As the body of First World War literature continues to grow, women's experiences of this period remain largely obscure, particularly those of Canadian and Newfoundland women. A Sisterhood of Suffering and Service explores this obscurity and begins to redress it. This innovative collection discusses women's activities in the workforce, overseas, within the domestic realm, and in literary representations to show that women were not bystanders who were quietly knitting for the duration; rather, they actively participated in wartime society, served their country in a variety of ways, made sacrifices, and were deeply affected by the vagaries of war. Incorporating the experiences of Newfoundland with those of Canada, and looking at girls as well as women, the volume enriches our knowledge of an important era in Canadian nation building and takes a step towards writing women into the historical narratives of the First World War.

Drugs of Abuse (1996) Disha Publications

CMH Publication 70-30. Edited by Frank N. Schubert and Theresa L. Kraus. Discusses the United States Army's role in the Persian Gulf War from August 1990 to February 1991. Shows the various strands that came together to produce the army of the 1990s and how that army in turn performed under fire and in the glare of world attention. Retains a sense of immediacy in its approach. Contains maps which were carefully researched and compiled as original documents in their own right. Includes an index.

The 3rd Workshop on Formal Approaches to Agent-Based Systems (FAABS-III) was held at the Greenbelt Marriott Hotel (near NASA Goddard Space Flight Center) in April 2004 in conjunction with the IEEE Computer Society. The first FAABS workshop was held in April 2000 and the second in October 2002. Interest in agent-based systems continues to grow and this is seen in the wide range of conferences and journals that are addressing the research in this area as well as the prototype and developmental systems that are coming into use. Our third workshop, FAABS-III, was held in

April, 2004. This volume contains the revised papers and posters presented at that workshop. The Organizing Committee was fortunate in having significant support in the planning and organization of these events, and were privileged to have well-renowned keynote speakers Prof. J Moore (FAABS-I), Prof. Sir Roger Penrose (FAABS-II), and Prof. John McCarthy (FAABS-III), who spoke on the topic of self-aware computing systems, auguring perhaps a greater interest in autonomic computing as part of future FAABS events. We are grateful to all who attended the workshop, presented papers or posters, and participated in panel sessions and both formal and informal discussions to make the workshop a great success. Our thanks go to the NASA Goddard Space Flight Center, Codes 588 and 581 (Software Engineering Laboratory) for their financial support and to the IEEE Computer Society (Technical Committee on Complexity in Computing) for their sponsorship and organizational assistance.

Since its original publication Hunter's manual has been "not only a rich and ready reference tool but also a practical resource for solving problems" (Catholic Library World), and no text has served as a better overview of the field of archives. Newly revised and updated to more thoroughly address our increasingly digital world, including integration of digital records and audiovisual records into each chapter, it remains the clearest and most comprehensive guide to the discipline. Former editor of *American Archivist*, the journal of the Society of American Archivists (SAA), Hunter covers such keystone topics as a history of archives, including the roles of historical societies and local history collections in libraries; new sections on community archives, diversity, and inclusion; conducting a survey and starting an archival program; selection, appraisal, acquisition, accessioning, and deaccessioning; important points of copyright, privacy, and ethics; arrangement of archival collections, with a discussion of new theories; description, including DACS, EAD, and tools such as ArchivesSpace; access, reference, and outreach, with a look at how recent innovations in finding

aids can help researchers; preservation, including guidance on how to handle rare books, maps, architectural records, and artifacts; digital records, addressing new and popular methods of storage and preservation of email, social media, image files, webpages, Word documents, spreadsheets, databases, and media files; disaster planning, security, and theft prevention; metrics, assessment, establishing employee procedures and policies, working with interns and volunteers, and other managerial duties; public relations and marketing, from social media and the Web to advocacy; and professional guidelines and codes, such as the newly developed SAA Statement of Core Values of Archivists. Providing in-depth coverage of both theory and practice, this manual is essential for archivists at all levels of experience and of all backgrounds.

29 Summer School and International Symposium on the Physics of Ionized Gases Micromedia

The concept of tax compliance is as old as the tax itself, but staying compliant with tax regulations has become increasingly demanding. A changing tax regulatory environment, resulting from regulatory actions of the OECD, the European Union and national governments, poses many problems for tax compliance awareness. This book explores various approaches to improving tax compliance. Starting with the procedures and processes that are at the centre of the debate, it includes the level of tax position security obtained as a result of cooperation between tax administration and an organisation, ending with tax compliance requirements imposed by one-sided action of tax administration. Offering an experience and evidence-based analysis of how tax compliance influences an organisation's tax and financial position, the issues are examined from both a theoretical and a practical perspective, using empirical research and case studies with an international dimension for illustration. Emphasising a holistic approach to tax compliance and its role in tax risk management within an organisation, this study offers a framework for making the challenging task of tax compliance and risk management more effective and more efficient. Exploring tax compliance focusing on the tax world after the BEPS project and anti-tax evasion and anti-tax avoidance regulatory actions undertaken by the European Union and OECD, the book has a practical focus on tax system design within the organisation and will be of interest to students, researchers and practitioners working in the areas of tax law and tax compliance.

