promoting zeolite synthesis in soils.

Based on the author's lectures to graduate students of geosciences, physics, chemistry and materials science, this didactic handbook covers basic aspects of ceramics such as composition and structure as well as such advanced topics as achieving specific functionalities by choosing the right materials. The focus lies on the

thermal transformation processes of natural raw materials to arrive at traditional structural ceramics and on the general physical principles of advanced functional ceramics. The book thus provides practice-oriented information to readers in research, development and engineering on how to understand, make and improve ceramics and derived products, while also serving as a rapid reference for the practitioner. The choice of topics and style of presentation make it equally useful for chemists, materials scientists, engineers and mineralogists.

This collection of portraits has been

created in the name of Teenage Cancer Trust and predominantly features those artists who have supported the charity over the years, whether taking part in the annual Royal Albert Hall shows, visiting wards, donating a multitude of gifts from signed amps to signed sunglasses or getting involved in projects such as Love Music Love Food. Artists new to the charity have become involved with the project and their relationship with Teenage Cancer Trust started here at Love Music Love Food. It's a great testament to Teenage Cancer Trust that these artists feel passionately about supporting the charity to the point that they'll be smothered in Marmite, have their knees nibbled by sheep, cuddle chickens or get pelted with Dayglo cupcakes to help make a

difference. Dig in to the food that makes the stars shine - starring Brett Anderson, Johnny Borrell, Buzzcocks, Biffy Clyro, Roger Daltrey CBE, Brandon Flowers, Noel Gallagher, Ellie Goulding, Professor Green, Mick Hucknall, Kelly Jones, Alex Kapranos, Kasabian, Juliette Lewis, Madness, Mani, Brian May, Paul Oakenfold, Sir Cliff Richard, Francis Rossi OBE, Siouxsie Sioux, Sugababes, Tinie Tempah, Bullet For My Valentine, White Lies, We Are Scientists, Paul Weller, Rob Zombie & many more.

Soil Conditions and Plant Growth

Building on the extremely successful and popular Russell's Soil Conditions and Plant Growth, Wiley-Blackwell is pleased to publish this completely revised and updated edition of the soil science

classic. Covering all aspects of the interactions between plant and soil, Peter Gregory and Stephen Nortcliff, along with their team of internationally-known and respected authors, provide essential reading for all students and professionals studying and working in agriculture and soil science. Subject areas covered range from crop science and genetics; soil fertility and organic matter; nitrogen and phosphorus cycles and their management; properties and management of plant nutrients; water and the soil physical environment and its management; plants and change processes in soils; management of the soil/plant system; and new challenges including food, energy and water security in a changing environment. Providing a very timely account on how

better to understand and manage the many interactions that occur between soils and plants, *Soil Conditions and Plant Growth* is sure to become the book of choice - as a recommended text for students and as an invaluable reference for those working or entering into the industry. An essential purchase for all universities and research establishments where agricultural, soil, and environmental sciences are studied and taught.

Technology, Logic Design and CAD Tools
Springer Science & Business Media

The power consumption of microprocessors is one of the most important challenges of high-performance chips and portable devices. In chapters drawn from Pigué's recently published *Low-Power Electronics Design*,

Low-Power CMOS Circuits: Technology, Logic Design, and CAD Tools addresses the design of low-power circuitry in deep submicron technologies. It provides a focused reference for specialists involved in designing low-power circuitry, from transistors to logic gates. The book is organized into three broad sections for convenient access. The first examines the history of low-power electronics along with a look at emerging and possible future technologies. It also considers other technologies, such as nanotechnologies and optical chips, that may be useful in designing integrated circuits. The second part explains the techniques used to reduce power consumption at low levels. These include clock gating, leakage reduction, interconnecting and communication on

chips, and adiabatic circuits. The final section discusses various CAD tools for designing low-power circuits. This section includes three chapters that demonstrate the tools and low-power design issues at three major companies that produce logic synthesizers. Providing detailed examinations contributed by leading experts, Low-Power CMOS Circuits: Technology, Logic Design, and CAD Tools supplies authoritative information on how to design and model for high performance with low power consumption in modern integrated circuits. It is a must-read for anyone designing modern computers or embedded systems.

A fierce war rages for your soul. Are you ready for battle? Like it or not, you are at

war. You face a powerful enemy out to destroy you. You live on the battlefield, so you can't escape the conflict. It's a spiritual war with crucial consequences in your everyday life and its outcome will determine your eternal destiny. You must engage the Enemy. And as you fight, you need a Manual for Spiritual Warfare. This guide for spiritual warriors will help you recognize, resist, and overcome the Devil's attacks. Part One, "Preparing for Battle," answers these critical questions: • Who is Satan, and what powers does he have? • What are his typical strategies? • Who fights him alongside us in battle? • What spiritual weapons and armor do we possess? • How do we keep the Enemy out of our camp? Part Two, "Aids in Battle," provides you these essential resources:

- Teaching about spiritual warfare from Scripture and Church documents • Scripture verses for battle • Wisdom and inspiration from saints who fought Satan
- Prayers for protection, deliverance, and victory • Rosary meditations, hymns, and other devotions for spiritual combat

St. Paul urges us to "fight the good fight of the faith" (1 Tim 6:12). Take this Manual for Spiritual Warfare with you into battle. The beautiful Premium UltraSoft gift edition features sewn binding, ribbon marker and silver edges.

