Crossing Numbers of Graphs is the first book devoted to the crossing number, an increasingly popular object of study with surprising connections. The field has matured into a large body of work, which includes identifiable core results and techniques. The book presents a wide variety of ideas and techniques in topological graph theory, discrete geometry, and computer science. The first part of the text deals with traditional crossing number, crossing number values, crossing lemma, related parameters, computational complexity, and algorithms. The second part includes the rich history of alternative crossing numbers, the rectilinear crossing number, the pair crossing number, and the independent odd crossing number. It also includes applications of the crossing number outside topological graph theory. Aimed at graduate students and professionals in both mathematics and computer science. The first book of its kind devoted to the topic. Authored by a noted authority in crossing numbers.

How do we know right from wrong, good from bad, help from hindrance, and how can we judge the behavior of others?

Ethics are the rules and guidelines that we use to make such judgements. Often there are no clear answers, which make this subject both interesting and potentially frustrating. In this book the authors offer readers the opportunity to develop and express their own opinions in relation to ethics in psychology. There are a number of famous many psychological studies that appear to have been harmful or cruel to the people or animals who took part in them. For example, memory researchers carried out studies on a man who had no memory for over forty years, but because he had no memory, he was never able to agree to the studies. Is this a reasonable thing to do to someone? Comparative psychologist Harry Harlow found that he could create severe and lasting distress in monkeys by keeping them in social isolation. Is this a reasonable thing to do even if we find out useful things about

human distress? If you were able to use psychological techniques to break someone down so that they revealed information that was useful to your government would you do it? If so, why and if not, why not? These ethical issues are not easy to resolve and the debates continue as we encounter new dilemmas. The book uses many examples of psychological research to look at key ethical issues ethical guidelines of psychologists socially sensitive research ethics in applied psychology the use of animals in research This book will be essential reading for and undergraduate and pre-undergraduate students studying psychology and students of other subjects concerned with ethics.

This report focuses on issues relating to the development of individualized education programs for and placement of students who are classified as having mental retardation, learning disabilities, behavioral disabilities, or serious emotional disturbances. The U.S. Commission on Civil Rights examined present-day barriers and inequities that deny students with these types of disabilities an equal opportunity to participate in educational programs. The report analyzes and evaluates the Office for Civil Rights' (OCR) implementation, compliance, and enforcement efforts for Section 504 of the Rehabilitation Act. It discusses other Federal disability laws, such as the Individuals with Disabilities Education Act (IDEA), and Title II of the Americans with Disabilities Act, to the extent that they relate to Section 504.
