The challenges and opportunities of running a small business in rural America Seven Stories Press

The United States-one of the world's wealthiest and resource-richest nations-has multiple food-related problems: declining food quality due to industrialization of its production, obesity across all age groups, and a surprisingly large number of households suffering from food insecurity. These issues threaten to shorten the lives of many and significantly reduce the quality of life for millions of others. This book explores the root causes of food-related problems in the 20th and 21st centuries and explains why collective impact-the social form of working together for a common goal-needs to be employed to reach a successful resolution to hunger, obesity, and the challenges of the industrial food system.

Authored by Mark Winne, a 45-year food activist, the book begins with background information about the evolution of the U.S. food movement since the 1960s that documents its incredible growth and variety of interests, organizations, and sectors. The subsequent sections demonstrate how these divergent interests have created a lack of unity and deterred real change and improvement. Through examples from specific cities and states as well as a discussion of group dynamics and coalition-building methods, readers come away with an understanding of a complicated topic and grasp the potential of a number of strategies for creating more cohesion within the food movement-and realizing meaningful improvements in our food system for current and future generations.

The New Urban Crisis OECD Publishing
This book discusses human factors research directed towards realizing and assessing sustainability in the built environment and architecture. It reports on advanced engineering methods for

sustainable infrastructure design, architecture as well as on assessments of the efficient methods and the social, environmental, and economic impact of various designs and projects. The book covers a range of topics, including the use of recycled materials in architecture, ergonomics in buildings and public design, sustainable design for smart cities, design for the aging population, industrial design, human scale in architecture, and many more. Based on the AHFE 2019 International Conference on Human Factors in Architecture, Sustainable Urban Planning and Infrastructure, held on July 24-28, 2019, in Washington D.C., USA, it offers various perspectives on sustainability and ergonomics. As such, it is a valuable reference resource for designers, urban engineers, architects, infrastructure professionals, public infrastructure owners, policy makers, government engineers and planners, as well as operations managers and academics active in urban and infrastructure research.

OECD Economic Surveys: United States 2018 Oxford University Press

This report is the last of a series in which RAND explores the elements of a national strategy for the conduct of U.S. foreign policy, in this new era of turbulence and uncertainty. Three alternative strategic concepts are presented.

Working to Restore Frontiers Media SA

In recent years crackdowns on immigrant labor and a shrinking job market in California, Arizona, and Texas have pushed Latine immigrants to new destinations, particularly places in the American South. Although many of these immigrants work in manufacturing or food-processing plants, a growing number belong to the professional

middle class. These professionals find that despite their privileged social class and regardless of their national origin, many non-Latines assume that they are undocumented working-class Mexicans, the stereotype of the “typical Latine.” In *Precarious Privilege*, sociologist Irene Browne focuses on how first-generation middle-class Mexican and Dominican immigrants in Atlanta respond to this stigmatizing assumption. Browne finds that when asked to identify themselves by race, these immigrants either reject racial identities entirely or draw on belief systems from Mexico and the Dominican Republic that emphasize European-indigenous mixed race identities. When branded as typical Latines in the U.S., Mexican middle-class immigrants emphasize their social class or explain that a typical Latine can be middle-class, while Dominicans simply indicate that they are not Mexican. Rather than blame systemic racism, both Mexican and Dominican middle-class immigrants often attribute misperceptions of their identity to non-Latines’ ignorance or to individual Latines’ lack of effort in trying to assimilate. But these middle-class Latine immigrants do not simply seek to position themselves on par with the U.S.-born white middle class. Instead, they leverage their cosmopolitanism—for example, their multilingualism or their children’s experiences traveling abroad—to engage in what Browne calls “one-up assimilation,” a strategy that aims to position them above the white middle class, who are often monolingual and unaware of the world outside the United States. Middle-class Latines’ cosmopolitanism and valuing of diversity also lead them to have cordial relations with African Americans, but these immigrants do not see themselves as sharing African Americans’ status as

oppressed minorities. Although the stereotype of the typical Latine has made middle-class Latine immigrants susceptible to stigma, they insist that this stigma does not play a significant role in their lives. In many cases, they view the stereotype as a minor issue, feel that opportunities for upward mobility outweigh any negative experiences, or downplay racism by emphasizing their class privilege. Browne observes that while downplaying racism may help middle-class Latine immigrants maintain their dignity, it also perpetuates inequality by reinforcing the lower status of working-class undocumented immigrants. It is thus imperative, Browne argues, to repeal harsh anti-immigration policies, a move that will not only ease the lives of the undocumented but also send a message about who belongs in the country. Offering a nuanced exploration of how race, social class, and immigration status intersect, *Precarious Privilege* provides a complex portrait of middle-class Latine immigrants in the United States today.

