Winter Meeting

The Routledge Handbook of Urban Logistics offers a state-of-the-art, comprehensive overview of the discipline of urban and city logistics. The COVID-19 pandemic and the rise in internet shopping in particular have placed new demands on urban logistics which require innovative technological and policy responses. Similarly, the necessity for sustainable urban logistics offers both a challenge and opportunity for development and seeks to address traffic congestion, local air quality, traffic-related degradation, the use of energy, safety aspects and noise. Featuring contributions from world-leading, international scholars, the chapters examine concepts, issues and ideas across

five topic areas that reflect the increasingly diverse nature of current research and thinking in urban logistics: transport modes, urban logistics sectors, technical analysis, policy, and sustainability. Each chapter provides an overview of current knowledge, identifies issues and discusses the relevant debates in urban logistics and the future research agenda. This handbook offers a single repository on the current state of knowledge, written from a practical perspective, utilising theory that is applied and developed using real-work examples. It is an essential reference for researchers, academics and students working in all areas of urban logistics, from policy and planning to technology and sustainability, in addition to industry practitioners looking to develop their professional knowledge.

This book presents a new and innovative approach to Lie groups and differential geometry. Rather than compiling and reviewing the existing material on this classical subject, Professor Ortaçgil instead questions the foundations of the subject, and proposes a new direction. Aimed at the curious and courageous mathematician, this book aims to provoke further debate and inspire further development of this original research.
