Financial Statement Analysis and Earnings Forecasting is the process of analyzing historical financial statement data for the purpose of developing forecasts of future earnings. This process is important because it is central to the valuation of companies and the securities they issue. After a short introduction, Section 2 delves into the question "Why earnings"? Focusing on dividend policy irrelevance, the author describes key analytical results that imply that expected earnings are the fundamental determinant of both equity and enterprise value. Section 3 examines the issues involved in selecting the earnings metric to forecast. Once an earnings metric has been chosen, the next question to ask is "How useful are historical accounting numbers for developing forecasts of that metric?" Sections 4 through 8 focus on this question. Section 4 discusses the general role of econometric modeling. Section 5 reviews time-series models. Section 6 examines the choices a researcher makes when using panel-data approaches and the author describes the advantages of these approaches. Section 7 reviews the role of accounting measurement in determining the usefulness of historical accounting numbers for developing forecasts of future earnings. Section 8 examines approaches for forecasting the higher moments of future earnings and section 9 provides a summary. *Financial Statement Analysis and Business Valuation for the Practical Lawyer* McGraw-Hill Education

Over 200,000 copies sold! Thomas R. Ittelson's master work for entrepreneurs, non-financial managers, business students, lawyers, lenders, and investors - the bestselling book of its kind, with over 200,000 copies in print - has gotten even better with this 20th anniversary edition. Ittelson is an expert at translating complicated financial topics in an accessible way for non-financial audiences. In this book, he empowers readers by clearly and simply demonstrating how the three major accounting statements interact to offer a snapshot of a company's financial health. This book teaches readers how to use specialized accounting vocabulary and makes accessible the structure and purpose of the three major numeric statements that describe a company's financial condition. Each statement paints a different and essential picture - the "three-legged stool" of company reporting: The income statement shows the manufacturing (or service offerings) and selling actions of the company that result in profit or loss during a period. It gives a very important perspective on the company's performance, its profitability. The cash flow statement details cash into and out of the company for a period. You need money to make money. Running out of cash is bad. Duh. The balance sheet records at the end of a period, an instant in time, what the company owns and what it owes, including the owners' stake, called shareholders' equity. With two new major topic sections (nonprofit organization accounting and pricing theory for profitability) and spot color reformatting to improve comprehension, this third edition of Financial Statements is simply the clearest and most comprehensive introduction to

financial reporting available. No accounting background is required.
