*Teaching Evidence-Based Practice in Nursing* RTI Press

Winner of the 2017 AESA Critic's Choice Book Award This book provides multiple perspectives on the dual struggle that teacher educators currently face as they make sense of edTPA while preparing their pre-service teachers for this high stakes teacher exam. The adoption of nationalized teacher performance exams has raised concerns about the influence of corporate interests in teacher education, the objectivity of nationalized teaching standards, and ultimately the overarching political and economic interests shaping the process, format, and nature of assessment itself. Through an arc of scholarship from various perspectives, this book explores a range of questions about the goals and interests at work in the roll out of the edTPA assessment and gives voice to those most affected by these policy changes, teacher educators, and teacher education students.

In the recently updated Diagnostic and Statistical Manual of Mental Disorders (DSM-5), the diagnostic concept of hypochondriasis was eliminated and replaced by somatic symptom disorder and illness anxiety disorder. *Hypochondriasis and Health Anxiety: A Guide for Clinicians*, edited by Vladan Starcevic and Russell Noyes and written by prominent clinicians and researchers in the field, addresses current issues in recognizing, understanding, and treating hypochondriasis. Using a pragmatic approach, it offers a wealth of clinically useful information. The book also provides a critical review of the underlying conceptual and treatment issues, addressing varying perspectives and synthesizing the current research. Specific topics the text covers include: clinical manifestations, diagnostic and conceptual issues, classification, relationships with other disorders, assessment, epidemiology, economic aspects, course, outcome and treatment. Additionally, the book discusses patient-physician relationship in the context of hypochondriasis and health anxiety and presents cognitive, behavioral, interpersonal and psychodynamic models and treatments. The authors also address the neurobiological underpinnings of hypochondriasis and health anxiety and pharmacological treatment approaches. Based on the extensive clinical experience of its authors, there are numerous case illustrations and practical examples of how to assess, understand and manage individuals presenting with disease preoccupations, health anxiety and/or beliefs that they are seriously ill. It approaches its subject from various perspectives and is a work of integration and critical thinking about an area often shrouded in controversy.

*Research in Young Children's Literacy and Language Development* Allyn & Bacon

The assessment of young children's development and learning has recently taken on new importance. Private and government organizations are developing programs to enhance the school readiness of all young children, especially children from economically disadvantaged homes and communities and children with special needs. Well-planned and effective assessment can inform teaching and program improvement, and contribute to better outcomes for children. This book affirms that assessments can make crucial contributions to the improvement of children's well-being, but only if they are well designed, implemented effectively, developed in the context of systematic planning, and are interpreted and used appropriately. Otherwise, assessment of children and programs can have negative consequences for both. The value of assessments therefore requires fundamental attention to their purpose and the design of the larger systems in which they are used. Early Childhood Assessment addresses these issues by identifying the important outcomes for children from birth to age 5 and the quality and purposes of different techniques and instruments for developmental assessments.

*Kindergarten Reading Readiness* Oxford University Press

The second edition of this internationally acclaimed title is the

ideal handbook for those involved in conducting epidemiological research. The objective of most epidemiological studies is to relate exposure to putative causal agents to the occurrence of a particular disease. The achievement of this objective depends critically on accurate measurement of exposure. This book reviews principles and techniques that can be applied to measuring a wide range of exposures, including demographic, behavioral, medical, genetic, and environmental factors. The book covers questionnaire design, conducting personal interviews, abstracting information from medical records, use of proxy respondents, and measurements from human specimens and in the environment. It gives a comprehensive account of measurement error and the estimation of its effects, and the design, analysis, and interpretation of validity and reliability studies. Emphasis is given to the ways in which the validity of measurements can be increased. Techniques to maximize participation of subjects in epidemiological studies are discussed, and ethical issues relevant to exposure measurement are outlined.

National efforts have been made to encourage technology integration in teacher preparation with expectations for frequent and successful applications with K-12 learners. While online learning has become pervasive in many fields in education, it has been somewhat slow to catch on in K-12 settings. The Handbook of Research on Emerging Practices and Methods for K-12 Online and Blended Learning is a collection of innovative research on the applications of technology in online and blended learning environments in order to develop quality courses, explore how content is delivered across disciplines and settings, and support the formation of relationships and enrichment opportunities. While highlighting topics including learning initiatives, institutional policies, and program structures, this book is ideally designed for teachers, principals, early childhood development centers, university faculty, administrators, policymakers, researchers, and practitioners.

