This volume offers a comprehensive, empirical and methodological view over new scenarios recently emerged in language teaching and learning, such as blended learning, e-learning, ubiquitous, social, autonomous or lifelong learning, and also over some new (ICT-based) approaches that can support them (CALL, MALL, CLIL, LMOOCs).

Fundamental Considerations in Language Testing

Psychology Press

Length and width seem like inherent properties of an object to an adult, and kids have an innate sense of the approximate size of something. Yet specifically defining these

terms can be tricky. In simple language, the text of this book explains length and width through common objects. It also discusses how we can measure length and width with a ruler.

Great Teachers OECD Publishing

Offers a discussion of the basic concerns which underlie the development and use of language tests. Presenting a synthesis of research on testing, this book is useful for students on teacher education courses. It is also helpful for those professionally involved in designing and administering tests, acting as a complement to 'how to' books.

Realidades 2 Longman Italia

This revision of Bloom's taxonomy is designed to help teachers understand and implement standards-based curriculums.

Cognitive psychologists, curriculum specialists, teacher educators, and researchers have developed a two-dimensional framework,

focusing on knowledge and cognitive processes.

In combination, these two define what students are expected to learn in school. It explores curriculums from three unique perspectives- cognitive psychologists

(learning emphasis), curriculum specialists and teacher educators (C & I emphasis), and measurement and assessment experts (assessment emphasis).

This revisited framework allows you to connect learning in all areas of curriculum. Educators, or others interested in educational psychology or educational methods for grades K-12.

This report presents the conceptual foundations of the OECD Programme for International Student Assessment (PISA), now in its seventh cycle of comprehensive and rigorous international surveys of student knowledge, skills and well-being. Like previous cycles, the 2018 assessment covered reading, mathematics and science, with the major focus this cycle on reading literacy, plus an evaluation of students'

global competence – their ability to understand and appreciate the perspectives and world views of others. Financial literacy was also offered as an optional assessment.

Acquired Language

Disorders in Adulthood and Childhood

Pearson In the World Library of Psychologists series, international experts present career-long collections of what they judge to be their finest pieces - extracts from books, key articles, salient research findings, and their major practical theoretical contributions. Elaine Funnell has played an important role in the study of neuropsychology over the past 25 years. She has been at the forefront of groundbreaking research on individuals suffering with acquired disorders of written and/or spoken language resulting from

brain damage. With commentary by Nicola Pitchford and Andrew Ellis, this volume presents Elaine's most significant contributions in her two main specialist areas: adult neuropsychology of semantic disorders, with a focus on disorders of naming in dementia, and acquired language and literacy disorders in childhood. The publications included in this volume date back to 1988, where Elaine co-authored a major review of theories regarding the representation of meanings in the mind and brain. They then bring us right up-to-date with a previously unpublished paper from 2010, which has been recently edited by the co-author, Mike Kopelman, for this edition. Through her exceptional work, Elaine has greatly advanced our understanding of the brain processes behind written and spoken language, and this book represents an original and timely contribution to the field. *Acquired Language Disorders in Adulthood and Childhood* will be of

great interest to researchers and postgraduate students in adult and child neuropsychology, specifically for those specialising in semantic and language disorders. **Free Culture** Pearson School K12 Ethnic minority children now comprise over 75 percent of students in 100 of the largest cities in the United States. However, these students have not been given equal access to, nor benefited from, the contemporary mental health system as have their non-minority peers. *TEMAS (Tell-Me-A-Story) Assessment in Multicultural Societies* examines the health/mental care system in which professional service providers, including psychologists, labor to offer quality care for youth in the United States. The authors ardently support the use of the TEMAS assessment instrument as a useful tool for diagnosis of all youngsters, particularly its use on the growing

population of minority children and adolescents. Part I presents a rationale and context for employing TEMAS. Introductory chapters describe the mental health status of the population at-risk, as well as systems of care for youth where assessment and intervention are components. Topics to follow highlight a history of positive TEMAS test reviews with the detail required by instructors for preparing dedicated TEMAS courses. The volume thoroughly outlines cross-cultural studies and illustrates case examples of European-American, Hispanic/Latino, Asian-American, and forensic studies. *TEMAS (Tell-Me-A-Story) Assessment in Multicultural Societies* brings practical insight to instructors who teach standard assessment courses; clinicians, counselors, and school psychologists; assessment specialists; and administrators concerned with mental health services designed for children and adolescents.
