Sunggyu Lee, PhD - CHEMICAL ENGINEER Since its commercial implementation in 1923, methanol synthesis has undergone numerous improvements. These are mainly driven by reduction of investment costs which dominate in the production cost of methanol. Indeed, the conversion of remote gas to methanol offers a clear economic advantage on raw material costs compared to oil refining. Methanol synthesis: a short review of technology improvements WWW.METHANOL.ORG • 500 MTPD of CO2 is recovered from the flue gas using MHI's proprietary KS-1™ solvent and injected in synthesis loop for boosting Methanol production. • The capacity of Methanol Plant has increased by 300 MTPD with addition of CO2 in synthesis gas mixture as excess H2 is available for the methanol reaction.
