Population Growth and Food Supply Springer

These reminiscences are an intimate account of Mila Rechcigl's saga, his fascinating life, his varied and successful professional career, and his highly visible public life, encompassing some fifty years, since the earliest childhood in a small hamlet in northeastern rural Bohemia to his government career in the World's Capital, Washington, DC and spending his retirement years in active scholarship and voluntary work for non-profit organizations. He views his life as a chess game, in which he confronts various challenges head-on, usually ending with a checkmate in his favor. He describes his idyllic youth at family mill, in an area known as Bohemian paradise, talks fondly of his parents and grandparents, the time he spent in a one-class rural school, followed by eight years in gymnasium in Mlada Boleslav, four during the Nazi occupation of Czechoslovakia and four in the post-War era under the communist threat. After successful escape from communist Czechoslovakia, he immigrates to America, spending his greenhorn years in New York City, working in a glass jewelry factory. He gets a scholarship, is accepted by a prestigious Ivy League school (Cornell) and with skimpy English manages getting his bachelor's degree in biochemistry in two and half years, followed by Masters and Ph.D. Gets hired by the National Institutes of Health in Bethesda where he conducts some pioneering research on enzyme turnover and later is offered training in science policy and administration, leading to his appointment as Special Assistant for Nutrition and Health, and later is put in charge of research at the US State Department's Agency for International Development. Beyond the call of duty, he

publishes numerous books and in his spare time, devotes energies to organizing an international Czechoslovak Society of Arts and Sciences into a first-class institution and does premier research on immigration history.

Hearings, Reports and Prints of the Senate Select Committee on Nutrition and Human Needs The World Food Problem Toward Ending Undernutrition in the Third World

This book explores the philosophical, and in particular ethical, issues concerning the conceptualization, design and implementation of poverty alleviation measures from the local to the global level. It connects these topics with the ongoing debates on social and global justice, and asks what an ethical or normative philosophical perspective can add to the economic, political, and other social science approaches that dominate the main debates on poverty alleviation. Divided into four sections, the volume examines four areas of concern: the relation between human rights and poverty alleviation, the connection between development and poverty alleviation, poverty within affluent countries, and obligations of individuals in regard to global poverty. An impressive collection of essays by an international group of scholars on one of the most fundamental issues of our age. The authors consider crucial aspects of poverty alleviation: the role of human rights; the connection between development aid and the alleviation of poverty; how to think about poverty within affluent countries (particularly in Europe); and individual versus collective obligations to act to reduce poverty. Judith Lichtenberg Department of Philosophy Georgetown University This collection of essays is most welcome addition to the burgeoning treatments of poverty and inequality. What is most novel about this volume is its sustained and informed attention to the explicitly ethical aspects of poverty and poverty alleviation. What are the ethical merits and demerits of income poverty,

multidimensional-capability poverty, and poverty as nonrecognition? How important is poverty alleviation in comparison to environmental protection and cultural preservation? Who or what should be agents responsible for reducing poverty? The editors concede that their volume is not the last word on these matters. But, these essays, eschewing value neutrality and a retreat into technical mastery, challenge us to find fresh and reasonable answers to these urgent questions.

The World Food Problem Rotary International

This second edition of *The World Food Problem* incorporates an up-to-date description of the state of world food supply and demand, as well as an assessment of prospects for the future. Recognizing that millions of people in the less-developed countries continue to go hungry, while there is more than enough food in the world to feed them, the authors tackle the question of why and what can be done about it. Integrating knowledge from many disciplines (agronomy, economics, nutrition, anthropology, demography, geography, health science, and public policy analysis), this highly readable and comprehensive text provides a combination of information and explanation designed specifically to be used in the undergraduate classroom.

Toward Understanding and Ending Undernutrition in the Developing World Oxford University Press

Includes subject section, name section, and 1968-1970, technical reports.

