Pakistan's cotton, textile, and apparel industries are key sectors of the nation's economy; their performance can contribute to either a rise or fall in poverty. These vital industries have faced a variety of challenges and opportunities in recent years, including world cotton price instability, liberalization of the multilateral clothing and textile trade, and sharp swings in the Pakistani macroeconomic situation. Using a computable general equilibrium (CGE) model and drawing on a national survey of Pakistani households, the authors of this report evaluate the consequences of several recent or prospective economic changes on Pakistan's cotton, textile, and apparel industries and poverty levels. The economic changes include an increased inflow of foreign capital, higher world cotton and textile prices, government subsidization of the textile industry, increased productivity in the cotton and textile sectors, and other possible developments. By presenting these scenarios, the report offers policymakers and analysts a guide to anticipating and shaping the future of economic growth and poverty reduction in Pakistan.

And what makes people happy? From data about our societies and populations, through measures of the fuels and foods that energize them, to the impact of transportation and inventions of our modern world--and how all of this affects the planet itself--in Numbers Don't Lie, Vaclav Smil takes us on a fact-finding adventure, using surprising statistics and illuminating graphs to challenge conventional thinking. Packed with fascinating information and memorable examples, Numbers Don't Lie reveals how the US is leading a rising worldwide trend in chicken consumption, that vaccination yields the best return on investment, and why electric cars aren't as great as we think (yet). This review describes accountability arrangements to combat corruption in the infrastructure sector. The sustainability of the livelihoods of the poor in low- and middle-income countries is compromised by corruption in the delivery of infrastructure

services. Such services include water supply, sanitation, drainage, the provision of access roads and paving, transport, solid waste management, street lighting and community buildings. For this reason, The Water, Engineering Development Centre, (WEDC) at Loughborough University in the UK is conducting research into anti-corruption initiatives in this area of infrastructure services delivery. This series of reports has been produced as part of a project entitled Accountability Arrangements to Combat Corruption, which was initially funded by the Department for International Development (DFID) of the British Government. The purpose of the work is to improve governance through the use of accountability arrangements to combat corruption in the delivery of infrastructure services. These findings, reviews, country case studies, case surveys and practical tools provide evidence of how anti-corruption initiatives in infrastructure delivery can contribute to the improvement of the lives of the urban poor. The main objective of the research is the analysis of corruption in infrastructure delivery. This includes a review of accountability initiatives in infrastructure delivery and the nature of the impact of greater accountability.
