Under the influence of mounting foreign competition in the late-Victorian and Edwardian periods, many Britons sought to

bolster England's world position by reinforcing the unity of the Empire. For the most part their effort were channelled into an attempt to construct a formal political union or federation of Britain's overseas dominions. However, when the so-called Imperial Federation Movement failed to produce a viable constitutional solution the problem of unity a number of people began to search for an alternative, non-political approach. In this connection a campaign was mounted during the first two decades of the twentieth century that came to emphasise the informal, spiritual ties which supposedly bound the Empire together. This title, first published in 1987, brings to light the assumptions, aspirations and schemes of those predominantly middle-class figures who

orchestrated the Imperial Studies Movement at the turn of the twentieth-century. This title will be of interest to students of history and education.

29 CFR, Part 1926 University of Wales Press

Work on the miners' Lock-Out of 1926 tends to focus on the perspective of the National Union of Mineworkers, while nothing has been written which attempts to examine, for example, how miner's wives coped for six months without pay. This book investigates the Lock-Out from the perspective of gender relations.

This book, first published in 1980, is a guide to the major forces in the subculture of science fiction. It analyses the history of the field and the related developments, for instance the Bomb, that have shaped the literature. It examines the complex of activity and background tradition, the body of accepted beliefs and conventions, and the ethics and values of the world of science fiction.

Conn's study includes familiar places like the Metropolitan Museum of Art and the Academy of Natural Sciences, but he also draws attention to forgotten ones, like the Philadelphia Commercial Museum, once the repository for objects from many turn-of-the-century world's fairs. What emerges from Conn's analysis is that museums of all kinds shared a belief that knowledge resided in the objects themselves. Using what Conn has termed "object-based epistemology," museums of the late nineteenth century were on the cutting edge of American intellectual life. By the first quarter of the twentieth century, however, museums had largely been replaced by research-oriented universities as places where new knowledge was produced. According to Conn, not only did this mean a change in the way knowledge was conceived, but also, and perhaps more importantly, who would have access to it.

University of Chicago Press

The Cal/OSHA Pocket Guide for the Construction Industry is a handy guide for workers, employers, supervisors, and safety personnel. This latest 2011 edition

is a quick field reference that summarizes selected safety standards from the California Code of Regulations. The major subject headings are alphabetized and cross-referenced within the text, and it has a detailed index. Spiral bound, 8.5 x 5.5"

The object of this book is to provide with a popular and a comprehensive edition of Sappho, containing all that is so far known of her unique personality and her incompatible poems Little remains today of the writings of the archaic Greek poet Sappho (fl. late 7th and early 6th centuries B.C.E.), whose work is said to have filled nine papyrus rolls in the great library at Alexandria some 500 years after her death. The surviving texts consist of a lamentably small and fragmented body of lyric poetry--among them, poems of invocation, desire, spite, celebration, resignation, and remembrance--that nevertheless enables us to hear the living voice of the poet Plato called the tenth Muse. Sappho is rated as the supreme poetess and is regarded in the same vein as Shakespeare and Homer the supreme

poets.

In 1926 Cornell University Press
Levy-Bruhl speculates about what he posited as the two basic mind-sets of mankind; "primitive" and "Western." The primitive mind does not differentiate the supernatural from reality, but rather uses "mystical participation" to manipulate the world. Moreover, the primitive mind doesn't address contradictions. The Western mind, by contrast, uses speculation and logic. 'How Natives Think' IS an accurate and valuable contribution to anthropology.

29 Cfr 1926 OSHA Construction Industry Regulations: July 2013 Edition

Harvard University Press
A new edition of Pound's groundbreaking shorter poems. If the invention of literary modernism is usually attributed to James Joyce, T. S. Eliot and Ezra Pound, it was Pound alone who provided (in Hugh Kenner's words) "the synergetic presence") to convert individual experiment into an international movement. In 1926 Pound carefully sculpted his body of shorter poems into a definitive collection which would best show the concentration of force, the

economy of means, and the habit of analysis that were, to him, the hallmarks of the new style. This collection, where Pound presented himself in a variety of characters or "masks," was called *Personae*. In 1926, *Personae's* publication gave solidity to a movement today the work stands as one of the classic texts of the twentieth century. Pound scholars Lea Baechler (of Columbia) and A. Walton Litz (Holmes Professor of English Literature at Princeton) have prepared a corrected text and supplied an informative "Note on the Text" explaining both Pound's original criteria for his selection and the volume's subsequent history.

The book also features: OSHA Forms 300, 300A, and 301 Sharps Injury Log Selected OSHA letters of interpretation

The Visitor Univ of California Press
The Electrification of Russia, 1880-1926 is the first full account of the widespread adoption of electricity in Russia, from the beginning in the 1880s to its early years as a state technology under Soviet rule. Jonathan Coopersmith has mined the archives for both the tsarist and the Soviet periods to examine a crucial element in the modernization of Russia. Coopersmith

shows how the Communist Party forged an alliance with engineers to harness the socially transformative power of this science-based enterprise. A centralized plan of electrification triumphed, to the benefit of the Communist Party and the detriment of local governments and the electrical engineers. Coopersmith's narrative of how this came to be elucidates the deep-seated and chronic conflict between the utopianism of Soviet ideology and the reality of Soviet politics and economics.

In this thoroughly innovative work, Hans

Ulrich Gumbrecht evokes the year 1926 through explorations of such things as bars, boxing, movie palaces, hunger artists, airplanes, hair gel, bullfighting, film stardom and dance crazes. From the vantage points of Berlin, Buenos Aires, and New York, the reader is allowed multiple itineraries, ultimately becoming immersed in the activities, entertainments, and thought patterns of the citizens of 1926.
