Fundamental Statistics for the Behavioral
Sciences Wadsworth Publishing Company
This book occupies a unique position in the
field of statistical analysis in the
behavioural and social sciences in that it
targets learners who would benefit from

learning more conceptually and less computationally about statistical procedures and the software packages that can be used to implement them. This book provides a comprehensive overview of this important research skill domain with an emphasis on visual support for learning and better understanding. The primary focus is on fundamental concepts, procedures and interpretations of statistical analyses within a single broad illustrative research context. The book covers a wide range of descriptive, correlational and inferential statistical procedures as well as more advanced procedures not typically covered in introductory and intermediate statistical texts. It is an ideal reference for postgraduate students as well as for researchers seeking to broaden their conceptual exposure to what is possible in statistical analysis.

In RESEARCH METHODS FOR THE BEHAVIORAL SCIENCES, 6th Edition, Fredrick J Gravetter and Lori-Ann B.

Forzano help students see how interesting and exciting experimental and nonexperimental research can be. The text leads students through the research process from start to finish, including tips and strategies for generating research ideas and hypotheses, selecting measures and participants, and designing research. This step-by-step approach emphasizes the decisions researchers must make at each stage of the process. The authors avoid a cookbook presentation of just the facts by linking terminology with applied concepts; their lecture in a book style emphasizes clear explanations of topics. Research examples present topics of particular interest to students, and content throughout the book reflects current APA guidelines. Essentials of Statistics for the Behavioral Sciences Cengage Learning
FUNDAMENTAL STATISTICS FOR THE BEHAVIORAL SCIENCES focuses on

providing the context of statistics in behavioral research, while emphasizing the importance of looking at data before jumping into a test. This practical approach provides students with an understanding of the logic behind the statistics, so they understand why and how certain methods are used -- rather than simply carry out techniques by rote. Students move beyond number crunching to discover the meaning of statistical results and appreciate how the statistical test to be employed relates to the research questions posed by an experiment. Written in an informal style, the text provides an abundance of real data and research studies that provide a real-life perspective and help students learn and understand concepts. In alignment with current trends in statistics in the behavioral sciences, the text emphasizes effect sizes and meta-analysis, and integrates frequent demonstrations of computer analyses through SPSS and R. Statistical Power Analysis for the Behavioral Sciences Cram101

Based on over 30 years of successful teaching experience in this course, Robert Pagano's introductory text takes an intuitive, concepts-based approach to descriptive and inferential statistics. He uses the sign test to introduce inferential statistics, empirically derived sampling distributions, many visual aids, and lots of interesting examples to promote student understanding. One of the hallmarks of this text is the positive feedback from students -- even students who are not

mathematically inclined praise the text for its clarity, detailed presentation, and use of humor to help make concepts accessible and memorable. Thorough explanations precede the introduction of every formula, and the exercises that immediately follow include a step-by-step model that lets students compare their work against fully solved examples. This combination makes the text perfect for students taking their first statistics course in psychology or other social and behavioral sciences.
