The aim of this book is to explore the definition(s) of 'theatre' and 'metatheatre' that scholars use when studying the ancient Greek world. Although in modern languages their meaning is mostly straightforward, both concepts become problematical when applied to ancient reality. In fact, 'theatre' as well as 'metatheatre' are used in many different, sometimes even contradictory, ways by modern scholars. Through a series of papers examining questions related to ancient Greek theatre and dramatic performances of various genres the use of those two terms is problematized and put

into question. Must ancient Greek theatre be reduced to what was performed in proper theatre-buildings? And is everything was performed within such buildings to be considered as 'theatre'? How does the definition of what is considered as theatre evolve from one period to the other? As for 'metatheatre', the discussion revolves around the interaction between reality and fiction in dramatic pieces of all genres. The various definitions of 'metatheatre' are also explored and explicated by the papers gathered in this volume, as well as the question of the distinction between paratheatre (understood as paratragedy/comedy) and metatheatre. Readers will be encouraged by the diversity of approaches presented in this book to re-think their own understanding and use of 'theatre' and

'metatheatre' when examining ancient Greek reality.

illuminates the entirety of Turkish competition law in the first such treatise of its kind, spanning across the historical roots of legislation, policy, and institutions, to substantive aspects, enforcement, and procedure. All components of the law are individually discussed, with extensive references to essential case law that are further enriched by the author's vast experience in the field. The book provides a comprehensive and in-depth analysis of the competition law regime in Turkey, against the backdrop of the country's international commitments, as well as

recent amendments to the law. The book is an essential guide for practitioners and academics alike, and for all interested in the future of Turkish competition law in a globalized economy. For its comparative analysis and insights, it is of value to the entire competition community.

Timeless wisdom on growing old gracefully from one of ancient Rome's greatest philosophers Worried that old age will inevitably mean losing your libido, your health, and possibly your marbles too? Well, Cicero has some good news for you. In *How to Grow Old*, the great Roman orator and statesman eloquently

describes how you can make the second half of life the best part of all—and why you might discover that reading and gardening are actually far more pleasurable than sex ever was. Filled with timeless wisdom and practical guidance, Cicero's brief, charming classic—written in 44 BC and originally titled *On Old Age*—has delighted and inspired readers, from Saint Augustine to Thomas Jefferson, for more than two thousand years. Presented here in a lively new translation with an informative new introduction and the original Latin on facing pages, the book directly addresses the greatest fears of growing older and persuasively argues why these worries are greatly exaggerated—or altogether mistaken. Montaigne said Cicero's book "gives one an appetite for growing old." The American founding father John Adams read it repeatedly in his later years. And today its lessons are more relevant than ever in a world obsessed with the futile pursuit of youth.

Rampant industrialization has caused high levels of contamination by various

toxic chemicals in our water bodies, which is a matter of concern in terms of ecosystems, as well as human and animal health. Polluted wastewater can contaminate drinking water and is also a causal factor for bio-magnification of heavy metals into our food cycle. In the last decade, several methodologies have been adopted to clean the wastewaters, and among these, microbial remediation has emerged as an effective technology. Several variants of microbial technologies have been developed for wastewater treatment and biodegradation specific to the industry, type of waste and toxicity of the chemicals. This book describes the recent advances in microbial degradation and microbial remediation of various xenobiotic compounds in soil and wastewater. It also explains various modern microbial technologies for biodegradation and wastewater treatment. It covers various microbial technologies for wastewater treatment, biodegradation, bioremediation and solid waste management. Gathering contributions

from leading international it focuses on the status quo in industrial wastewater treatment and its biodegradation. The book is intended for researchers in the field of industrial wastewater, students of environmental sciences and practitioners in water pollution abatement.

Branding a Store shows how to build a strong, independent retail brand identity to remain competitive in today's global marketplace. First the book explains the distinction between retail brands and manufacturer brands, and assesses the increasing conflict between the two. The author explains in detail the potential benefits of a strong retail brand for both the retailer and the consumer. It discusses the factors to consider when positioning the brand: assortment; price; convenience; and customer experience. The author considers the three competitive strategies to follow to build a strong, distinct brand identity: increasing sales; cutting costs; and increasing differentiation from the competition. Then he explains the most

effective ways to communicate with the consumer. Finally he offers insights into the future development of successful retail brands. *How to Be a Friend* Basic Books

