Companies today are operating in a more complex and competitive environment where traditional models for doing business are no longer

sufficient and expectations of business are growing both internally and externally. Many companies have long and robust histories of contributing to their communities as well as to more global societal needs, but this has been done primarily and historically through philanthropy and more traditional corporate social responsibility. However, companies are increasingly seeking greater alignment of these activities with their business interests in order to increase their value proposition. These same companies are also under increased pressure to build their

business in a sustainable manner through innovative approaches. The National Academies of Sciences, Engineering, and Medicine convened a workshop to explore the concept of shared value for global health and safety stakeholders in both the public and private sectors; roles, responsibilities, incentives, and opportunities for different stakeholders engaging in global health and safety initiatives in low- and middle-income countries; and the potential of partnerships and collaboration for improved outcomes for all stakeholders, including the communities they serve. Participants considered potential opportunities for creating shared value for all organizations, specifically the creation and impact of shared value through an

organization's core products and services, through employee health and wellness programs, and through community or population health investments. This report summarizes the presentations and discussions from the workshop.

In many countries the regulation of health and safety at work underwent a new turn in the 1970s and 80s. This book brings together research that reviews the coverage and effectiveness of the consequent arrangements for worker representation on health and safety that exist in the EU generally,

within this specifically in the UK, Spain, France and Sweden, and beyond this in Australia, Canada and the Baltic States. It examines the effectiveness of these arrangements in different countries and how they operate in different sectors and in organisational of different size. It also considers in some detail the conditions that support or constrain these arrangements in different countries, which are generally found wanting, and especially the impact upon them of major political and economic changes in recent years.

International health security (IHS) is a broad and highly heterogeneous area. Within this general context, IHS

encompasses subdomains that potentially influence (and more specifically endanger) the well-being and wellness of humans. The general umbrella of IHS includes, but is not limited to, natural disasters, emerging infectious diseases (EID) and pandemics, rapid urbanization, social determinants of health, population growth, systemic racism and discrimination, environmental matters, civilian violence and warfare, various forms of terrorism, misuse of antibiotics, and the misuse of social media. The need for this expanded definition of health security stems from the realization that topics such as EID; food, water, and pharmaceutical supply chain safety; medical and health information cybersecurity; and bioterrorism, although important within

the overall realm of health security, are not only able to actively modulate the wellness and health of human populations, but also tend to do so in a synergistic fashion. This inaugural tome of a multi-volume collection, Contemporary Developments and Perspectives in International Health Security, introduces many of the topics directly relevant to modern IHS theory and practice. This first volume provides a solid foundation for future installments of this important and relevant book series.

*Global Occupational Safety and Health Management Handbook* Routledge

As the title *Safety or Profit?* suggests, health and safety at work needs to be understood in the context of the wider political economy. This book brings together contributions informed by this view from internationally recognized scholars. It reviews the governance of health and safety at work, with special reference to Australia, Canada, Sweden, and the United Kingdom. Three main aspects are discussed. The restructuring of the labor market: this is considered

with respect to precarious work and to gender issues and their implications for the health and safety of workers. The neoliberal agenda: this is examined with respect to the diminished power of organized labor, decriminalization, and new governance theory, including an examination of how well the health-and-safety-at-work regimes put in place in many industrial societies about forty years ago have fared and how distinctive the recent emphasis on self-regulation in several countries really is. The role of evidence: there is a dearth of evidence-based policy. The book examines how policy on health and safety at work is formulated at both company and state levels. Cases considered include the scant regard paid to evidence by an official inquiry into future strategy in

Canada; the lack of evidence-based policy and the reluctance to observe the precautionary principle with respect to work-related cancer in the United Kingdom; and the failure to learn from past mistakes in the Deepwater Horizon disaster in the Gulf of Mexico.