7 Ways Flatiron Books

Thirty years ago, China seemed hopelessly mired in poverty, Mexico triggered the Third World Debt Crisis, and Brazil suffered under hyperinflation. Since then, these and other developing countries have turned themselves around, while First World nations, battered by crises, depend more than ever on sustained growth in emerging markets. In *Turnaround*, economist Peter Blair Henry argues that the secret to emerging countries' success (and ours) is discipline—sustained commitment to a pragmatic growth strategy. With the global economy teetering on the brink, the stakes are higher than ever. And because stakes are so high for all nations, we need less polarization and more focus on facts to answer the fundamental question: which policy reforms, implemented under what

circumstances, actually increase economic efficiency? Pushing past the tired debates, Henry shows that the stock market's forecasts of policy impact provide an important complement to traditional measures. Through examples ranging from the drastic income disparity between Barbados and his native Jamaica to the "catch up" economics of China and the taming of inflation in Latin America, Henry shows that in much of the emerging world the policy pendulum now swings toward prudence and self-control. With similar discipline and a dash of humility, he concludes, the First World may yet recover and create long-term prosperity for all its citizens. Bold, rational, and forward-looking, *Turnaround* offers vital lessons for developed and developing nations in search of stability and growth.

Kiplinger's Personal Finance Routledge

In its Fifth Edition, this classic book retains its traditional strength of relating molecular physiology to understanding disease pathology and treatment as it explores the current state and future direction of hepatology. Painstakingly revised, this edition includes 60 new chapters. As in previous editions, a section called Horizons summarizes advances of extraordinary nature in areas expected to have a substantial impact on hepatology. The Fifth Edition's Horizons section includes emerging topics such as tissue engineering of the liver, liver-directed gene therapy, decoding the liver cancer genome, and imaging cellular proteins and structure. To preserve essential background information which has not changed while making room for the panoply of major new contributions to understanding of liver disease, 14 chapters from the previous edition are freely available online at [gastrohep.com](http://www.gastrohep.com). To view these chapters visit - <http://www.gastrohep.com/theliver/>

Journal of Proceedings ... American Library Association

A new framework contextualizes crucial international security issues at sea in the Indo-Pacific. Competition at sea is once again a central issue of international security. Nowhere is the urgency to address state-on-state competition at sea more strongly felt than in the Indo-Pacific region, where freedom of navigation is challenged by regional states' continuous investments in naval power, and the renewed political will to use it to undermine its principles. The *New Age of Naval Power in the Indo-Pacific* provides an original framework in which five "factors of influence" explain how and why naval power matters in this pivotal part of the world. An international group of contributors make the case that these five factors draw upon a longstanding influence of naval power on regional dynamics and impact the extent to which different states in the region use naval power: the capacity to exert control over sea-lanes, the capacity to deploy a nuclear deterrent at sea, the capacity to implement the law of the sea in an advantageous way, the ability to control marine resources, and the capacity for technological innovation. The *New Age of Naval Power in the Indo-Pacific* offers a fresh approach for academics and policy makers seeking to navigate the complexity of maritime security and regional affairs.

In *Awkward Dominion*, Frank Costigliola offers a striking interpretation of the emergence of the United States as a world power in the 1920s, a period in which the country faced both burdens and opportunities as a result of the First World War. Exploring the key international issues in the interwar period—peace treaty revisions, Western economic recovery, and modernization—Costigliola considers American political and economic success in light of Europe's fascination with American

technology, trade, and culture. The figures through which he tells this story include Herbert Hoover, Calvin Coolidge, Henry Stimson, Charles Lindberg, Ernest Hemingway, and Henry Ford.

7 Ways to reinvent your favorite ingredients with more than 120 new, exciting and tasty recipes Naked Chef television personality Jamie Oliver has looked at the top ingredients we buy week in, week out. We're talking about those meal staples we pick up without thinking - chicken breasts, salmon fillets, ground beef, eggs, potatoes, broccoli, mushrooms, to name but a few. We're all busy, but that shouldn't stop us from having a tasty, nutritious meal after a long day at work or looking after the kids. So, rather than trying to change what we buy, Jamie wants to give everyone new inspiration for their favorite supermarket ingredients. Jamie will share 7 achievable, exciting and tasty ways to cook 18 of our favorite ingredients, and each recipe will include no more than 8 ingredients. Across the book, at least 70% of the recipes will be everyday options from both an ease and nutritional point of view, meaning you're covered for every day of the week. With everything from fakeaways and traybakes to family and freezer favorites, you'll find bags of inspiration to help you mix things up in the kitchen. Step up, 7 Ways, the most reader-focused cookbook Jamie has ever written.