Murder in the Bayou Springer Nature In a Box draws on the experiences of more than one hundred Michigan women on probation or parole to analyze how court, state, and federal policies hamper the state's efforts at gender-responsive reforms in community supervision. Closely narrating the stories of six of these women, Merry Morash shows how countervailing influences keep reform-oriented probation and parole agents and the women they supervise "in a box." Supervisory approaches that attempt to move away from punitive frameworks are limited or blocked by neoliberal social policies. Inspired by the interviewees' reflections on their own experiences, the book offers

recommendations for truly effective reforms within and outside the justice system.

Economic Transition of Distressed Communities CRC Press

This book provides an integrated description of the indicators of rangeland sustainability that capture ecological, economic, and social dimensions. It takes a fresh look at the information available on current and emerging issues across rangelands, and presents collaborative research for future progress. Authors offer a framework for evaluating rangeland sustainability, the best available data to use, as well as an interactive tool for use at a variety of geographical scales. Readers with limited knowledge of rangelands, as well as professional rangeland ecologists and land managers, will gain an understanding of the best tools available today to assess sustainability across rangeland ecosystems in the U.S.

Rangeland Sustainability Island Press Seventeen in a series of annual reports comparing business regulation in 190 economies, *Doing Business 2020* measures aspects of regulation affecting 10 areas of everyday business activity. *Handbook of Research on Transforming Government, Nonprofits, and Healthcare in a Post-Pandemic Era* Penguin Random House India Private Limited

The power sector and transportation tend to dominate conversations about climate change, but there's an under-the-radar source of climate pollution that must be addressed: industry. Globally, industrial activity is responsible for one-third of human-caused greenhouse gas emissions. Though industry is a major emitter, it is essential for producing the tools we need to fight climate change—like wind turbines, solar panels, and electric vehicles—and for meeting

our everyday needs. How can industry eliminate its climate pollution while supplying transformational technologies? This book delivers a first-of-its-kind roadmap for the zero-carbon industrial transition, spotlighting the breakthrough innovations transforming the manufacturing sector and the policies that can accelerate this global shift. Jeffrey Rissman illustrates the scope of the challenge, diving into the workings of heavy polluters like steel, chemicals, plastics, cement, and concrete. He examines ways to affordably decarbonize manufacturing, such as electrifying industrial processes, using hydrogen, deploying carbon capture and storage, and growing material efficiency with lightweighting and 3D printing. But technologies are only part of the picture. Enacting the right policies—including financial incentives, research and development support, well-designed carbon pricing, efficiency and emissions standards, and green public procurement—can spur investment and hasten emissions reductions. Rissman provides a framework to ensure that the transition to clean industry enhances equity, health, and prosperity for communities worldwide. Engaging and comprehensive, *Zero-Carbon Industry* is the definitive guide to decarbonizing the vast—yet often overlooked—global industrial sector.

Precarious Privilege Kluwer Law International B.V.

Raymond is a talented young artist who carries his work from homeless shelter to homeless shelter in a tattered bag but has never even been inside a museum. He is emblematic of the children that the renowned pediatrician and children's advocate Irwin Redlener has met over the course of his long and colorful career. Inadequate education, barriers to

health care, and crushing poverty make it overwhelmingly difficult for many children to realize their dreams. In this memoir, Redlener draws on poignant personal experiences to investigate the nation's healthcare safety net and special programs that are designed to protect and nurture our most vulnerable kids, but that too often fail to do so. The book follows Redlener's winding career, from his work as a pediatrician in the Arkansas delta, to treating child abuse in a Miami hospital, to helping children in the aftermath of 9/11 and Hurricane Katrina. The reader accompanies him to the board of USA for Africa, to cofounding the Children's Health Fund with Paul Simon, as he persuades Joan Baez to play a benefit concert for his clinic in rural Arkansas, and to dinner with Fidel Castro. But what has motivated him most powerfully are the children who struggle with terrible adversities yet dream of becoming paleontologists, artists, and marine biologists. These stories are his springboard for discussing larger policy issues that hinder us from effectively eradicating childhood poverty and overcoming barriers to accessible health care. Persistent deprivation and the avoidable problems that accompany poverty ensnare millions of children, with rippling effects that harm the health, prosperity, and creativity of the adults they become. Redlener argues that we must drastically change our approach to meeting the needs of children—for their sake and to ensure America's resiliency and influence in an increasingly complex and challenging world.