A Report of the President's Science Advisory Committee Lynne Rienner Pub

Why do millions of people in the less-developed countries go hungry - while there is an abundance of food in the world? What

can be done about it? These are the issues explored in this accessible and comprehensive text. In addition to incorporating updated data throughout, this new edition includes: a comprehensive description and analysis of the 2008 food crisis; an expanded discussion of the impact of using food crops to produce biofuels; new case studies and recent examples to illustrate key points; examples of successful and unsuccessful policy approaches; and reference to the latest research findings (with more than 150 new citations). The result is the best available analysis of the current world food problem, as well as a provocative assessment of prospects for the future

The World Food Conference Lynne Rienner Pub

Considers S. 1676, to coordinate and disseminate birth control information upon request in the U.S. and abroad, and to reorganize the State Dept and HEW.

Ethical Issues in Poverty Alleviation Lynne Rienner Pub

¿Why are there still approximately 1 billion people who do not have food security? This excellent book ... gives the facts, explains the causes and suggests mitigating policies.¿ ¿Richard Strange, Food Security ¿An important addition to the reading list for economic courses on the world food problem.¿ ¿Roland Herrmann, Australian Journal of Agricultural and Resource Economics ¿A fine book, which should be widely adopted as a text for world food courses.¿ ¿George J. Viksnins, Journal of Developing Areas The fifth edition of The World Food Problem reflects nearly a decade of new research on the causes and potential solutions to the problems of producing and distributing food in developing countries. With extensively updated data and new case studies throughout, this edition includes new or expanded discussions of such issues as: ¿ genetically modified food ¿ the impact of climate change ¿ the quality of agricultural land and water ¿ the significance of globalization ¿ implications of changes in demographic policy, such as the reversal of China¿s ¿one-child rule¿ The result is an accessible, comprehensive text, as well as a

provocative assessment of prospects for the future.

From Bohemian Paradise to American Haven Lynn Reinner Publishers

The introduction of the Affordable Care Act in the United States, the increasing use of prescription drugs, and the alleged abuse of racial profiling by police are just some of the factors contributing to twenty-first-century social problems. The Cambridge Handbook of Social Problems offers a wide-ranging roster of the social problems currently pressing for attention and amelioration. Unlike other works in this area, it also gives great consideration to theoretical and methodological discussions. This Handbook will benefit both undergraduate and graduate students eager to understand the sociology of social problems. It is suitable for classes in social problems, current events, and social theory. Featuring the most current research, the Handbook provides an especially useful resource for sociologists and graduate students conducting research.

The World Food Problem Toward Ending Undernutrition in the Third World Lynne Rienner Pub

Foreign Relations of the United States

Hundreds of millions of people still suffer from chronic hunger and food insecurity despite sufficient levels of global food production. The poor's inability to afford adequate diets remains the biggest constraint to solving hunger, but the dynamics of global food insecurity are complex and demand analysis that extends beyond the traditional domains of economics and agriculture. How do the policies used to promote food security in one country affect nutrition, food access, natural resources, and national security in other countries? How do the priorities and challenges of achieving food security change over time as countries develop economically? The Evolving Sphere of Food Security seeks to

answer these two important questions and others by exploring the interconnections of food security to security of many kinds: energy, water, health, climate, the environment, and national security. Through personal stories of research in the field and policy advising at local and global scales, a multidisciplinary group of scholars provide readers with a real-world sense of the opportunities and challenges involved in alleviating food insecurity. In sub-Saharan Africa, for example, management of HIV/AIDS, the establishment of an equitable system of land property rights, and investment in solar-powered irrigation play an important role in improving food security---particularly in the face of global climate change. Meanwhile, food price spikes associated with the United States' biofuels policy continue to have spillover effects on the world's rural poor with implications for stability and national security. The Evolving Sphere of Food Security traces four key areas of the food security field: 1) the political economy of food and agriculture; 2) challenges for the poorest billion; 3) agriculture's dependence on resources and the environment; and 4) food in a national and international security context. This book connects these areas in a way that tells an integrated story about human lives, resource use, and the policy process.
