Intellectual Property in Global Governance critically examines the evolution of international intellectual property law-making from the build up to the TRIPS Agreement, through the TRIPS and post-TRIPS era. The book focuses on a number of thematic intellectual property issue linkages, exploring the formal and informal institutional interactions and multi-stakeholder holder intrigues implicated in the global governance of intellectual property. Using examples from bio-technology, bio-diversity, bio-prospecting and bio-piracy it investigates the shift or concentration in the focus of innovation from physical to life sciences and the ensuing changes in international intellectual property law making and their implications for intellectual property jurisprudence. It examines the character of the reception, resistance and various nuanced reactions to the changes brought about by the TRIPS Agreement, exploring the various institutional sites and patterns of such responses, as well as the escalation in the issue-linkages associated with the concept and impact of intellectual property law. Drawing upon multiple methodological approaches including law and legal theory; regime theory, globalization and global governance Chidi Oguamanam explores the intellectual property dynamics in the "Global Knowledge Economy" focusing on digitization and information revolution phenomenon and the concept of a post-industrial society. The book articulates an agenda for global governance of intellectual property law in the 21st century and speculates on the future of intellectual property in North-South relations.

Intellectual Property and Public Health in the Developing World Edward Elgar Pub

We all create intellectual property. We all use intellectual property. Intellectual property is the most pervasive yet least understood way we regulate expression. Despite its importance to so many aspects of the global economy and daily life, intellectual property policy remains a confusing and arcane subject. This engaging book clarifies both the basic terms and the major conflicts surrounding these fascinating areas of law, offering a layman's introduction to copyright, patents, trademarks, and other forms of knowledge falling under the purview of intellectual property rights. Using vivid examples, noted media expert Siva Vaidhyanathan illustrates the powers and limits of intellectual property, distilling with grace and wit the complex tangle of laws, policies, and values governing the dissemination of ideas, expressions, inventions, creativity, and data collection in the modern world. Vaidhyanathan explains that intellectual property exists as it does because powerful interests want it to exist. The strongest economies in the world have a keen interest in embedding rigid methods of control and enforcement over emerging economies to preserve the huge economic interests linked to their copyright industries-film, music, software, and publishing. For this reason, the fight over the global standardization of intellectual property has become one of the most important sites of tension in North-South global relations. Through compelling case studies, including those of Starbucks, Coca-Cola, Sony, Amazon, and Google Books, Vaidhyanathan shows that the modern intellectual property systems reflect three centuries of changes in politics, economics, technologies, and social values. Although it emerged from a desire to foster creativity while simultaneously protecting it, intellectual property today has fundamentally shifted to a political dimension.

Intellectual property rights such as patents can reduce access to knowledge in genetics, health, agriculture, education and information technology, particularly for people in developing countries. Global Intellectual Property Rights shows how the new global rules of intellectual property have been the product of the strategic behaviour of multinationals, rather than democratic dialogue. The final section of the book suggests strategies aimed at developing more flexible standard for poor countries, and for keeping knowledge in the intellectual commons.

From Goods to a Good Life WIPO

In economic sectors crucial to human welfare – agriculture, education, and medicine – a small number of firms control global markets, primarily by enforcing intellectual property (IP) rights incorporated into trade agreements made in the 1980s onward. Such rights include patents on seeds and medicines, copyrights for educational texts, and trademarks in consumer products. According to conventional wisdom, these agreements likewise ended hopes for a 'New International Economic Order,' under which wealth would be redistributed from rich countries to poor. Sam F. Halabi turns this conventional wisdom on its head by demonstrating that the New International Economic Order never faded, but rather was redirected by other treaties, formed outside the nominally economic sphere, that protected poor countries' interests in education, health, and nutrition and resulted in redistribution and regulation. This illuminating work should be read by anyone seeking a nuanced view of how IP is shaping the global knowledge economy.