Turnaround Edward Elgar Publishing

This book explores the complex issues surrounding the management of cleft lip and palate in the Developing World, and aims to raise the profile of a condition commonly considered to be of only cosmetic importance in countries where infant and child mortality rates are high. It provides information and guidelines to three groups: those in the Developing World setting up programmes of cleft lip and palate care, and clinicians from developed countries delivering care in that context, as well as clinicians in the Developing World itself. The book is multidisciplinary, demonstrating the role of every member of the team, not just the surgeon, and includes contributions from charity organisations which support these cleft lip and palate programmes. Each area of clinical practice is covered, comparing typical care in developed countries with that in the Developing World, and contains practical suggestions as to how the gap may be narrowed. Management of Cleft Lip and Palate in the Developing World is an important resource for anyone having - or planning to have - a commitment to develop services in that environment and to clinicians in the Developing World faced with large numbers of cleft lip and palate patients and limited resources of materials and manpower.

The Examiner Springer

Using a range of calculative devices, (Mis)managing Macroprudential Expectations explores the methods used by central banks to predict and govern the tail risks that could impact financial stability. Through an in-depth case study, the book utilises empirically-informed theoretical analysis to capture these low-probability and high-impact events, and offers a novel conceptualisation of the role of risk modelling within the macroprudential policy agenda.

Covers: the Controlled Substances Act (regulation, penalties); narcotics (natural origin, semi-synthetic, synthetic -- opium, morphine, codeine, thebaine, heroin, hydrocodone, meperidine, pentazocine); depressants (chloral hydrate, barbiturates, glutethimide); stimulants (cocaine, amphetamines, methcathinone, khat); hallucinogens (peyote and mescaline, psilocybin, LSD, PCP); cannabis (marijuana, hash, hashish oil); steroids; and related topics (clandestine laboratories, drug abuse and AIDS, and more). Full-color illustrations of hundreds of illegal drugs.

Guide to UPSC CAPF Assistant Commandant Paper I & II Institut za nuklearne nauke VINČA

First Published in 2004. The majority of our large manufacturing cities are in decline—thousands of acres of their former industrial greatness have become gigantic scrapheaps. New industries with new technologies no longer make it necessary to locate industry in cities, and social and fiscal pressures are drawing people out into the countryside. Thus a conflict is growing with cities dying for lack of industry and new housing— whilst conservationists resist the spread of development into the green belts or further into the rural landscape. This book is an important contribution to a contemporary debate which is of significance to everyone living in Britain: the need for a land-use policy which looks simultaneously at the towns and country and strikes a balance between urban and rural renewal

The Great Society Subway Disha Publications

As Metro stretches to Tysons Corner and beyond, this paperback edition features a new preface from the author. Drivers in the nation's capital face a host of hazards: high-speed traffic circles, presidential motorcades, jaywalking tourists, and bewildering signs that send unsuspecting motorists from the Lincoln Memorial into suburban Virginia in less than two minutes. And parking? Don't bet on it unless you're in the fast lane of the Capital Beltway during rush hour. Little wonder, then, that so many residents and visitors rely on the Washington Metro, the 106-mile rapid transit system that serves the District of Columbia and its inner suburbs. In the first comprehensive history of the Metro, Zachary M. Schrag tells the story of the Great Society Subway from its earliest rumblings to the present day, from Arlington to College Park, Eisenhower to Marion Barry. Unlike the pre-World War II rail systems of New York, Chicago, and Philadelphia, the Metro was built at a time when most American families already owned cars, and when most American cities had dedicated themselves to freeways, not subways. Why did the nation's capital take a different path? What were the consequences of that decision? Using extensive archival research as well as oral history, Schrag argues that the Metro can be understood only in the political context from which it was born: the Great Society liberalism of the Kennedy, Johnson, and Nixon administrations. The Metro emerged from a period when Americans believed in public investments suited to the grandeur and dignity of

the world's richest nation. The Metro was built not merely to move commuters, but in the words of Lyndon Johnson, to create "a place where the city of man serves not only the needs of the body and the demands of commerce but the desire for beauty and the hunger for community." Schrag scrutinizes the project from its earliest days, including general planning, routes, station architecture,

funding decisions, land-use impacts, and the behavior of Metro riders. The story of the Great Society Subway sheds light on the development of metropolitan Washington, postwar urban policy, and the promises and limits of rail transit in American cities.