For many years, the need to develop valid tools to evaluate signs and symptoms of Parkinson Disease (PD) has been present. However the understanding of all intricacies of rating scales development was not widely available and the first attempts were relatively crude. In 2002, the Movement Disorders Society created a task force to systemize the measurement of Parkinson's Disease. Since then, the Task Force has produced and published several critiques to the available rating scales addressing both motor and non-motor domains of Parkinson Disease. Additionally the task force initiated a project to develop a new version of the UPDRS, the MDS-UPDRS. But none of this was made available in one convenient source. Until now. Rating Scales in Parkinson's Disease is written for researchers from the medical and social sciences, and for health professionals wishing to evaluate the

progress of their patients suffering from Parkinson Disease. The book is both exhaustive in the description of the scales and informative on the advantages and limitations of each scale. As such, the text clearly guides readers on how to choose and use the instruments available. Extensive cross-referenced tables and charts closely integrate the parts of the book to facilitate readers in moving from one symptom domain to another.

Content Analysis offers a comprehensive overview of the variation within content analysis, along with detailed descriptions of three approaches found in the contemporary literature: basic content analysis, interpretive content analysis and qualitative content analysis. This book provides an inclusive, and carefully differentiated, examination of contemporary content analysis research purposes and methods. Such a book is not currently available. Chapter One examines the conceptual base and history of content analysis, then the next three chapters examine each approach to content analysis in depth, using brief illustrative exemplar studies. Each of the methodology chapters employs a consistent outline to help readers compare and contrast the three different approaches. Chapter 5 examines rigor in content analysis and highlights steps to ensure the internal coherence of studies. This book concludes with exploration of two full-length studies: Chapter 6 examines the use of content analysis for advocacy and building public awareness to promote human rights and social justice. Chapter 7 reviews a full-length study of older adults in prison to detail how content analysis is completed and how different approaches may be usefully combined.

*Research-based Principles for Adult Basic Education Reading Instruction* Springer Science & Business Media

This book provides cutting-edge, evidence-based strategies and interventions that target students' engagement at school and with learning. Coverage begins with the background and 29-year history of the Check & Connect Model and describes the model and assessment of student engagement that served as the backdrop for conceptualizing the engagement interventions described in the book. Subsequent chapters are organized around the subtypes of student engagement - academic, behavioral, affective, cognitive - that were developed based on work with the Check & Connect Model. Principles and formal interventions are presented at both the universal and more intensive levels, consistent with the Response-to-Intervention/Multi-Tiered System of Support (MTSS) framework. The book concludes with a summary on the lessons learned from Check & Connect and the importance of a system that is oriented toward enhancing engagement and school completion for all students. The importance of the early years in young children's lives and the rigid inequality in literacy achievement are a stimulating backdrop to current research in young children's language and literacy development. This book reports new data and empirical analyses that advance the theory of language and literacy, with researchers using different methodologies in conducting their study, with both a sound empirical underpinning and a captivating analytical rationalization of the results. The contributors to this volume used several methodological methods (e.g. quantitative, qualitative) to describe the complete concept of the study; the achievement of the study; and the study in an appropriate manner based on the study's methodology. The contributions to this volume cover a wide range of topics, including dual language learners; Latino immigrant children; children who have hearing disabilities; parents' and teachers' beliefs about language development; early literacy skills of toddlers and preschool children; interventions; multimodalities in early literacies; writing; and family literacy. The studies were conducted in various early childhood settings such as child care, nursery school, Head Start, kindergarten, and primary grades, and the subjects in the studies represent the pluralism of the globe - a pluralism of language, backgrounds, ethnicity, abilities, and disabilities. This book was originally published as a special issue of *Early Child Development and Care*.

Narrative inquiry examines human lives through the lens of a narrative, honoring lived experience as a source of important

knowledge and understanding. In this concise volume, D. Jean Clandinin, one of the pioneers in using narrative as research, updates her classic formulation on narrative inquiry (with F. Michael Connelly), clarifying, extending and refining the method based on an additional decade of work. A valuable feature is the inclusion of several exemplary cases with the author's critique and analysis of the work. The rise of interest in narrative inquiry in recent years makes this is an essential guide for researchers and an excellent text for graduate courses in qualitative inquiry.