Workforce Education International Monetary Fund
Ethics and Values in Industrial-Organizational Psychology was one of

the first books to integrate work from moral philosophy, moral psychology, I-O psychology, and political and social economy, as well as business. It incorporates these perspectives into a "framework for taking moral action" and presents a practical model for ethical decision making. The second edition has added a chapter on Virtue Theory, including its application in I-O, Organizational behavior (OB) and business; expands Moral Psychology to two chapters, with more attention to moral emotions, effects of the "dark side" of personality, and the intuitionist model of moral judgment; expands the sections on social and economic justice; and expands the treatment of the Responsible Conduct of Research with a new chapter on Research Integrity. Examples from I-O research and practice, as well as current business events, are offered throughout. It is ideal for ethics and I-O courses at the graduate level.

Ethics in Everyday Places Rand Corporation

This volume collects four studies that were prepared as background research to the 2018 OECD Economic Survey of the United States. Using micro-data survey responses, regional and sectorial data, these studies seek to provide insights into employment responds to labour market disruption ...

The Intersection of Trauma and Disaster Behavioral Health Russell Sage Foundation

An exploration of moral stress, distress, and injuries inherent in modern society through the maps that pervade academic and public communications worlds. In *Ethics in Everyday Places*, ethicist and geographer Tom Koch considers what happens when, as he puts it, "you do everything right but

know you've done something wrong." The resulting moral stress and injury, he argues, are pervasive in modern Western society. Koch makes his argument "from the ground up," from the perspective of average persons, and through a revealing series of maps in which issues of ethics and morality are embedded. The book begins with a general grounding in both moral stress and mapping as a means of investigation. The author then examines the ethical dilemmas of mapmakers and others in the popular media and the sciences, including graphic artists, journalists, researchers, and social scientists. Koch expands from the particular to the general, from mapmaker and journalist to the readers of maps and news. He explores the moral stress and injury in educational funding, poverty, and income inequality ("Why aren't we angry that one in eight fellow citizens lives in federally certified poverty?"), transportation modeling (seen in the iconic map of the London transit system and the hidden realities of exclusion), and U.S. graft organ transplantation. This uniquely interdisciplinary work rewrites our understanding of the nature of moral stress, distress and injury, and ethics in modern life. Written accessibly and engagingly, it transforms how we think of ethics—personal and professional—amid the often conflicting moral injunctions across modern society. Copublished with Esri Press

The Politics of Protest Bloomsbury Publishing USA

The newest book by Joel Berg--an internationally recognized leader and media spokesman in the fields of hunger, poverty, food systems, and U.S. politics, and the director of Hunger Free America--*America We Need to Talk: A*

Self-Help Book for the Nation is both a parody of relationship and self-help books and a serious analysis of the nation's political and economic dysfunction. Explaining that the most serious--and most broken--relationship is the one between us, as Americans, and our nation, the book explains how, no matter who becomes our next president, average Joes can channel their anger at our hobbled system into concrete actions that will fix our democracy, rebuild our middle class, and restore our stature in the world as a beacon of freedom and hope. Starting with the belief that it's irresponsible for Americans to blame the nation's problems solely on "the politicians" or "the system," Joel makes a case for how it's the personal responsibility of every resident of this country to fix it. The American people are in a relationship with their government and their society, and, as in all relationships, it's the responsibility of both sides to recognize and repair their problems.

OECD Economic Survey of the United States: Key Research Findings MIT Press
Between 2005 and 2009, the bodies of eight women were discovered around the town of Jennings, in Jefferson Davis Parish, Louisiana. They had all engaged in sex work as a means of survival, and they came to be called the Jeff Davis 8. The investigations into their deaths, originally searching for a serial killer, raised questions about police misconduct and corruption.