Japanese management is currently considered to be in crisis. This book analyzes the degree to which the Japanese management model is

changing, in order to regain its competitiveness. It brings together up-to-date research on this important topic by a number of the best known American, Asian and European scholars of Japanese management. A broad variety of management areas such as strategy, corporate governance, globalization, organization, finance, HRM, production, innovation, organizational learning and retailing is covered.

Animal Cell Biotechnology: Methods and
Protocols, Third Edition constitutes a
comprehensive manual of state-of-the-
art and new techniques for setting up
mammalian cell lines for production of

biopharmaceuticals, and for optimizing
critical parameters for cell culture from
lab to final production. The volume is
divided into five parts that reflect the
processes required for different stages of
production. In Part I, basic techniques for
establishment of production cell lines are
addressed, especially high-throughput
synchronization, insect cell lines,
transient gene and protein expression,
DNA Profiling and Characterisation. Part
II addresses tools for process and
medium optimization as well as
microcarrier technology while Part III
covers monitoring of cell growth,
viability and apoptosis, metabolic flux
estimation, quenching methods as well
as NMR-based techniques. Part IV details
cultivation techniques, and Part V
describes special applications, including

vaccine production, baculovirus protein expression, chromatographic techniques for downstream as well as membrane techniques for virus separation. Written in the successful Methods in Molecular Biology series format, chapters include introductions to their respective topics, lists of the necessary materials and reagents, step-by-step, readily reproducible protocols, and notes on troubleshooting and avoiding known pitfalls. *Animal Cell Biotechnology: Methods and Protocols, Third Edition* provides a compendium of techniques for scientists in industrial and research laboratories that use mammalian cells for biotechnology purposes.

This book is devoted to the dynamic

development of retailing. The focus is on various strategy concepts adopted by retailing companies and their implementation in practice. This is not a traditional textbook or collection of case studies; it aims to demonstrate the complex and manifold questions of retail management in the form of twenty lessons, where each lesson provides a thematic overview of key issues and illustrates them via a comprehensive case study. The examples are all internationally known retail companies, to facilitate an understanding of what is involved in strategic retail management and illustrate best practices. In the third edition, all chapters were revised and updated. Two new chapters were added to treat topics like corporate social responsibility as well as marketing

communication. All case studies were replaced by new ones to reflect the most recent developments. Well-known retail companies from different countries, like Tesco, Zalando, Hugo Boss, Carrefour, Amazon, Otto Group, are now used to illustrate particular aspects of retail management.

An eye-opening guide to the world's best parenting strategies Research reveals that American kids lag behind in academic achievement, happiness, and wellness. Christine Gross-Loh exposes culturally determined norms we have about "good parenting," and asks, Are there parenting strategies other countries are getting right that we are not? This book takes us across the globe and examines how parents successfully foster resilience, creativity, independence, and academic excellence in their children. Illuminating the surprising ways in which culture shapes

our parenting practices, Gross-Loh offers objective, research-based insight such as: Co-sleeping may promote independence in kids. “Hoverparenting” can damage a child’s resilience. Finnish children, who rank among the highest academic achievers, enjoy multiple recesses a day. Our obsession with self-esteem may limit a child’s potential. *Air Corps Technical School* Newnes Geneticists and molecular biologists have been interested in quantifying genes and their products for many years and for various reasons (Bishop, 1974). Early molecular methods were based on molecular hybridization, and were devised shortly after Marmur and Doty (1961) first showed that denaturation of the double helix could be reversed - that the process of molecular reassociation

was exquisitely sequence dependent. Gillespie and Spiegelman (1965) developed a way of using the method to titrate the number of copies of a probe within a target sequence in which the target sequence was fixed to a membrane support prior to hybridization with the probe - typically a RNA. Thus, this was a precursor to many of the methods still in use, and indeed under development, today. Early examples of the application of these methods included the measurement of the copy numbers in gene families such as the ribosomal genes and the immunoglobulin family. Amplification of genes in tumors and in response to drug treatment was discovered by this method. In the same period, methods were invented for estimating gene num

bers based on the kinetics of the reassociation process - the so-called Cot analysis. This method, which exploits the dependence of the rate of reassociation on the concentration of the two strands, revealed the presence of repeated sequences in the DNA of higher eukaryotes (Britten and Kohne, 1968). An adaptation to RNA, Rot analysis (Melli and Bishop, 1969), was used to measure the abundance of RNAs in a mixed population.