A splendid new translation of one of the greatest books on friendship ever written In a world where social media, online relationships, and relentless self-absorption threaten the very idea of deep and lasting friendships, the search for true friends is more important than ever. In this short book, which is one of the greatest ever written on the subject, the famous Roman politician and philosopher Cicero offers a compelling guide to finding, keeping, and appreciating friends. With wit and wisdom, Cicero shows us not only how to build friendships but also why they must be a key part of our lives. For, as Cicero says, life without friends is not worth living. Filled with timeless advice and insights, Cicero's heartfelt and moving classic—written in 44 BC and originally titled *De Amicitia*—has inspired readers for more than two thousand years, from St. Augustine and Dante to Thomas Jefferson and John Adams. Presented here in

a lively new translation with the original Latin on facing pages and an inviting introduction, *How to Be a Friend* explores how to choose the right friends, how to avoid the pitfalls of friendship, and how to live with friends in good times and bad. Cicero also praises what he sees as the deepest kind of friendship—one in which two people find in each other “another self” or a kindred soul. An honest and eloquent guide to finding and treasuring true friends, *How to Be a Friend* speaks as powerfully today as when it was first written.

An extraordinary mathematical conference was held 5-9 August 1990 at the University of California at Berkeley: From Topology to Computation: Unity and Diversity in the Mathematical Sciences An International Research Conference in Honor of Stephen Smale's 60th Birthday The topics of the conference were some of the fields in which Smale has worked: • Differential Topology • Mathematical Economics • Dynamical Systems • Theory of Computation • Nonlinear Functional Analysis •

Physical and Biological Applications This book comprises the proceedings of that conference. The goal of the conference was to gather in a single meeting mathematicians working in the many fields to which Smale has made lasting contributions. The theme "Unity and Diversity" is enlarged upon in the section entitled "Research Themes and Conference Schedule." The organizers hoped that illuminating connections between seemingly separate mathematical subjects would emerge from the conference. Since such connections are not easily made in formal mathematical papers, the conference included discussions after each of the historical reviews of Smale's work in different fields. In addition, there was a final panel discussion at the end of the conference.

Timeless wisdom on death and dying from the celebrated Stoic philosopher Seneca "It takes an entire lifetime to learn how to die," wrote the Roman Stoic

philosopher Seneca (c. 4 BC–65 AD). He counseled readers to "study death always," and took his own advice, returning to the subject again and again in all his writings, yet he never treated it in a complete work. *How to Die* gathers in one volume, for the first time, Seneca's remarkable meditations on death and dying. Edited and translated by James S. Romm, *How to Die* reveals a provocative thinker and dazzling writer who speaks with a startling frankness about the need to accept death or even, under certain conditions, to seek it out. Seneca believed that life is only a journey toward death and that one must rehearse for death throughout life. Here, he tells us how to practice for death, how to die well, and how to understand the role of a good death in a good life. He stresses the universality of death, its importance as life's final rite of passage, and its ability to liberate us from pain, slavery, or political oppression. Featuring beautifully rendered new translations, *How to Die* also includes an enlightening introduction, notes, the original Latin texts, and an epilogue presenting Tacitus's

description of Seneca's grim suicide.

Confronting the Experts brings together six personal case histories of challenges to establishment experts. The authors tell why they questioned conventional wisdom, what methods they used, how they dealt with the experts' response, and what lessons they learned.

Because the book shows how powerful groups can get their way by gaining the support of intellectual authorities and also how these authorities can be challenged, it provides insights into the issues of power, dissent, and social change. Included are Sharon Beder's research on sewage and how it helped to undermine the credibility of the Sydney Water Board; Mark Diesendorf's scientific and social critique of fluoridation; Edward Herman's exposition of the flaws in the establishment perspective on terrorism; Harold

Hillman's questioning of the validity of standard methods used in biology, such as subcellular fractionation and electron microscopy; Michael Mallory and Gordon Moran's challenge to the orthodox interpretation of a famous painting in Siena, Italy; and Dhirendra Sharma's confrontation with India's nuclear establishment.

This book constitutes the refereed proceedings of the joint conference on Machine Learning and Knowledge Discovery in Databases: ECML PKDD 2010, held in Barcelona, Spain, in September 2010. The 120 revised full papers presented in three volumes, together with 12 demos (out of 24 submitted demos), were carefully reviewed and selected from 658 paper submissions. In addition, 7 ML and 7 DM papers were distinguished by the program chairs on the basis of their exceptional scientific quality and high impact on the field. The conference intends to provide an international forum for the discussion of the latest high quality research results in all areas related to machine learning and knowledge discovery in databases. A

topic widely explored from both ML and DM perspectives was graphs, with motivations ranging from molecular chemistry to social networks.