Stand Together or Starve Alone World Bank Publications

This book focuses on the constant tension between democracy and conspiratorial behavior in the new global order. It addresses the prevalence of conspiracy theories in the phenomenon of Donald Trump and Trumpism, and the

paranoid style of American politics that existed long before, first identified with Richard Hofstadter. Hellinger looks critically at both those who hold conspiracy theory beliefs and those who rush to dismiss them. Hellinger argues that we need to acknowledge that the exercise of power by elites is very often conspiratorial and invites both realistic and outlandish conspiracy theories. How we parse the realistic from the outlandish demands more attention than typically accorded in academia and journalism. Tensions between global hegemony and democratic legitimacy become visible in populist theories of conspiracy, both on the left and the right. He argues that we do not live in an age in which conspiracy theories are more profligate, but that we do live in an age in which they offer a more profound challenge to the constituted state than ever before.

In a Box Springer Nature

The COVID-19 pandemic has offered the world and its governments many challenges in how they will conduct their responsibilities and best assist their citizens. The COVID-19 pandemic not only brought a global health emergency, but also helped to shed light on systemic inequalities, caused conspiracy and distrust within the masses, and exhausted global health services. The government and nonprofit sector, including healthcare, education, and social service organizations, will have to utilize the best practices, greater collaboration, and joint venturing to survive post pandemic. The Handbook of Research on Transforming Government, Nonprofits, and Healthcare in a Post-Pandemic Era serves as a resource for those in education, healthcare, government, social service, and other nonprofit organizations who wish to

advance their missions in an age of uncertainty. It further discusses how democracy can continue to advance the world, its countries, and the way that we see one another. Covering topics such as BIPOC academic leaders, economic development, and health science education, this premier reference source is an essential resource for government officials, public administration, community leaders, advocacy networks, social service organizations, hospital administrators, health officials, medical professionals, students and faculty of higher education, researchers, and academicians.

The Future of Us Taylor & Francis
Bridge the gap in opportunity to overcome the gap in achievement! Although out-of-school factors that limit student success may seem like obstacles too big to address, this guidebook provides the necessary direction to bridge the opportunity gap and close the achievement gap. Step-by-step instructions on how to conduct a community equity audit, along with detailed case studies, activities, and discussion questions give readers the power to assess opportunity gaps and eliminate them. A community equity audit asks questions such as: • Do the children in my community have the same opportunity as children in other communities? • Does my community have the same resources as other communities? • If my community needs more resources how can we provide them?

Authoritarian Populism and the Rural World Routledge

This collection provides a deep engagement with the political implication of Black Lives Matter. This book covers a broad range of topics using a variety of methods and

epistemological approaches. In the twenty-first century, the killings of Black Americans have sparked a movement to end the brutality against Black bodies. In 2013, #BlackLivesMatter would become a movement-building project led by Alicia Garza, Patrisse Cullors, and Opal Tometi. This movement began after the acquittal of George Zimmerman, who murdered 17-year-old Trayvon Martin. The movement has continued to fight for racial justice and has experienced a resurgence following the 2020 slayings of Ahmaud Arbery, George Floyd, Breonna Taylor, Sean Reed, Tony McDade, and David McAtee among others. The continued protests raise questions about how we can end this vicious cycle and lead Blacks to a state of normalcy in the United States. In other words, how can we make any advances made by Black Lives Matter stick? The chapters in this book were originally published in the journal *Politics, Groups, and Identities*.

Emerging Issues and Trends in Education Corwin Press

A roadmap for how we can rebuild America's working class by transforming workforce education and training. The American dream promised that if you worked hard, you could move up, with well-paying working-class jobs providing a gateway to an ever-growing middle class. Today, however, we have increasing inequality, not economic convergence. Technological advances are putting quality jobs out of reach for workers who lack the proper skills and training. In *Workforce Education*, William Bonvillian and Sanjay Sarma offer a roadmap for rebuilding America's working class. They argue that we need to train more workers more quickly, and they describe innovative methods of workforce education that are being

developed across the country.

Zero-Carbon Industry Springer

The current expansion in the United States is one of the longest on record. Economic growth since the financial crisis has also been amongst the

strongest in the OECD. Robust job growth has helped bring people into employment and reduce the unemployment rate. Partly as a result, wellbeing is ...
