Biomarkers of Oxidative Stress Frontiers Media SA

Written with pace, humor and startling literary allusion, Lilian Faschinger's novel is the story of the sensual Magdalena, who, disguised in a nun's habit, kidnaps a priest at gunpoint and drives him in the sidecar of her Puch motorbike to a remote forest clearing where she ties him to a tree. What she is about to confess to him is profoundly shocking: All Magdalena wanted was to find true love. What she found instead was a string of lovers who each made the fatal mistake of disappointing her. From a Latin dance instructor who uses a metronome to help him keep

his rhythm in bed to a Ukrainian who plays mental chess games at the gravesite of former grandmaster Alexander Alekhine, Magdalena's men all lost their lives when they no longer satisfied her; perishing by her hand through poison, drowning and incineration. A head-on collision between Church and sex, Magdalena the Sinner interweaves highly charged erotica with modern views on Catholicism, feminism and the tensions between men and women.

Atlas of Echocardiography John Wiley & Sons

Since Dr. Brizendine wrote *The Female Brain* ten years ago, the response has been overwhelming. This New York Times bestseller has been translated into more than thirty languages, has sold nearly a million copies between editions, and has most recently inspired a romantic comedy starring Whitney Cummings and Sofia Vergara. And its profound scientific understanding of the nature and experience of the female brain continues to guide women as they pass through life stages, to help men better understand the girls and women in their lives, and to illuminate the delicate emotional machinery of a love relationship. Why are women more verbal than men? Why do women remember details of fights that men can't remember at all? Why do women tend to form deeper bonds with their female friends than men do with their male counterparts? These and other questions have stumped both sexes throughout the ages. Now, pioneering neuropsychiatrist Louann Brizendine, M.D., brings together the latest findings to show how the unique structure of the female brain determines how women think, what they value, how they communicate, and who they love. While doing research as a medical student at Yale and then as a resident and faculty member at Harvard, Louann Brizendine discovered that almost all of the clinical data in existence on neurology, psychology, and neurobiology focused exclusively on males. In response to the overwhelming need for information on the female mind, Brizendine established the first clinic in the country to study and treat women's brain function. In *The Female Brain*, Dr. Brizendine

distills all her findings and the latest information from the scientific community in a highly accessible book that educates women about their unique brain/body/behavior. The result: women will come away from this book knowing that they have a lean, mean, communicating machine. Men will develop a serious case of brain envy.

Vitamin D deficiency, circulating levels lower than 15 ng/ml, is an epidemic disease worldwide with more than a billion people suffering of it in the beginning of the 21-century. Besides its impact on mineral and bone metabolism, these low vitamin D levels are also associated with a diversity of non-skeletal complications, among them cardiovascular disease, diabetes mellitus, multiple sclerosis, cancer, tuberculosis, and immune system dysfunction. Chronic Kidney Disease is also a very common disease, affecting more than 10% of the world

population, ranging from stage 1 to stage 5 before dialysis.

Approximately 1% of the population in industrialized countries is affected by end-stage renal disease (ESRD), needing a renal replacement therapy either hemodialysis or peritoneal dialysis, and ultimately by renal transplantation. Those CKD patients are more susceptible to exhibit reduced vitamin D stocks.

Consequently, more than eighty percent of CKD patients have either insufficient or deficient vitamin D levels for multiple reasons.

The Big Green Tent epitomizes what we think of when we imagine the classic Russian novel. With epic breadth and intimate detail, Ludmila Ulitskaya's remarkable work tells the story of three school friends who meet in Moscow in the 1950s and go on to embody the heroism, folly, compromise, and hope of the Soviet dissident experience. These three boys—an orphaned poet; a gifted, fragile pianist; and a budding photographer with a talent for collecting secrets—struggle to reach adulthood in a society where their heroes have been censored and exiled. Rich with love stories, intrigue, and a cast of dissenters and spies, The Big Green Tent offers a panoramic survey of life after Stalin and a dramatic investigation into the prospects for individual integrity in a society defined by the KGB. Each of the central characters seeks to transcend an oppressive regime through art, a love of Russian literature, and activism. And each of them ends up face-to-face with a secret police that is highly skilled at fomenting paranoia, division, and self-betrayal. A man and his wife each become collaborators, without the other knowing; an artist is chased into the woods, where he remains in hiding for four years;

a researcher is forced to deem a patient insane, damning him to torture in a psychiatric ward. Ludmila Ulitskaya's novel belongs to the tradition of Dostoevsky, Tolstoy, and Pasternak: it is a work consumed with politics, love, and belief—and a revelation of life in dark times.

The present book contains the proceedings of the workshop "Plasma Technology and Applications" which was held at 11 Ciocco (Lucca-Italy) during 5-6 July 1991. The workshop was organized just before ICPIG XX to emphasize the role of plasma physics and plasma chemistry in different fields of technology. Topics cover different applications such as lamps, plasma treatment of materials (etching, deposition, nitriding), plasma sources (microwave excitation, negative ion sources) and plasma destruction of pollutants. Several chapters deal with basic concepts in plasma physics, non equilibrium plasma modeling and plasma diagnostics as well as with laser interaction with solid targets. The authors gratefully acknowledge the financial support provided by university of Bari (Italy) and by CNR (Centro di Studio per la Chimica dei Plasmi, Istituto di Fisica Atomica e Molecolare (IFAM) and Progetto Finalizzato Materiali Speciali per Tecnologie Avanzate) as well as the sponsorship of ENEA. Computed radiography is one of the most promising digital radiography techniques, and is expected to replace the conventional screen film radiography in the near future. This book is the first textbook on computed radiography written by Japanese authors and describes basic technologies and clinical results obtained at various hospitals. There are more than 60 CR systems working in clinical environments in Japan. However, as yet there are not so many systems working outside Japan. This book is, therefore, a good introduction to the new technology and practice of the CR system all over the world.
