This Proceedings is a collection of papers
presented at the Third Annual
Conference on Superconductivity and
Applications organized by the New York
State Institute on Superconductivity. This
year the Conference was held at the
Buffalo Hilton Hotel on September 19-
21, 1989, with previous meetings on
September 28-29, 1987, and April 18-20,
1988. As in previous years, this meeting
was highly successful, with an
attendance of over three hundred
researchers participating in lively
scientific exchanges and discussions.
The high quality of the talks is evident in
this Proceedings. The field of high
temperature superconductivity has
matured considerably since its early

days of media frenzy and rapid new discoveries. However, the enthusiasm and pace of research have not slowed down. A much better picture of the nature of high temperature superconductivity, the properties of these new materials and where they may find their eventual use has emerged. Processing techniques, especially thin film deposition, have been perfected nearly to the point of allowing commercial applications. We expect continued phenomenal growth of the field of high temperature superconductivity, both in terms of research and applications for many years to come.

Modeling and machining are two terms

closely related. The benefits of the

application of modeling on machining

are well known. The advances in technology call for the use of more sophisticated machining methods for the production of high-end components. In turn, more complex, more suitable, and reliable modeling methods are required. This book pertains to machining and modeling, but focuses on the special aspects of both. Many researchers in academia and industry, who are looking for ways to refine their work, make it more detailed, increase their accuracy and reliability, or implement new features, will gain access to knowledge in this book that is very scarce to find elsewhere.

The natural interaction ability between human and machine mainly involves

human-machine dialogue ability, multi-modal sentiment analysis ability, human-machine cooperation ability, and so on. To enable intelligent computers to have multi-modal sentiment analysis ability, it is necessary to equip them with a strong multi-modal sentiment analysis ability during the process of human-computer interaction. This is one of the key technologies for efficient and intelligent human-computer interaction. This book focuses on the research and practical applications of multi-modal sentiment analysis for human-computer natural interaction, particularly in the areas of multi-modal information feature representation, feature fusion, and sentiment classification. Multi-modal sentiment analysis for natural interaction is a comprehensive research field that involves the integration of natural language processing, computer vision, machine learning, pattern recognition, algorithm, robot intelligent system, human-computer interaction, etc. Currently, research on multi-modal sentiment analysis in natural interaction is developing rapidly. This book can be used as a professional textbook in the fields of natural interaction, intelligent question answering (customer service), natural language processing, human-computer interaction, etc. It can also serve as an important reference book for the development of systems and products in intelligent robots, natural language processing, human-computer interaction, and related fields.

Great leaders of the past century dominated Indian political scene for a decade or two. But Savarkar's name shines brightly from 1900 to 1966.

Gandhiji said, 'No independence without Hindu-Muslim unity.'

But Pakistan was created. When the late Prime Minister

Nehru chided the Hindu nationalists for advocating Hindu Raj, Savarkar said,

'The choice, therefore, is not between

two sets of personalities but between

two ideologies, not Indian Raj or Hindu

Raj but Muslim Raj or Hindu Raj, Akhand

He knew Savarkar personally and wrote his
