If you're looking for advice on how to make a fast buck and get an adrenalin high from investing, this book is not for you. If you're looking to build wealth over time, Kim Shannon covers a common sense approach that Sionna Investment Managers uses to manage money on behalf of its clients. Shannon and her investment team follow a path well-established by the most successful value investors: Benjamin Graham, David L. Dodd, Sir John Templeton, Peter Lynch and the "world's greatest investor," Warren Buffett. However, Sionna has a unique take on value — one that addresses the idiosyncrasies of concentrated markets — like those within Canada. Despite proven success, value investing struggles for respect, particularly during bubbles and declines when investors take cues from headlines instead of reason and experience. Shannon discusses the psychological impulses underlying mispriced stocks that become unmoored from their intrinsic value. Citing examples, she endorses understanding investment psychology and using relative value to buy illogically discounted shares. Suited for investors at all levels, The Value Proposition reveals Sionna's quantitative and qualitative processes and a "Sherlock Holmes" orientation to reading financial statements and assessing a company's management. After 30 successful years in the hard knocks investment world, Shannon views herself fortunate to have found her calling managing money for institutions and individuals. She describes the unlikely journey that led to an industry that has only recently

attracted women. Her account of influential mentors, the merits of staying independent and her creation of a strong Sionna culture make for an engaging and informative read.

Behavioral finance presented in this book is the second-generation of behavioral finance. The first generation, starting in the early 1980s, largely accepted standard finance's notion of people's wants as "rational" wants—restricted to the utilitarian benefits of high returns and low risk. That first generation commonly described people as "irrational"—succumbing to cognitive and emotional errors and misled on their way to their rational wants. The second generation describes people as normal. It begins by acknowledging the full range of people's normal wants and their benefits—utilitarian, expressive, and emotional—distinguishes normal wants from errors, and offers guidance on using shortcuts and avoiding errors on the way to satisfying normal wants. People's normal wants include financial security, nurturing children and families, gaining high social status, and staying true to values. People's normal wants, even more than their cognitive and emotional shortcuts and errors, underlie answers to important questions of finance, including saving and spending, portfolio construction, asset pricing, and market efficiency.

Active Investing in the Age of Disruption John Wiley & Sons

Successful investment strategies are specific implementations of general theories. An investment strategy that lacks a theoretical justification is likely to be false. Hence, an asset manager should concentrate her efforts on developing a theory rather than on backtesting potential trading rules. The purpose of this Element is to introduce machine learning (ML) tools that can help asset managers discover economic and financial theories. ML is not a black box, and it does not

necessarily overfit. ML tools complement rather than replace the classical statistical methods. Some of ML's strengths include (1) a focus on out-of-sample predictability over variance adjudication; (2) the use of computational methods to avoid relying on (potentially unrealistic) assumptions; (3) the

ability to "learn" complex specifications, including nonlinear, hierarchical, and noncontinuous interaction effects in a high-dimensional space; and (4) the ability to disentangle the variable search from the specification search, robust to multicollinearity and other substitution effects.
