Advancing Point and Figure in the 21st Century Point and Figure has been around for over 130 years and the method is just as essential for chart analysis today as it always has been. While the basic principles of the technique have remained unchanged, those working with Point and Figure must still push the boundaries of how it is used, looking to make it even more insightful and powerful. This is exactly what Jeremy du Plessis has achieved with 21st Century Point and Figure. Previously, it was thought that the lack of time on Point and Figure charts meant that time-based tools and indicators could not be used, and lack of volume meant that the importance of individual columns could not be determined. Jeremy du Plessis shows definitively that neither is the case and that with the use of lateral thinking there are also a host of other new techniques that can be added to Point and Figure charts and analysis. In this advanced practical guide, du Plessis explains: - How to use moving averages, Bollinger bands, Donchian channels and parabolic stop and reverse with Point and Figure charts. - How time-based indicators such as overbought/oversold, RSI, directional movement and MACD can be used with Point and Figure charts. - How column volume can be used to assess a column's strength and how volume at box level can be used to assess support and resistance areas. - How traditional accumulation distribution lines, such as on-balance volume and volume-price trend, can be used to enhance the reading of the chart. - How the analysis of relative strength and spreads can be enhanced using these new techniques. - Two new Point and Figure based market breadth indicators. Finally, he introduces a new Point and Figure based oscillator that can

also be used on time-based charts. All topics are illustrated with numerous high-quality, full colour charts and observations from years of trading experience. The techniques described here open up a whole world of new and advanced analysis tools. You will see that there is more to Point and Figure than you ever imagined, and that it is more flexible than has ever been realised before. If you employ Point and Figure analysis, ensure you don't miss out on these powerful new techniques - be sure to bring your analysis into the 21st century.

My aim in this book is to give essential advice on all the main aspects of freshwater garden fish ponds. I have tried to include some of the science of ponds while keeping the information easy to understand. Each chapter begins with an outline of the main points of the topic. Each point is then expanded on. My experience with ponds has mainly been in the warm temperate climate in Perth, Western Australia. The principles for fish ponds are similar worldwide but warm temperate climates like that of Perth intensify some of the problems in ponds. This book will therefore be particularly useful to pond owners in sunny climates. The book begins with pond design, starting with the position of the pond in the garden. I discuss the consequences of different pond sizes and depths, and of natural and artificial ponds. I talk about the advantages of a dual pond system. I give guidelines for these and for self-cleaning ponds. I also say why I recommend designing the pond with a sump, overflow, leaf skimmer, and automatic top-up valve. Lastly, I give my colour preference for the pond bottom and sides. Next, I advise on pond construction. Ponds can be built with concrete, bricks, rigid polyethylene, fibreglass or liners. I write about my experiences with ponds made from each of these materials and also my preferences for pipework materials. In the following chapter, I recommend various pumps, filters (including ultraviolet clarifiers), water features, underwater lights and copper ionizers. Choosing the right equipment will give you the right effect for the lowest cost and for the least effort. The chapter on fish gives information on types of fish, especially goldfish and koi. I advise on when a new pond is ready for fish and on the number of fish a pond can support. I give information on the handling, transporting, and feeding of fish, and on diseases and predators. The next chapter delivers general information on water plants, why you should have them and their role in the ecology of the pond. Plants provide shade, oxygen, food, habitat and cover from predators. They filter toxins and excessive nutrients from the water. I give advice on keeping plants, including information on fertilizer and pests. Finally, I give recommendations for pond maintenance including a routine. My advice is directed at pumps, filters, pond cleanliness, exchanging water and maintaining the pH and hardness. The maintenance is largely directed at algae control. I discuss the various forms of nuisance algae and control methods for microalgae, blanket weed, and slime algae. Other advice includes information on water testing and water treatments. Maintaining good water quality is fundamental to the success of any fish pond. "Good" water quality means the water's suitability for its proposed purpose. Water quality is affected by every aspect of a pond, from its design and construction to its pumps, filters and maintenance. Each chapter of this book tells how each aspect of the pond affects the water. Every fish pond is different. The solutions to one pond's problems may be very different to another pond's.

Point and Figure charts are one of the great secrets of the Technical Analysis world. Highly sophisticated and with a thoroughbred pedigree, they can, however, be overlooked by traders today. Jeremy du Plessis - one of the foremost Point and Figure experts in the world - returns with a fully updated second edition of this definitive guide in an effort to redress this imbalance. This second edition, with an extensive revision to the text and introduction of brand new techniques, demystifies the world of Point and Figure charting. It includes a detailed explanation of the history and development of the technique from its invention to the modern day, and covers the makeup of the chart patterns, why they are created, and how to interpret them. Throughout, readers are encouraged to understand Point and Figure charts from first principles, rather than just remember the names of a series of patterns. It is the first major work for 50 years to discuss in depth the original 1-box reversal method of Point and Figure charting and contrast it with the more popular 3-box reversal method. Further, the explanation of how to use Point and Figure charts to project targets and calculate risk-reward ratios is the most comprehensive ever seen. Also featured in the second edition are: - A step-by-step analysis of the FTSE 100

Index using the 3-box method, as well as the NASDAQ Composite Index, using the 1-box method - A detailed discussion of optimising techniques - An in-depth chapter on Analysing Point and Figure charts, extensively rewritten from the first edition - A new explanation of how Point and Figure parameters are chosen and the implications of choosing them - Two new Point and Figure construction methods never seen before - Point and Figure's contribution to market breadth, with a look at bullish percent and two brand new indicators - Full discussion of Point and Figure gaps and how they provide valuable information about the chart - Lesser known, more advanced techniques such as the use of moving averages, parabolic SAR and Bollinger Bands on Point and Figure charts - Price and volume activity histograms and how they provide information about support and resistance All this is illustrated with numerous colour charts and observations from years of trading experience. According to du Plessis, Point and Figure charts are the 'voice of the market'. This book helps you listen to, and understand, that voice. The study of human body measurements on a comparative basis is known as anthropometrics. Its applicability to the design process is seen in the physical fit, or interface, between the human body and the various components of interior space. Human Dimension and Interior Space is the first major anthropometrically based reference book of design standards for use by all those involved with the physical planning and detailing of interiors, including interior designers, architects, furniture designers, builders, industrial designers, and students of design. The use of anthropometric data, although no substitute for good design or sound professional judgment should be viewed as one of the many tools required in the design process. This comprehensive overview of anthropometrics consists of three parts. The first part deals with the theory and application of anthropometrics and includes a special section dealing with physically disabled and elderly people. It provides the designer with the fundamentals of anthropometrics and a basic understanding of how interior design standards are established. The second part contains easy-to-read, illustrated anthropometric tables, which provide the most current data available on human body size, organized by age and percentile groupings. Also included is data relative to the range of joint motion and body sizes of children. The third part contains hundreds of dimensioned drawings, illustrating in plan and section the proper anthropometrically based relationship between user and space. The types of spaces range from residential and commercial to recreational and institutional, and all dimensions include metric conversions. In the Epilogue, the authors challenge the interior design profession, the building industry, and the furniture manufacturer to seriously explore the problem of adjustability in design. They expose the fallacy of designing to accommodate the so-called average man, who, in fact, does not exist. Using government data, including studies prepared by Dr. Howard Stoudt, Dr. Albert Damon, and Dr. Ross McFarland, formerly of the Harvard School of Public Health, and Jean Roberts of the U.S. Public Health Service, Panero and Zelnik have devised a system of interior design reference standards, easily understood through a series of charts and situation drawings. With Human Dimension and Interior Space, these standards are now accessible to all designers of interior environments.
