The History of the Standard Oil Company Houghton Mifflin

Mastering the basic facts for addition, subtraction, multiplication, and division is an essential goal for all students. Most educators also agree that success at higher levels of math hinges on this fundamental skill. But what's the best way to get there? Are flash cards, drills, and timed tests the answer? If so, then why do students go into the upper elementary grades (and beyond) still counting on their fingers or experiencing math anxiety? What does research say about teaching basic math facts so they will stick? In *Math Fact Fluency*, experts Jennifer Bay-Williams and Gina Kling provide the answers to these questions—and so much more. This book offers everything a teacher needs to teach, assess, and communicate with parents about basic math fact instruction, including The five fundamentals of fact fluency, which provide a research-based framework for effective instruction in the basic facts. Strategies students can use to find facts that are not yet committed to memory. More than 40 easy-to-make, easy-to-use games that provide engaging fact practice. More than 20 assessment tools that provide useful data on fact fluency and mastery. Suggestions and strategies for collaborating with families to help their children master the basic math facts. *Math Fact Fluency* is an indispensable guide for any educator who needs to teach basic facts. This approach to facts instruction, grounded in years of research, will transform students' learning of basic facts and help them become more confident, adept, and successful at math.

MASTERING COMPETENCIES IN FAMILY THERAPY: A PRACTICAL APPROACH TO THEORY AND CLINICAL CASE DOCUMENTATION, 3rd Edition enables faculty to easily measure clinical

competencies as required by accrediting bodies for counseling, family therapy, psychology, and social work. Using an inviting and engaging tone, Diane R. Gehart introduces students to family therapy theories using real-world clinical forms, which are incorporated into the text. Diversity and research considerations are integrated into theoretical discussions and practical applications to facilitate a more holistic understanding of couple and family therapy. Updated throughout, this edition includes new and revised treatment forms; a new model based on the work of Karl Tomm that facilitates cross-theoretical comparison; coverage of two new theories (integrative behavioral couple's theory, a leading evidence-based treatment; and intensive structural therapy); and more. Assessing math concepts is a continuum of assessments that focuses on important core concepts and related "critical learning phases" that must be in place if children are to understand and be successful in mathematics. This assessment series is based on the premise that teachers will be able to provide more effective instruction and ensure maximum learning for each of their students when they are aware of the essential steps that children move through when developing an understanding of foundational mathematical ideas. The data that is gathered and organized using the assessment tools presented here provides teachers with the information that is needed to determine precisely what children need to learn. Students progress confidently when teachers are able to provide appropriately challenging learning experiences for individuals and classroom groups. - Back cover
