In his bestselling guide, *Doing Honest Work in College: How to Prepare Citations, Avoid Plagiarism, and Achieve Real Academic Success*, veteran teacher Charles Lipson brought welcome clarity to the principles of academic honesty as well as to the often murky issues surrounding plagiarism in the digital age. Thousands of students have turned to Lipson for no-

nonsense advice on how to cite sources properly—and avoid plagiarism—when writing their research papers. With his latest book, *Cite Right*, Lipson once again provides much-needed counsel in a concise and affordable handbook for students and researchers. Building on *Doing Honest Work in College*, Lipson's new book offers a wealth of information on an even greater range of citation styles and details the intricacies of many additional kinds of sources. Lipson's introductory essay, *Why Cite*, explains the reasons it is so important to use citations—and to present them

accurately—in research writing. In subsequent chapters, Lipson explains the main citation styles students and researchers are likely to encounter in their academic work: Chicago; MLA; APA; CSE (biological sciences); AMA (medical sciences); ACS (chemistry, mathematics, and computer science); physics, astrophysics, and astronomy; Bluebook and ALWD (law); and AAA (anthropology and ethnography). His discussions of these styles are presented simply and clearly with examples drawn from a wide range of source types crossing all disciplines, from the arts and humanities to science, law, and medicine. Based on deep experience in the academic trenches, *Cite Right* is an accessible, one-stop resource—a must-have guide for students and researchers alike who need to prepare citations in any of the major disciplines and professional studies.

This accessible work is the first in more than seventy-five years to discuss the many roles of adrenaline in regulating the "inner world" of the body. David S. Goldstein, an international authority and award-winning teacher, introduces new concepts concerning the nature of stress and distress across the body's regulatory systems. Discussing how the body's stress systems are coordinated, and how stress, by means of adrenaline, may affect the development, manifestations, and outcomes of chronic diseases, Goldstein challenges researchers and clinicians to use scientific integrative medicine to develop new ways to treat, prevent, and palliate disease. Goldstein explains why a former attorney general with Parkinson disease has a tendency to faint, why young astronauts in excellent physical shape cannot stand up when reexposed to Earth's gravity, why professional football players can collapse and die of heat shock during summer training camp, and why baseball players spit so much. Adrenaline

and the Inner World is designed to supplement academic coursework in psychology, psychiatry, endocrinology, cardiology, complementary and alternative medicine, physiology, and biochemistry. It includes an extensive glossary.

Psychological Association (APA) Many scientists and engineers consider themselves poor writers or find the writing process difficult. The good news is that you do not have to be a talented writer to produce a good scientific paper, but you do have to be a careful writer. In particular, writing for a peer-reviewed scientific or engineering journal requires learning and executing a specific formula for presenting scientific work. This book is all about teaching the style and conventions of writing for a peer-reviewed scientific journal. From structure to style, titles to tables, abstracts to author lists, this book gives practical advice about the process of writing a paper and getting it published.

Fractures are a common finding in children and it is estimated that 2.1% of all children will suffer at least one fracture before the age of 16. With young children in particular, the question may arise if this is related to child abuse. The aim of this book is to help physicians involved in child abuse cases to interpret radiological

findings in light of the forensic circumstances under which they occurred. The authors present up-to-date literature related to the mechanisms underlying non-accidental cases of trauma. In this book not only the radiological findings in child-abuse are discussed, but more importantly, these findings are analyzed from a forensic perspective. Careful attention is paid to evidence regarding reported trauma mechanisms and their clinical outcome; for example, can a fall from a couch result in a femoral fracture, and if not, where is the supporting evidence?

As a pianist, Glenn Gould was both a showman and a high priest, an artist whose devotion to music was so great that he eschewed the distractions of live performance. That same combination of flamboyance and aesthetic rigor may be found in this collection of Gould's writings, which covers composers from Bach to Terry Riley, performers from Arthur Rubinstein to Petula Clark, and yields unfettered and often heretical opinions on music competitions, the limitations of live audiences, and the relationship between technology and art. Witty, emphatic, and

finely honed, *The Glenn Gould Reader* presents its author in all his guises as an impassioned artist, an omnivorous listener, and an astute and deeply knowledgeable critic. *The Glenn Gould Reader* abounds with the literary voice of one of the most extraordinary musical talents of our time. Whether Gould's subject is Boulez, Stokowski, Streisand, or his own highly individual thoughts on the performance and creation of music, the reader will be caught up in his intensity, intelligence, passion and devotion. For those who never knew him, this book will be a particular treasure as a companion to his recordings and as the delicious discovery of a new friend.