This book provides a straightforward and easy-to-understand overview of beneficial plant-bacterial interactions. It features a wealth of unique illustrations to clarify the text, and each chapter includes study questions that highlight the important points, as well as references to key experiments. Since the publication of the first edition of *Beneficial Plant-Bacterial Interactions*, in 2015, there has been an abundance of new discoveries in this area, and in recent years, scientists around the globe have begun to develop a relatively detailed understanding of many of the mechanisms used by bacteria that facilitate plant growth and development. This knowledge is gradually

becoming an integral component of modern agricultural practice, with more and more plant growth-promoting bacterial strains being commercialized and used successfully in countries throughout the world. In addition, as the world's population continues to grow, the pressure for increased food production will intensify, while at the same time, environmental concerns, mean that environmentally friendly methods of food production will need to replace many traditional agricultural practices such as the use of potentially dangerous chemicals. The book, intended for students, explores the fundamentals of this new paradigm in agriculture, horticulture, and environmental cleanup.

 "Born a slave, the Roman Stoic philosopher Epictetus (c. 55-135 AD) taught that mental freedom is supreme, since it can liberate one anywhere, even in a prison ... Freedom, for Epictetus, is not a human right or a political prerogative but a psychological and ethical achievement, a gift that we alone can bestow on ourselves ... How to Be Free features splendid

new translations and the original Greek on facing pages, a compelling introduction that sets Epictetus in context and describes the importance of Stoic freedom today, and an invaluable glossary of key words and concepts. The result is an unmatched introduction to this powerful method of managing emotions and handling life's situations, from the most ordinary to the most demanding."-- Provided by the publisher.

 The conference "Laser Science and Technology" was held May 11-19, 1987 in Erice, Sicily. This was the 12th conference organized by the International School of Quantum Electronics, under the auspices of the "Ettore Majorana" Center for Scientific Culture. This volume contains both the invited and contributed papers presented at the conference, covering current research work in two areas: new laser sources, and laser applications. The operation of the first laser by Dr. Theodore Maiman in 1960 initiated a decade of scientific exploration of new laser sources. This was followed by the decade of the 1970s, which was

characterized by "technology push" in which the discoveries of the 1960s were seeking practical application. In the 1980s we are instead seeking "applications pull," in which the success and rapid maturing of laser applications provides both inspiration and financial resources to stimulate additional work both on laser sources and applications. The papers presented in these Proceedings attest to the great vitality of research in both these areas: New Laser Sources. The papers describe current developments in ultra violet excimer lasers, X-ray lasers, and free electron lasers. These new lasers share several characteristics: each is a potentially important coherent source; each is at a relatively short wavelength (below 1 micrometer); and each is receiving significant development attention today.

 Timeless techniques of effective public speaking from ancient Rome's greatest orator All of us are faced countless times with the challenge of persuading others, whether we're trying to win a trivial argument

with a friend or convince our coworkers about an important decision. Instead of relying on untrained instinct—and often floundering or failing as a result—we'd win more arguments if we learned the timeless art of verbal persuasion, rhetoric. *How to Win an Argument* gathers the rhetorical wisdom of Cicero, ancient Rome's greatest orator, from across his works and combines it with passages from his legal and political speeches to show his powerful techniques in action. The result is an enlightening and entertaining practical introduction to the secrets of persuasive speaking and writing—including strategies that are just as effective in today's offices, schools, courts, and political debates as they were in the Roman forum. *How to Win an Argument* addresses proof based on rational argumentation, character, and emotion; the parts of a speech; the plain, middle, and grand styles; how to persuade no matter what audience or circumstances you face;

and more. Cicero's words are presented in lively translations, with illuminating introductions; the book also features a brief biography of Cicero, a glossary, suggestions for further reading, and an appendix of the original Latin texts. Astonishingly relevant, this unique anthology of Cicero's rhetorical and oratorical wisdom will be enjoyed by anyone who ever needs to win arguments and influence people—in other words, all of us.

An eminent philosopher reflects on the nature of friendship, past and present. Friends are a constant feature of our lives, yet friendship itself is difficult to define. Even Michel de Montaigne, author of the seminal

essay "Of Friendship," found it nearly impossible to account for the great friendship of his life. Why is something so commonplace and universal so hard to grasp? What is it about the nature of friendship that proves so elusive? In *On Friendship*, the acclaimed philosopher Alexander Nehamas launches an original and far-ranging investigation of friendship. Exploring the long history of philosophical thinking on the subject, from Aristotle to Emerson and beyond, and drawing on examples from literature, art, drama, and his own life, Nehamas shows that for centuries, friendship was as much a public relationship as it was a private one—inseparable from politics and commerce, favors and perks. Now that it is more firmly in the private realm, Nehamas holds, close friendship is central to the good life. Profound and affecting, *On Friendship* sheds light on why we love our friends—and how they determine who we are, and who we might become.
