This comprehensive volume provides teachers, researchers and education professionals with cutting edge knowledge developed in the last decades by the educational, behavioural and neurosciences, integrating cognitive, developmental and socioeconomic approaches to deal with the problems

children face in learning mathematics. The neurocognitive mechanisms and the cognitive processes underlying acquisition of arithmetic abilities and their significance for education have been the subject of intense research in the last few decades, but the most part of this research has been conducted in non-applied settings and there's still a deep discrepancy between the level of scientific knowledge and its implementation into actual educational settings. Now it's time to bring the results from the laboratory to the classroom. Apart from bringing the theoretical discussions to educational settings, the volume presents a wide range of methods for early detection of children with risks in mathematics learning and strategies to develop effective interventions based on innovative cognitive test instruments. It also provides insights to translate research knowledge into public policies in order to address socioeconomic issues. And it does so from an international perspective, dedicating a whole section to the cultural diversity of mathematics learning difficulties in different parts of the world. All of this makes the International Handbook of Mathematical Learning Difficulties an essential tool for those involved in the daily struggle to prepare the future generations to succeed in the global knowledge society.

This excellent addition to the UTiCS series of undergraduate textbooks provides a detailed and up to date description of the main principles behind the design and implementation of modern programming languages. Rather than focusing on a specific language, the book identifies the most important principles shared by large classes of languages. To complete this general approach, detailed descriptions of the main programming paradigms, namely imperative, object-oriented, functional and logic are given, analysed in depth and compared. This provides the basis for a critical understanding of most of the programming languages. An historical viewpoint is also included, discussing the evolution of programming languages, and to provide a context for most of the constructs in use today. The book concludes with two chapters which introduce basic notions of syntax, semantics and computability, to provide a completely rounded picture of what constitutes a programming language. /div

Since the very beginnings of the digital humanities, Papyrology has been in the vanguard of the application of information technologies to its own scientific purposes, for both theoretical and practical reasons (the strong awareness towards the problems of human memory and the material ways of preserving it; the need to work with a multifarious and overwhelming amount of different

data). After more than thirty years of development, we have now at our disposal the most advanced tools to make papyrological studies more and more effective, and even to create a new conception of "papyrology" and a new model of "edition" of the ancient documents. At this turning point, it is important to build an epistemological framework including all the different expressions of Digital Papyrology, to trace a historical sketch setting the background of the contemporary tools, and to provide a clear overview of the current theoretical and technological trends, so that all the possibilities currently available can be exploited following uniform pathways. The volume represents an innovative attempt to deal with such topics, usually relegated into very quick and general treatments within journal articles or papyrological handbooks.

Qualsiasi impresa, di ogni tipo e dimensione, dalla piccola azienda familiare fino alle enormi multinazionali, utilizza Excel e i fogli di calcolo. Spesso però ci si limita alle funzionalità più semplici, precludendosi la possibilità di ottenere risultati di maggiore interesse. Questo manuale colma il vuoto e descrive come sviluppare applicazioni in grado di acquisire dati eterogenei ed elaborarli in sicurezza. Dando per conosciuto l'utilizzo di base di un foglio di calcolo, il testo accompagna il lettore nell'impiego combinato di tabelle pivot, macro, il linguaggio VBA, gli eventi e i controlli che permettono di interagire con i dati. L'obiettivo finale è la realizzazione di applicazioni complesse in grado di soddisfare esigenze gestionali ma anche di condividere report con altri software della suite Office e lavorare connessi in Rete.

From the people who turned teacher education on its ear in Australia in 2001 comes a text about preparing the next generation of teachers. Richard Smith and David Lynch, two of Australia's leading teacher education researchers and the architects of the acclaimed Bachelor of Learning Management program (BLM), take their previously published ideas about teaching and teacher education further to detail a new paradigm in the preparation of teachers. Drawing on 30 years of teacher education research and their own experiences in redeveloping teacher education in Australia, Smith and Lynch explore what it means to be a teacher in the 2000s, outlining a new vision for the preparation of teachers in a Knowledge Age.

Excel è il software di produttività più diffuso e più utilizzato in tutti gli ambienti professionali, ed è un compagno insostituibile nel lavoro quotidiano come nell'analisi di grandi quantità di dati complessi. Ciò nonostante la maggior parte degli utenti ne conosce e utilizza solo un numero molto limitato di funzionalità, spesso in maniera elementare. Questo eserciziaro mostra in pratica l'uso di una grande varietà di formule, funzioni e strumenti (come le tabelle pivot, le macro o il componente aggiuntivo Risolutore) che permettono di lavorare in maniera efficace e professionale con Excel. L'eserciziaro parte dalle basi e arriva in maniera progressiva a trattare casi molto complessi. È un valido supporto per studenti universitari, professionisti e manager che vogliono imparare dalle basi o migliorare nella conoscenza di Excel fino a un livello avanzato. Nello spazio web dedicato sono disponibili tutti i file iniziali e risolti per svolgere gli esercizi e verificare le soluzioni. Oltre 40 esercizi sono commentati, in modo da chiarire i concetti fondamentali e i punti più complessi. Gli autori sono tutti docenti nel corso di Informatica per l'economia presso l'Università Bocconi di Milano: Massimo Ballerini, Alberto Clerici, Chiara Debernardi, Davide Del Corno, Maurizio De Pra, Gianluca Salviotti e Marco Sampietro.
